

Annex E.4: Injury margin (4 representative product types)

Non-Confidential version

This Annex includes business confidential information based on market intelligence gathered by the Complainant, which is not public and the disclosure of which would be of significant competitive advantage to a competitor.

This Annex includes a set of injury margins calculations based on the following data:

Sheet 1 – Injury margin for the four most representative product types (i.e., optical fibre cables containing 12, 36, 48 and 96 fibres).

Sheet 2 – Domestic and Export prices

Export price (CIF) is based on offer by the Chinese producer that the EU Complainants were able to locate.

Conclusion:

Over the investigation period (2021), the injury margins of the four representative product types are:

- **An optical fibre cable with 12 fibres : 48%**
- **An optical fibre cable with 36 fibres : 37%**
- **An optical fibre cable with 48 fibres : 44%**
- **An optical fibre cable with 96 fibres : 53%**
