Chemical Logistics

The Chemical Logistics Division of COSCO Shipping Logistics Supply Chain Co., Ltd. is a professional platform company specializing in chemical logistics supply chain integration services. It has seven self-operated hazardous chemical storage bases, including Shanghai, Suzhou, Xiamen, and Chongqing, with an area of over 200,000 square meters. It has two invention patents, 12 patents for utility models and 23 software copyrights. The company focuses on major domestic chemical industry parks, chemical industry concentration areas and important logistics hubs by adhering to the core concept of "essential safety, safe development". And it strives to create value-engineering chemical logistics service products based on its technical barriers and professional advantages centered by the complete safety and environmental protection management system, intelligent digital technology, and professional management group. More importantly, it is committed to becoming a leader in security, environmental protection and green development in the chemical logistics industry and the benchmark of standardization and productization in China.

Service Scope

[Home](#)[About Us](#)[Our Services](#)[News](#)[Contact Us](#)

1) Warehouse: We are equipped with Class A, B and C warehouses throughout the country, which can store all kinds of hazardous chemicals, and can also provide personalized storage services for small quantities and multiple varieties of fine chemicals according to customers' needs.

2) Transporting: We are qualified for transporting hazardous chemicals and can handle the transport services of 2-9 categories of hazardous chemicals.

3) International Freight Forwarding: With the worldwide network resources of COSCO Shipping Group and COSCO Shipping Logistics supply chain, the company provides import and export freight forwarding services for general cargo and hazardous chemicals between mainland China and major ports around the world.

4) Multi-Modal Transport: With customer needs as the core, resource matching, route optimization and other logistics solutions design, the company has in-depth cooperation with the largest domestic shipping companies, has been deeply involved in chemical industry customers, and has been the leading supplier of many famous chemical customers.

2、Value-added services

1) Liquid chemical filling

The company provides customers with comprehensive services, including packaging conversion, product heating, finished product filling, and cleaning required for pipeline switching during the filling process of ISO Tank/Bulk and other chemical products. It has obtained numerous invention and utility model patents through continuous technological improvement and innovation in the service process.

2) Tank cleaning and repair

The company has nine cleaning stations (including two food cleaning stations and one electronic chemical cleaning station), 12 tank testing platforms and one professional repair shop, meeting the cleaning and repair needs of 12,000 kinds of tanks.

3) Empty and heavy tank storage

The company has 1,840 slots, including 240 heavy slots for dangerous goods, 800 heavy slots for general goods and 800 empty slots.

4) Management output

The company marches into the production field of customers by providing services, such as in-plant logistics management, solid/liquid chemical packaging, personnel management, equipment management and safety management, etc.

5) Service related to environmental protection

The company also provides liquid waste transport, tank washing, water disposal, etc.

Characteristic Services

1、Intelligent management of chemical parks

The company realizes the centralized management of hazardous chemical vehicles and closed safety management of parks via the integrated solution of “1 set of information system + 1 resource view + 1 enabling center” by innovating the management mode of chemical industry parks, relying on digital and intelligent technological means and integrating into the high-quality construction of local chemical industry parks.

2、Emergency response ER rescue

The company has a professional hazardous chemical incident response team. The vehicles carry simple emergency rescue equipment, meeting the rescue needs within a range of 80-100 kilometers; some bases are equipped with professional ER equipment, meeting the rescue needs within a range of 30-40 kilometers in one hour.
