Trailer Mounted Boom Lifts Range Explained

Niftylift's road-towable trailer-mounted boom lifts can be easily transported from site to site and set up quickly using manual or hydraulic outriggers*. They are designed to be as light and compact as possible, offering an excellent working envelope for their size. Their working heights range from 12m (40ft) to over 21m (69ft).

Easy-to-use proportional controls make them simple to operate, and features such as telescopic booms, fly-booms, platform rotation, traction drive and hydraulic outriggers* all help to maximise their effectiveness.

Trailer Mounted Boom Lifts Power Options

Power options available on Nifty trailer-mounted boom lifts include Battery, Mains, Petrol, Diesel, and 'Bi-Energy' (e.g., Battery & Diesel), combining the benefits of two power sources on the same machine.*

More Trailer Mounted Boom Lifts Information

For more information regarding our **trailer-mounted boom lifts** or any of our other boom lifts, please contact Niftylift today.

* Not available on all models, check specification sheets for details of exact features.
