

Some of the world's most iconic golf courses are shifting to unmanned mowing

Find out how Kress is redefining turf maintenance worldwide.

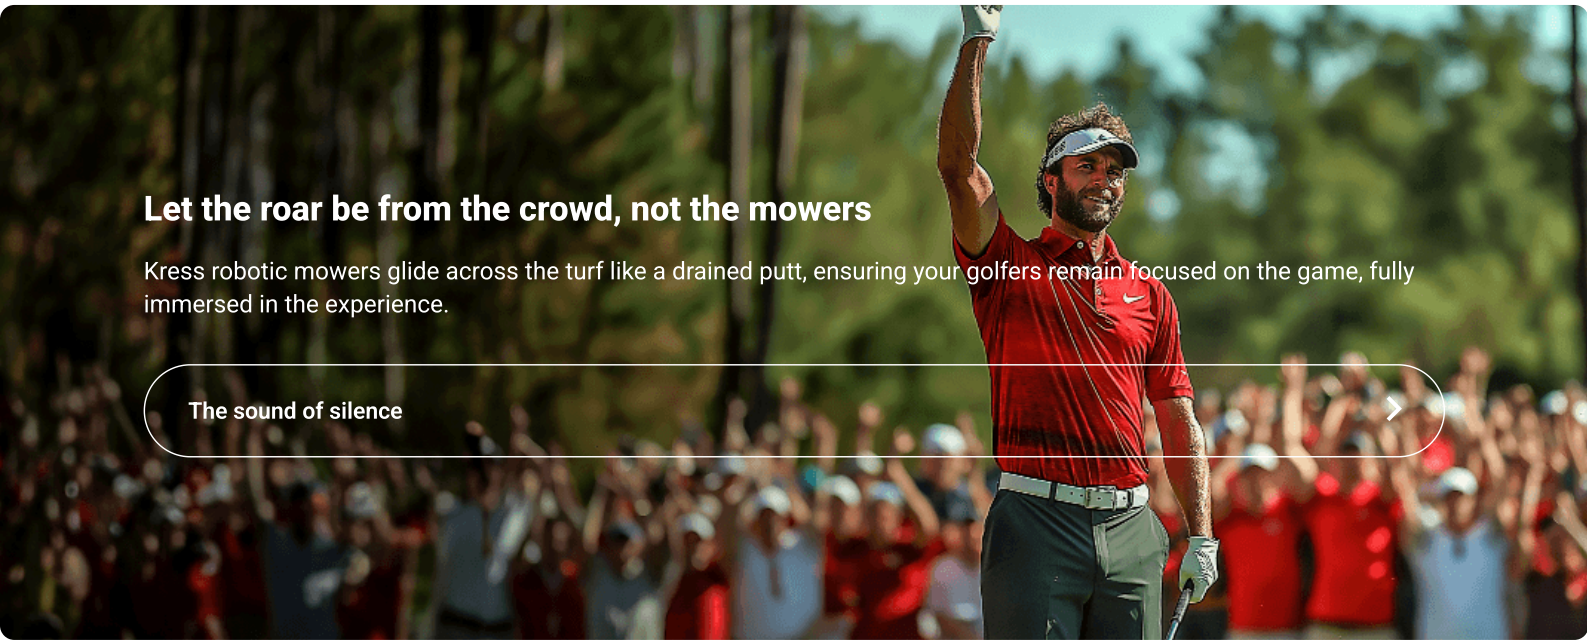

Book a consultation

Free your staff for what matters more

Stop assigning your skilled landscapers to endless hours of mowing. Let Kress Robotics handle the routine, so your team can focus on perfecting every detail of your course.

Find a dealer near you

Let the roar be from the crowd, not the mowers

Kress robotic mowers glide across the turf like a drained putt, ensuring your golfers remain focused on the game, fully immersed in the experience.

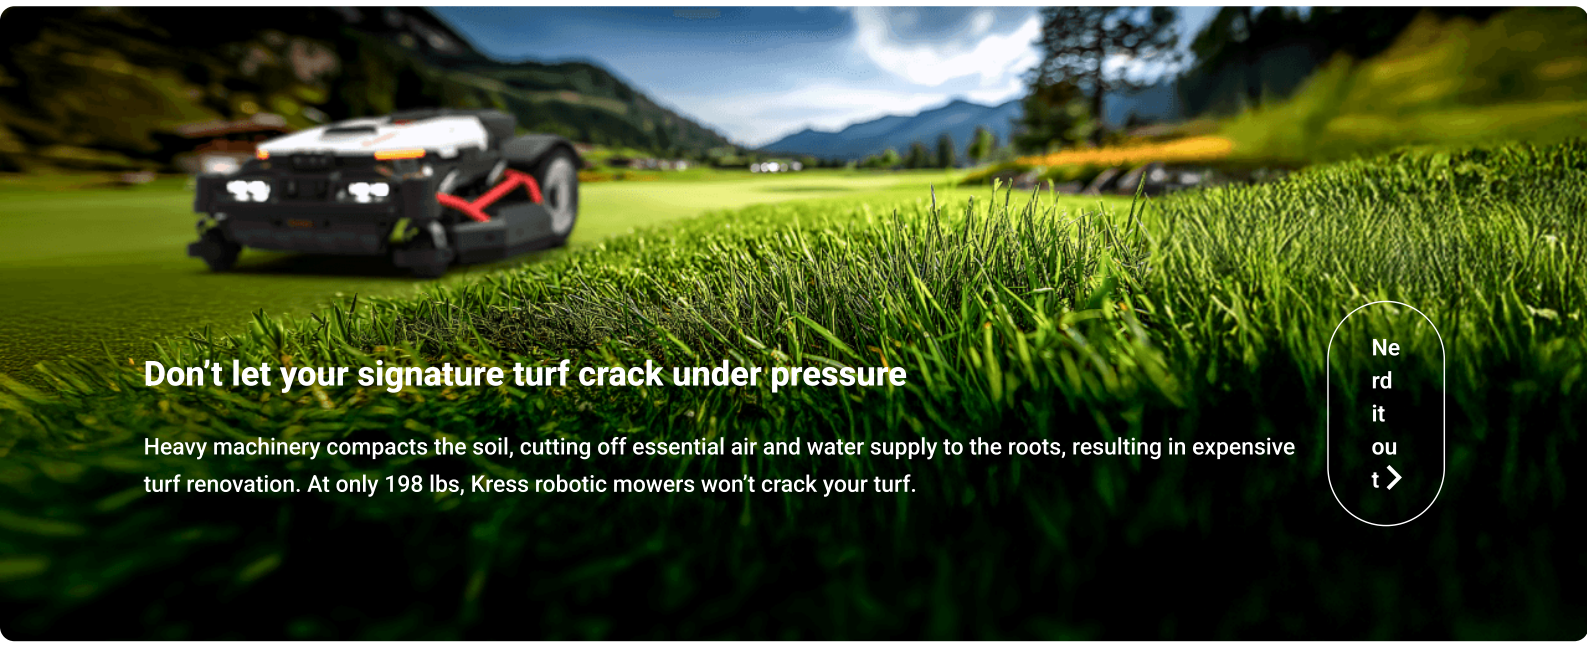

The sound of silence

No matter the weather

Rain or shine, Kress robotic mowers are engineered to ensure superior traction even in wet or cold conditions, where massive tractor tires would slip.

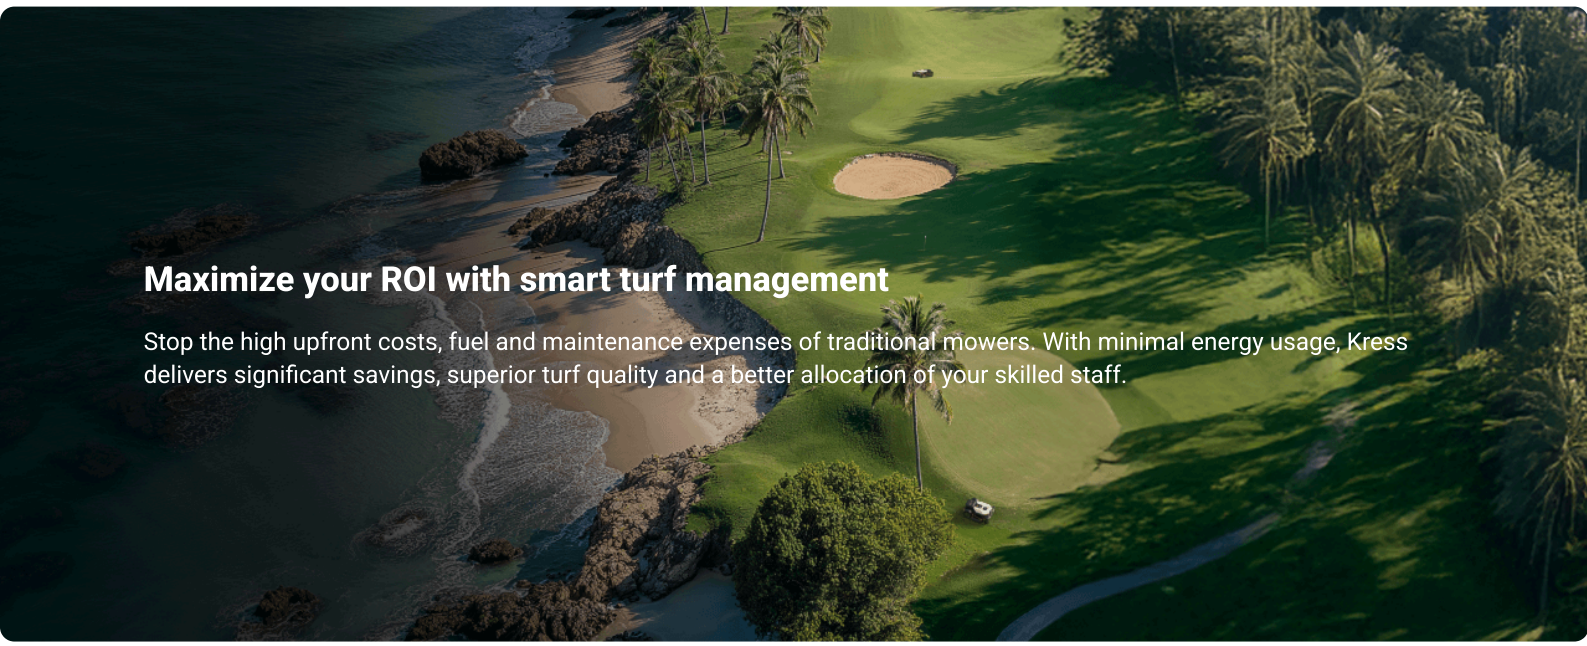

Explore the physics behind it

Don’t let your signature turf crack under pressure

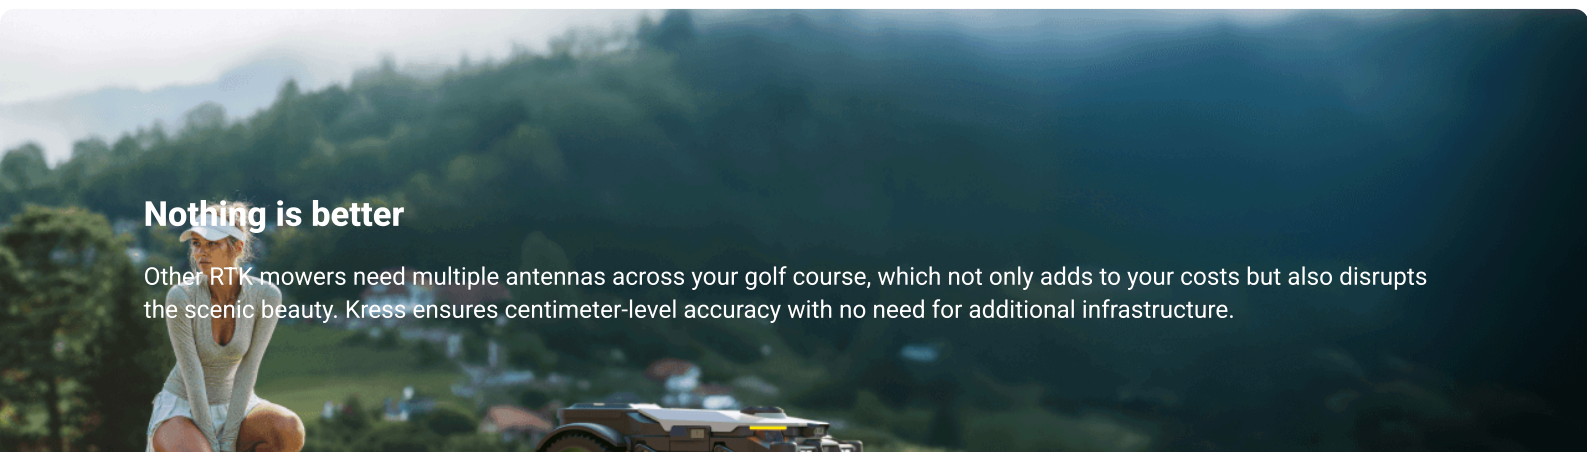

Heavy machinery compacts the soil, cutting off essential air and water supply to the roots, resulting in expensive turf renovation. At only 198 lbs, Kress robotic mowers won’t crack your turf.

Maximize your ROI with smart turf management

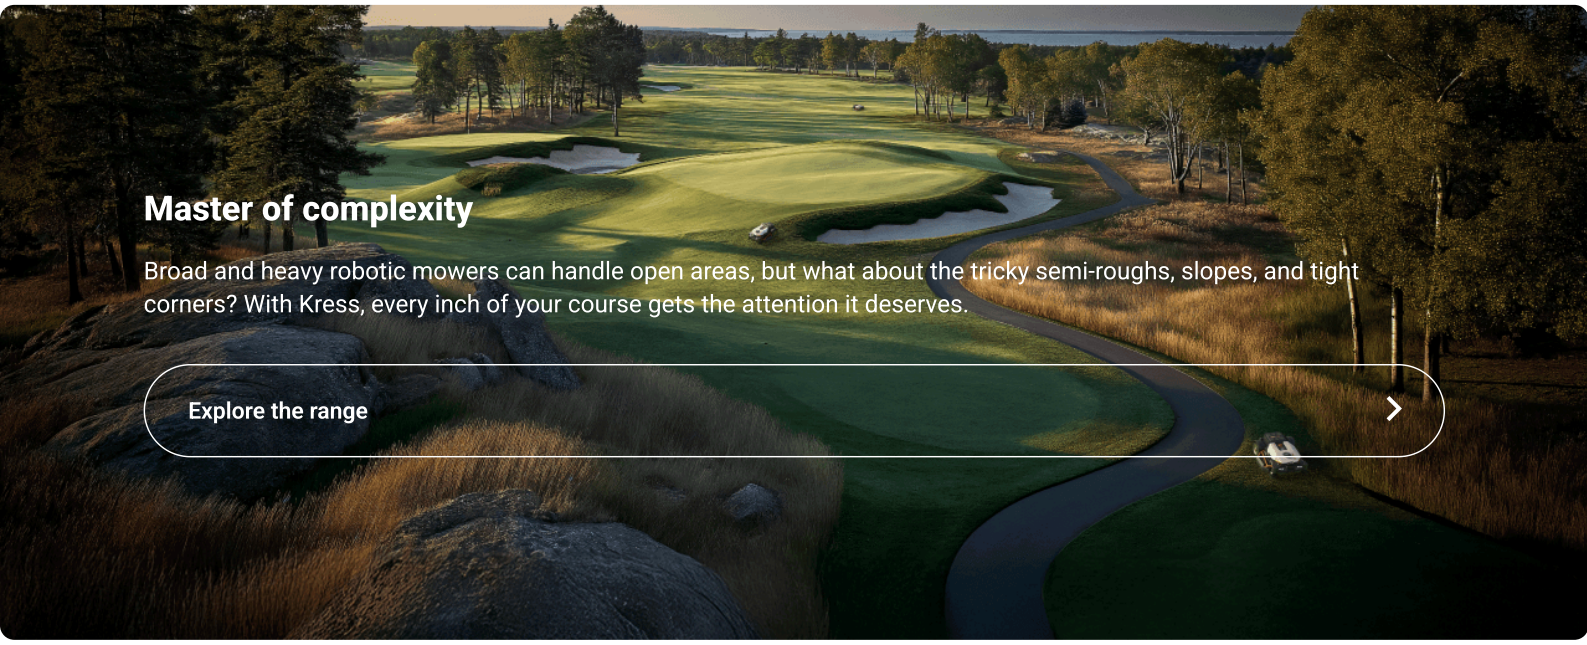

Stop the high upfront costs, fuel and maintenance expenses of traditional mowers. With minimal energy usage, Kress delivers significant savings, superior turf quality and a better allocation of your skilled staff.

Nothing is better

Other RTK mowers need multiple antennas across your golf course, which not only adds to your costs but also disrupts the scenic beauty. Kress ensures centimeter-level accuracy with no need for additional infrastructure.

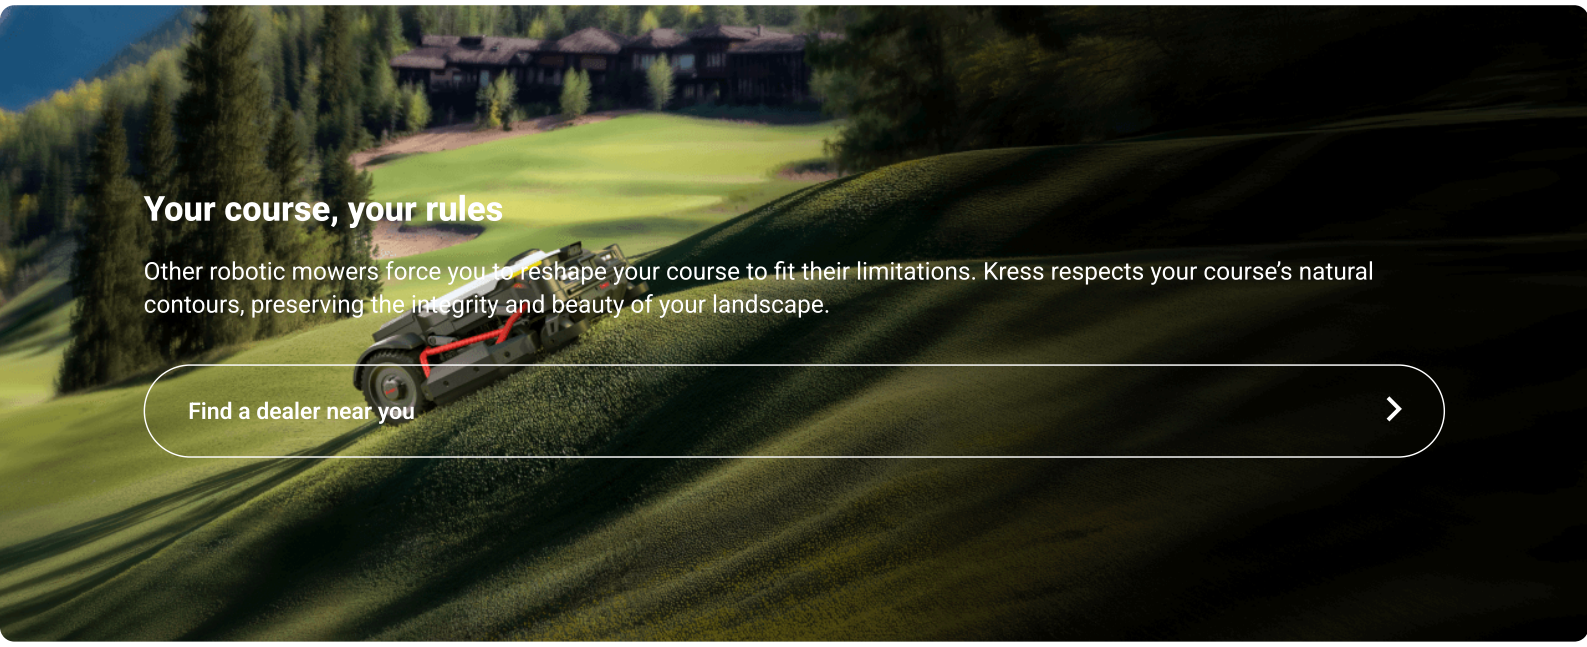

Explore the edge

Master of complexity

Broad and heavy robotic mowers can handle open areas, but what about the tricky semi-roughs, slopes, and tight corners? With Kress, every inch of your course gets the attention it deserves.

Explore the range

Your course, your rules

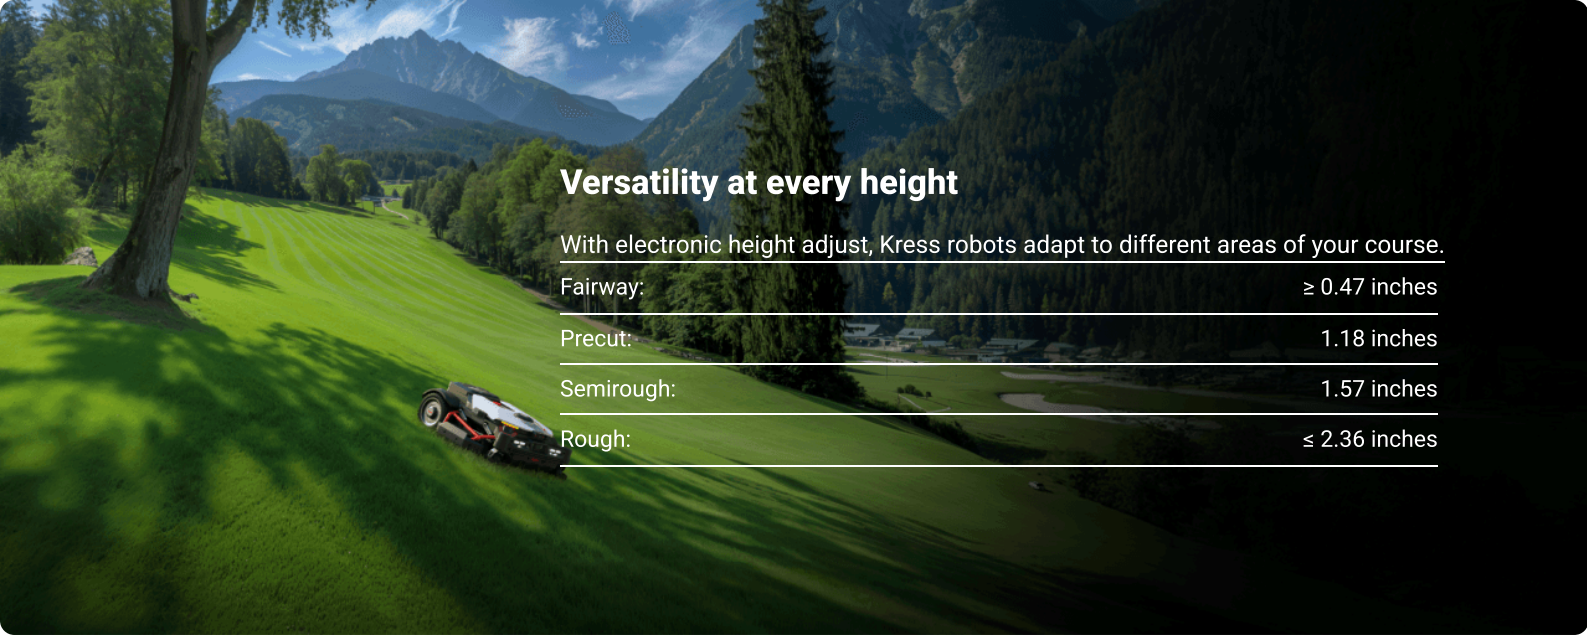

Other robotic mowers force you to reshape your course to fit their limitations. Kress respects your course's natural contours, preserving the integrity and beauty of your landscape.

Find a dealer near you

Two-holes-in-one

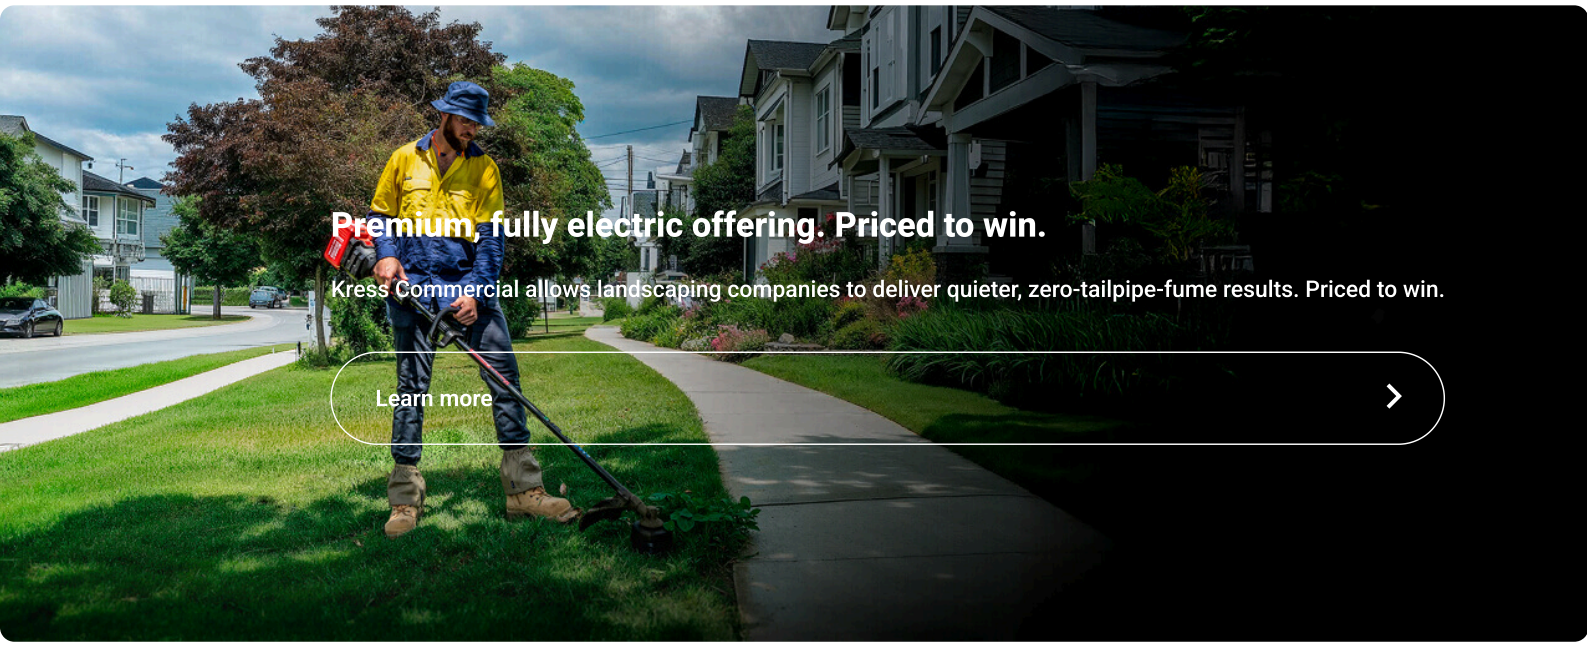

Switch to Kress mowing to reduce your carbon footprint and boost your environmental reputation. A win for your course, and the planet.

Versatility at every height

With electronic height adjust, Kress robots adapt to different areas of your course.

Fairway:	≥ 0.47 inches
Precut:	1.18 inches
Semirough:	1.57 inches
Rough:	≤ 2.36 inches

Premium, fully electric offering. Priced to win.

Kress Commercial allows landscaping companies to deliver quieter, zero-tailpipe-fume results. Priced to win.
