[Interpretation] Policy Interpretation of the "Shanghai Administrative Measures for Supporting the Promotion and Application of Biodiesel Made from Waste Kitchen Grease"

(February 08, 2021)

1. What is the main basis for this revision?

In May 2018, the General Office of the Municipal Government issued the "Shanghai Interim Management Measures for Supporting the Promotion and Application of Biodiesel from Waste Kitchen Oils" (hereinafter referred to as the "Interim Measures"), which effectively promoted the full-process resource utilization of waste kitchen oils and fats. The whole process system is continuously improved and stabilized to effectively solve the problem of "gutter oil" flowing back to the table, ensure food safety, and promote resource recycling. However, the promotion and application work has also encountered some difficulties: First, the price of raw oil collection remains high, and the production cost of biodiesel is high. Second, the promotion and application of B5 biodiesel has encountered a bottleneck period and mainly relies on oil price concessions. Third, the recognition of biodiesel is not high. Therefore, we believe that it is necessary to implement another round of promotion and application policies to maintain the stable operation of the entire biodiesel production process system from kitchen waste grease.

2. What are the main contents of this revision?

The new round of support policies will continue to maintain the original B5 biodiesel promotion and application support system unchanged, and continue to use the subsidy methods, standards and upper limits in the "Interim Measures".

Regarding the subsidy system, the price of raw oil remains market-based (the Municipal Greening and City Appearance Bureau coordinates the purchase price based on market prices), BD100 biodiesel is purchased at the wholesale price of 0# diesel, and B5 biodiesel is promoted at a discount and 80% is subsidized by municipal fiscal funds. The preferential part (if the preferential amount cannot be provided, a quantitative subsidy of 0.15 yuan/liter will be provided) and the emergency subsidy mechanism (when the wholesale price of 0# diesel oil is lower than 6,000 yuan/ton, municipal financial funds will provide emergency subsidies for those lower than 6,000 yuan/ton). Part of it is given to the disposal enterprise).

Regarding the subsidy ceiling, considering that the subsidy ceiling of 600,000 tons of B5 biodiesel has not yet been reached, it is recommended to maintain the "Interim Measures" that "if it exceeds 600,000 tons, it will be jointly reviewed by relevant departments and reported to the city government for approval before adjustment." It is estimated that the maximum annual subsidy funds involved are still 170 million yuan.

Regarding the subsidy period, it is recommended to implement it for another 2 years. In addition, considering the continued preferential supply and policy continuity of B5 biodiesel preparation and sales enterprises in order to maintain the promotion and application of B5 biodiesel, subsidies will be provided according to the new policy for the promotion and application from the previous round of policies to the new policy.
