

Appendix 1

NON-CONFIDENTIAL

Percentage of E-PVC in HS Code 39041000

Both E-PVC and S-PVC (the imported goods) are normally imported into the UK market under HS Code 39041000. Appendix 1 provides an estimation of the percentage of E-PVC contained in the total imports under this code into the UK over the Injury Period. This estimation is based on market intelligence and Applicant data. It is therefore business confidential. By way of non-confidential summary the Appendix demonstrates that around [6% - 16%] of the total imports into the UK are E-PVC. The Applicant considers that the majority of E-PVC imported into the UK originates in the EU and thus, that almost 100% of the volumes reported by HMRC for imports originating in the US are S-PVC.

The Applicant has relied, throughout the Application, on the figures as reported by HMRC (including the estimates % of E-PVC). This is due to the business sensitivity of the underlying Applicant figures used to estimate the % of E-PVC out of the total PVC imports into the UK are highly confidential. The Applicant considers that the trends in market share over the Injury Period remain relatively similar regardless of whether the suspected % of E-PVC is removed.
