

AS0076: Anti-Subsidy Investigation

Boom Lifts originating in The People's Republic of China (PRC)

Note to Public File

Product Scope

27 February 2026

During the registration process, the Trade Remedies Authority (TRA) received comments from interested parties regarding the product scope.

After considering all comments, the TRA has decided that it is not necessary to change the scope at this stage. The product scope remains the same as described in the [Notice of Initiation](#) (NOI).

The TRA also received a comment on a registration form asking us to clarify whether mast boom lifts with jib were included in the goods description published in the NOI.

The TRA wants to clarify that mast boom lifts with jibs are included in the product scope as the platform of the boom lift can be extended outward entirely beyond the footprint of the machine. As mast boom lifts with jib have a turntable and a jib, they operate in a similar manner to other boom lifts.

Furthermore, they are treated equally from a regulatory standpoint and market perspective.
