Before the groundbreaking ceremony, Chen Hua, the general manager of Zhongce Rubber (Thailand) Co., Ltd., and others had a simple project discussion on the construction of the No. 4 plant with the construction contractor. Chen Hua put forward three requirements:

First, epidemic prevention is still the focus of all work, so as to achieve "two-handed" prevention and control of epidemic and engineering construction.

The second is to continue writing the miracle of the Chinese strategy and create a "100-day construction project". Efforts should be made to overcome the difficulties of labor shortage and poor logistics and transportation under the influence of the epidemic, do a good job in project design and construction management from the perspective of the whole process, reverse the construction period, and ensure that the "100-day construction project" will be completed and put into use as soon as possible.

The third is to ensure the quality of project construction and create high-quality projects. It is necessary to do a good job in all preparatory work in accordance with the law and regulations, and the construction contractor should speed up the progress of the project construction on the basis of ensuring the quality, so as to create a quality project that can stand the test.
