The Ministry of Industry and Information Technology issued the "Guiding Opinions on Orderly Promoting the Reopening of Industrial and Communications Enterprises" (Ministry of Industry and Information Technology Politics and Law [2020] No. 29)

To the competent departments of industry and information technology of each province, autonomous region, municipality directly under the Central Government, city with independent planning status, and Xinjiang Production and Construction Corps:

In order to thoroughly implement General Secretary Xi Jinping's important instructions on coordinating the prevention and control of the new coronavirus pneumonia and economic and social development, and implement the requirements of the State Council's Joint Prevention and Control Mechanism's "Notice on Effectively Strengthening Scientific Epidemic Prevention and Control and Orderly Reopening of Enterprises", on the premise of ensuring that epidemic prevention and control are in place, we will promote the resumption of work and production of enterprises in non-key epidemic prevention and control areas, and strive to achieve this year's industrial

communications industry development goals and tasks. The following opinions are put forward.

I. General requirements

Guided by Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era, we should strengthen the "four consciousnesses", strengthen the "four self-confidences", and achieve the "two safeguards". We should implement the decisions and arrangements of the CPC Central Committee and the State Council in a down-to-earth and detailed manner, and coordinate the prevention and control of the epidemic and economic and social development. We should focus on key points, coordinate and balance, provide classified guidance, and implement policies in different regions. We should strengthen the coordination of the industrial chain, make full use of the new generation of information technology, and fully support the scientific prevention and control of the epidemic and the resumption of work and production of enterprises. We should resolutely put an end to formalism and bureaucracy in the prevention and control of the epidemic and the resumption of work and production of enterprises, take the initiative, take positive actions, go deep into the grassroots, serve enterprises, and implement various measures in a down-to-earth and detailed manner, solve practical difficulties for the grassroots, and effectively help enterprises to resume work and production.

2. Make every effort to ensure the supply of medical protective materials

We must make the supply of epidemic prevention and control materials the top priority of our current work, focus on organizing the production and timely supply of medical equipment and therapeutic drugs such as ventilators and ECG monitors that are urgently needed for medical treatment, comprehensively improve the production and supply capacity of protective materials such as medical protective clothing and masks, coordinate the simultaneous resumption of work and production of companies across the entire medical supplies industry chain, enhance corporate production flexibility, scientifically plan production capacity, ensure product quality, strengthen material support coordination mechanisms, and provide strong and powerful material support for winning the defense of Hubei and Wuhan, and for the overall victory of epidemic prevention and control across the country.

3. Effectively help enterprises to do a good job in epidemic prevention and control

Guide enterprises to implement the "Guidelines for Epidemic Prevention and Control Measures for the Reopening of Enterprises and Institutions", supervise the implementation of epidemic prevention and control measures, do a good job in ventilation, disinfection, temperature detection and other prevention and control work, establish necessary sanitary facilities, strengthen employee health

monitoring, strengthen daily prevention and control management, and prevent clustered epidemics. Use new-generation information technologies such as big data and artificial intelligence to track and monitor enterprises that have resumed work and production, and implement a zero-report system for epidemic prevention and control. We must put an end to formalistic practices such as "filling out forms to fight the epidemic" and "showing off and leaving traces" and effectively solve the actual problems of enterprises.

IV. Increase support for small and medium-sized enterprises

In accordance with the requirements of the Notice of the Ministry of Industry and Information Technology on Responding to the Novel Coronavirus Pneumonia Epidemic and Helping Small and Medium-sized Enterprises Resume Work and Production to Overcome Difficulties (Industry and Information Technology Notice [2020] No. 14), guide enterprises to make good use of existing preferential policies such as finance, taxation, and social security. Continue to study and introduce phased and targeted tax and fee reduction policies to help small, medium and micro enterprises overcome difficulties. Encourage leading enterprises such as central enterprises and large state-owned enterprises to play a leading role, help small and medium-sized enterprises to carry out accounts receivable financing, drive the resumption of work and production of

small and medium-sized enterprises upstream and downstream of the industrial chain, and coordinate epidemic prevention and control and production recovery. In response to the outstanding problem of insufficient cash flow of small and medium-sized enterprises, implement financial support policies to help enterprises alleviate financing difficulties. Continue to increase efforts to promote the clearing of arrears of accounts owed to private enterprises and small and medium-sized enterprises to alleviate the financial pressure of enterprises.

5. Accelerate the resumption of work and production of enterprises producing daily necessities

Accelerate the resumption of work and production of agricultural enterprises such as fertilizers, agricultural films, complete agricultural machinery and equipment, and spare parts, ensure the supply of materials for spring ploughing and preparation, and ensure that agricultural production does not miss the farming season. Promote the resumption of work and production of food, daily necessities and other daily necessities enterprises to ensure a stable supply of people's livelihood materials. Make full use of e-commerce, information services and other platforms to promote online docking of supply and demand in the industrial chain, and encourage online maintenance of agricultural machinery and other equipment.

VI. Promote the resumption of work and production of enterprises in key industries

Priority will be given to supporting industries with long industrial chains and strong driving capabilities, such as automobiles, electronics, ships, aviation, power equipment, and machine tools. Continue to support industries such as smart photovoltaics and lithium-ion batteries, as well as single champions in the manufacturing industry, to consolidate the competitive advantages of the industrial chain. Focus on supporting strategic emerging industries such as 5G, industrial Internet, integrated circuits, industrial robots, additive manufacturing, intelligent manufacturing, new display, new energy vehicles, energy conservation and environmental protection. Vigorously enhance the supporting capabilities of supporting industries such as food packaging materials, auto parts, core components, and key electronic materials.

VII. Promote the start and resumption of major projects

Actively expand domestic effective demand, give play to the demonstration and driving role of major projects and key engineering construction, speed up the construction progress of ongoing and newly started projects, and drive the resumption of work and production of engineering machinery, raw materials and other enterprises and the return of personnel to work. In light of the actual situation in the region, focus on key directions such as people's livelihood employment, industrial basic capabilities, and future industrial competition commanding

heights, and launch a number of major projects and key projects with large investment scales and strong driving capabilities. Coordinate to solve the problems encountered in the resumption of work and production of major foreign-funded projects and promote the implementation of major foreign-funded projects.

8. Vigorously promote the improvement of market consumption quality and expansion of market consumption

Support new business forms and models, enrich application scenarios such as 5G+, ultra-high-definition video, augmented reality/virtual reality, promote the development of telemedicine, online education, digital science, online office, collaborative work, service robots, etc., and drive the consumption of smart terminals. Actively stabilize traditional bulk consumption such as automobiles, encourage areas with automobile purchase restrictions to appropriately increase automobile license plate quotas, and drive the consumption of automobiles and related products. Increase investment in large health industries such as biomedicine, intelligent health management equipment, high-end medical devices, medical robots, and public health intelligent monitoring and detection systems to meet the health needs of the people.

9. Clear the bottlenecks of people and logistics

Implement precise prevention and control strategies based on zoning and grading, ensure the orderly flow of

personnel and smooth logistics, and promote the coordinated resumption of work and production in all links of the industrial chain. Guide enterprises to make good use of policies to support enterprises and stabilize employment, give full play to the advantages of information technology, actively carry out precise docking, coordinate to open up channels for employees to return to work, and increase the return rate of employees. Actively connect with relevant departments, and include production materials, parts, and products of key industries and key enterprises into green logistics channels to ensure smooth transportation. Build a cross-regional personnel and material docking platform, provide precise services, coordinate and solve problems such as the return of personnel and transportation of production materials in enterprises in parks and industrial clusters, and promote enterprises to resume production in groups.

10. Strengthening classified guidance

For low-risk areas, relevant prevention and control measures should be implemented, procedures should be simplified, services should be strengthened, enterprises should be guided to resume work and production, and normal production and living order should be fully restored; for medium-risk areas, enterprises should be reasonably arranged to resume work and production on the premise of good epidemic prevention and control, and normal production and living order should be restored as soon as possible and

in an orderly manner; for high-risk areas, we should continue to focus on epidemic prevention and control, and gradually restore production and living order according to the epidemic situation. We should select outstanding cadres to go to the front line, provide follow-up services to key enterprises, and guide them to resume work and production.
