## LGMG launches multiple ultra-high MEWPs and new forklifts

Time: 27/09/2025 Font size A A A

From September 26 to 27, **LGMG** successfully held the first Global Customer Festival in Jinan. During the event, the company held a new product launch ceremony and promoted several innovative aerial work platforms and new forklifts, demonstrating the new momentum of Chinese manufacturing.

The launch event was filled with a vibrant atmosphere. The newly launched products, including models such as the electric telescopic boom T56JE-2, diesel articulating boom lift AR42J-2, and the electric rough-terrain scissor lift SR2625E-2, have expanded the working height range of **LGMG's** aerial work platforms from 6 to 60 meters. With their worry-free operation, high efficiency, and safety, these products became the center of attention, fully embodying **LGMG's** product philosophy of "effortlessly lifting heavy loads, reaching new heights."

Among them, the star electric product, the T56JE-2 has been upgraded comprehensively in five aspects: an increase in boom deflection and rigidity for greater structural stability; adoption of an exclusive container transport design for easier transportation; use of a low-speed, high-torque permanent magnet synchronous motor, significantly reducing energy consumption for stronger power; and equipping with an 840AH large-capacity lithium battery and a dual charging system for longer endurance, making it a new benchmark for ultra-high electric equipment.

These new products unveiled at this event will soon be available to global customers. **LGMG** has committed to accelerating the launch of new products that comply with regional standards worldwide, continuously meeting market demands.

The X-series counterbalance forklifts feature a lead-acid and lithium battery common platform design, offering strong power, fast response, and high stability to meet daily operational needs. The core components of the X7 model all use top international brands, ensuring reliable

Additionally, **LGMG** released new energy unmanned mining trucks and an integrated smart mining photovoltaic-storage-charging solution, providing new examples for the industry's green transformation.

With the advancement of the "dual carbon" goals, China's engineering machinery industry is moving towards green and intelligent development. As a leading enterprise in the industry, **LGMG** continues to invest in electrification and digitalization. This Global Customer Festival was not only a showcase of new products and technologies but also an opportunity for the company to present its new image of systematic, high-end, and green development to the global market.

With this Customer Festival, **LGMG** will capitalize on the strengths of Chinese manufacturing, solutions, and quality to accelerate its global expansion in high-end equipment and make its voice heard more powerfully in this new era.
