[Integrity and Integrity of Longbai] Strong Partnership Forges New Chain, Joint Efforts for a New Journey – Longbai Group and DangSheng Technology Reach Long-Term Strategic Cooperation

Author: Date: 2026-08-11 [Return to List \(/mnews/10911\)](#)

To deepen strategic cooperation in the new energy industry and seize the development opportunities of lithium battery new materials, from August 2nd to 3rd, Xu Ran, Chairman of Longbai Group, led a delegation including Wang Xudong, Secretary of the Board of Directors, Yan Ming, General Manager of Henan Baili New Energy, and Liu Shihua, Chairman of Longbai Sichuan Mining and Metallurgy, to Panzhihua, Sichuan Province. They conducted special discussions with Dangsheng Technology and successfully reached a long-term strategic cooperation agreement, which will help extend, supplement, and strengthen the vanadium-titanium new energy industry chain.

Group Chairman Xu Ran and his delegation visited the Dang Sheng Shu Road site.

On August 2nd, Xu Ran, Chairman of the Group, and his delegation visited DangSheng Shudao New Materials Co., Ltd., participated in a strategic cooperation seminar, and toured the Panzhihua lithium iron phosphate production plant. During the seminar, both parties introduced their respective corporate development plans, production capacity layout, and core advantages. They also held in-depth discussions on specific matters such as a long-term raw material supply agreement and the joint construction of a research and development platform, reaching several consensuses and laying a solid foundation for the implementation of subsequent strategic cooperation.

**Strategic cooperation agreement
signing ceremony**

On August 3, the Panzhihua New Energy Industry Cooperation and Development Symposium and the Strategic Cooperation Signing Ceremony between Longbai Group and DangSheng Technology were successfully held. Fan Jiyue, Deputy Secretary of the Panzhihua Municipal Party Committee and Mayor; Deng Bin, Standing Committee Member of the Panzhihua Municipal Party Committee and Secretary of the Party Working Committee of the National Vanadium-Titanium High-tech Industrial Development Zone; Li Tangbing, Standing Committee Member of the Panzhihua Municipal Party Committee and Executive Vice Mayor; Liu Jianbo, Vice Mayor; Chen Yanbin, Chairman of DangSheng Technology; Li Hongfa, Board Secretary; Chen Xin, Chairman of DangSheng Shudao; Li Chengwei, Deputy Director of Procurement; Xu Ran, Chairman of Longbai Group; Wang Xudong, Board Secretary; Yan Ming,

General Manager of Henan Baili New Energy; and Liu Shihua, Chairman of Longbai Sichuan Mining and Metallurgy, attended the meeting. Yu Jinchuan, Deputy Secretary of the Panzhihua Municipal Party Committee and Minister of the Organization Department, presided over the ceremony. Following the symposium, Longbai Group and DangSheng Technology signed a strategic cooperation agreement. The two parties will deepen cooperation in raw material supply, joint research and development, capacity integration, and green manufacturing, connecting the green closed-loop industrial chain of "vanadium-titanium magnetite—titanium dioxide—ferrous sulfate—ferric phosphate—lithium iron phosphate," addressing the shortcomings in the new energy industry, and improving the regional industrial system.

Longbai Group has long been deeply involved in the comprehensive utilization of vanadium and titanium resources. Leveraging its unique resource advantage of ferrous sulfate, a byproduct of titanium dioxide production, it has expanded into the lithium battery new materials business. This synergy with DangSheng ShuDao, which is based in Panzhihua, forms a strong industrial complement, laying a solid foundation for this strategic

es

cooperation. According to the agreement, both parties will establish a long-term stable supply mechanism, jointly build a scientific research and innovation platform, integrate high-quality regional production capacity, jointly create a zero-carbon green industrial chain, and comprehensively improve the level of industrial synergy.

Xu Ran, Chairman of Longbai Group, delivered a speech.

At the symposium, Xu Ran, Chairman of Longbai Group, delivered a speech. She stated that Longbai Group has been deeply rooted in Panzhihua for over a decade, and the region has become a core and auspicious location for the Group's industrial layout in Southwest China. Longbai has a well-established titanium dioxide production capacity layout, and its by-product ferrous sulfate is a high-quality iron source for the preparation of ferric phosphate. Since the cooperation began in 2022, the supply scale between the two parties has increased

es

year by year, and in the future, they will strengthen their long-term supply guarantee capabilities through local expansion and capacity integration. Longbai and DangSheng are core strategic partners. Longbai possesses advantages in vanadium and titanium resources and integrated production capacity, while DangSheng has cutting-edge technology and global market channels. Their complementary attributes are prominent, and Longbai is committed to becoming DangSheng's top-tier raw material strategic supplier. Going forward, Longbai will promote three implementation measures: integrating local inefficient titanium dioxide production capacity and combining it with regional phosphate rock resources to build a complete titanium-lithium closed-loop industrial chain; relying on a high proportion of green electricity production model to create low-carbon differentiated competitiveness; and jointly tackling new battery materials, exploring models such as joint factory construction, strategic investment, and equity cooperation to build a mutually beneficial and win-win community. Xu Ran proposed that Longbai Group will use Panzhihua as a fulcrum to work with government and enterprise partners to create a world-class vanadium-titanium new energy industry ecosystem, and promote the

es

mutual empowerment and synergistic upgrading of the traditional titanium industry and the power battery industry.

Chen Yanbin, Chairman of DangSheng Technology, introduced the company's development, noting that the company's profits steadily increased in the first half of 2026, with lithium iron phosphate (LFP) business becoming a new growth highlight. The Panzhihua base is DangSheng Technology's first LFP production base, and its products possess advantages such as low energy consumption, long cycle life, and low cost. Chairman Chen fully recognized Longbai Group's supply capabilities and product quality, expressing hope that both parties will continue to deepen their cooperation across the entire supply chain to jointly expand and strengthen the regional vanadium-titanium lithium battery industry.

At the meeting, Chen Xin, Chairman of Dangsheng Shudao, and Yan Ming, General Manager of Henan Baili New Energy, exchanged views on industrial chain synergy and deepening pragmatic cooperation. They elaborated on the stable supply and demand cooperation relationship and the current status of capacity matching between the two parties, and made it clear that they will implement a long-term procurement agreement,

es

implement the "310 Strategy" to strive for the output value of 10 billion yuan, and rely on the existing 200,000-ton iron phosphate production capacity to consolidate the foundation of cooperation, extend in-depth cooperation in the fields of minerals and capital, and cultivate Panzhihua to promote the quality development of the new energy industry.

This strategic cooperation marks a new stage in the integrated development of Longbai Group's core titanium dioxide business and lithium battery new materials business. Next, Longbai Group will leverage the industrial advantages of Panzhihua to accelerate the construction of projects such as chlorinated titanium dioxide and rare and precious metal recycling, continuously improving the titanium-phosphorus-lithium circular industrial chain. Utilizing local policy support and the synergistic advantages of leading enterprises, both parties will expedite the implementation and effectiveness of cooperative projects, transforming Panzhihua's vanadium-titanium resource advantages into industrial competitive advantages. They will focus on building a globally competitive vanadium-titanium power battery new materials industrial cluster, promoting the steady growth of Longbai's new

energy sector, and injecting new momentum into the company's high-quality and sustainable development.
