Bar and wire producers, as well as welding companies, rely on Sheffield's wire rod mill for uniquely specialized products in a wide range of grades. Sheffield wire rod mill uses SMACC feedstock billets to produce wire rod in round, hexagon, and square shapes, as well as rebar coil.

Sheffield bar mill specializes in smaller sizes of hexagon and square cold-drawn bar and cut-to-length rebar. The unit's wide range of grades are designed for tailor-made applications. Even greater availability of unique product dimensions (special shapes and bars) is delivered through collaboration with a leading partner Böllinghaus Steel. SSB produces also Outokumpu's Prodec bars offering superior machinability. These are sold through IMS group in the key European countries.

Rebar is produced in a wide range of dimensions and lengths, coils and bent shapes. The offering also includes dowel bar and complementary products. Strategically located stainless steel rebar stocks ensure high availability and short lead time.

Sheffield Stainless Rod and Bar mill is the only producer in its category with its own melt shop, delivering high quality rod and bar, industry leading technical service, and tailored solutions.

## Key capabilities

**CALL US: +358 9 4211 (+35894211).**

**Uniquely versatile**

[CONTACT US](#)

- Wire rod and rod coil in a broad product portfolio including shapes. Good capability on difficult grades, as well as rebar rolling capability.
- A wide range of special shaped bars in hexagon, square and round bar.
