Outline of the 14th Five-Year Plan for National Economic and Social Development of Sanmen County and the Long-Range Goals for 2035

Click to view the interpretation

The Outline of the 14th Five-Year Plan for National Economic and Social Development of Sanmen County and the Long-Range Goals for 2035 is formulated in accordance with the Suggestions of the Sanmen County CPC Committee on Formulating the 14th Five-Year Plan for National Economic and Social Development of Sanmen County and the Long-Range Objectives for 2035, which is a program of action for the people of the whole county to work together and an important

basis for the government to perform its functions in an all-round and correct manner. It is an important reference to guide the behavior of market entities.

1. A new starting point to start a new journey of socialist modernization

Facing the "14th Five-Year Plan", our county has entered a new stage of development on the basis of building a moderately prosperous society at a high level in an all-round way. The whole county should stand at a higher starting point, open a broader vision, assume greater responsibilities, take Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era as guidance, faithfully implement the "Eighth Eight Strategy", strive to build an "important window", firmly adhere to the development path of the municipal party committee in the new era of "three standings, three advances, and three breakthroughs", plan the overall situation, coordinate development, and unswervingly promote our county to stride forward along the road of modernization.

(1) Decisive achievements have been made in building a moderately prosperous society in an all-round way at a high level

During the "Thirteenth Five-Year Plan" period, under the correct leadership of the county party committee and the county government, the whole county held high the great banner of Xi Jinping's thought on socialism with Chinese characteristics for a new era, closely surrounding it The development goal of "creating a new era of marine economy" has adhered to the development of advancing to the sea and embracing the bay, solidly promoted the construction of "industrial harbor, energy capital, and healthy and beautiful city", achieved comprehensive economic and social development, and laid a solid foundation for opening a new journey of high-level and comprehensive construction of socialist modernization.

Comprehensive strength has achieved leapfrog development. In 2020, the county's GDP reached 273.4 billion yuan, with an average annual growth rate of 8.4%. Per capita GDP reached 61184.8 yuan, with an average annual growth of 1.16%. The general budget revenue of local finance reached 16.10 billion yuan. The total retail sales of consumer goods jumped to tens of billions of steps, and foreign trade grew rapidly with an average growth rate of 5.◇%. The transformation and upgrading has been accelerated, and it has won the advanced assessment of the province's elimination of backward production capacity and the work goal of "cage for bird". The integration and upgrading plan of the Sanmen Economic Development Zone has been approved by the province, and the agglomeration of high-quality resources has been accelerated.

Innovation-driven breakthrough progress. For the first time, it entered the ranks of the top 14 counties in national science and technology innovation, and the province's innovation progress index ranking jumped to 2th. R&D expenditure accounts for 36% of GDP. Initially formed the "one core and three zones" innovation space layout, Sanmenwan (Hangzhou) Science and Technology Innovation Plaza, Ningbo Sanmen Collaborative Innovation Base were put into operation, a new provincial storm suit industry innovation service complex was added, Taizhou Beibu Bay Area Mechanical and Electrical Small and Micro Park was selected into the list of digital demonstration small and micro enterprise parks in the province, Ningbo Institute of Technology Sanmen Research Institute, The three research institutes of Taizhou University have been landed successively, and the first foreign academician workstation in Taizhou has been established. National leading innovative talents, high-end entrepreneurial talents, and Class A entrepreneurial talents have all achieved "zero" breakthroughs. The quantity and quality of innovation subjects have been improved, and 173 national high-tech enterprises have been added, and 47

provincial science and technology-based small and medium-sized enterprises have been added. The added value of high-tech industries reached 8.57 billion yuan, accounting for \triangleleft % of the added value of industrial industries above the regulations.

Substantial strides have been made in reform and opening up. Led by the reform of "running at most once", accelerating the digital transformation of the government, enterprises have run the new speed of 10 days of whole-process approval, and "silver seal joint office" and administrative fines "scan code payment" are at the forefront of provinces and cities. Continue to promote the "three services" to deepen and refine, in the past three years, there has not been an outflow of local high-quality enterprises in the county. Successfully strive to become a provincial pilot city for supply chain innovation and application, and introduce the experience of county-level media reform, county spear investigation center construction, and political construction of leadership groups in the whole province. Integrating into the Zhejiang Greater Bay Area and Taizhou Bay Area Development Pilot Zone, the construction of the development pilot zone has been fully accelerated, the Sanmen section of the coastal expressway has been opened to traffic ahead of schedule, the expansion project of the Sanmen section of the 326 provincial highway, the first phase of the Shugang Highway in the South Port District of Taizhou Port, and the Sanmen Shepan to Ninghai City (Sanmen section) have been completed and put into operation. The development of Jianjiao first-class port has been approved by the State Council, and the energy level and navigation capacity of Jianjiao Port Area have been improved, and the annual throughput of the terminal has reached 1200 million tons.

The ecological environment has been continuously improved. Continue to promote the construction of "six beauty and three gates", create a national health county and a provincial ecological civilization construction demonstration county, and be awarded the first "climate health county" in China. The excellent air quality rate has reached 100%, and it has been rated as a clean air demonstration area in the province. High standards continue to promote "five-water co-governance", the rectification of inferior class V water is accelerated, and the construction of "zero sewage discharge area" is fully rolled out. The forest coverage rate reached 62.67%. "Four Sides and Three Modernizations" continued to make efforts and was successfully shortlisted for "Along the Provincial Quality Demonstration Railway". Vigorously promote the "three reforms and one demolition", and create a county in Chuangcheng Province basically without violating the regulations. Solidly carry out the rubber industry environmental protection improvement project, and completely eliminate coal-fired small boilers.

Remarkable results have been achieved in urban and rural construction. Striding forward to the construction of a modern coastal city, the organic renewal of the old city has been accelerated, the image of the Dahutang New Area has been continuously enriched, and the western district has successfully completed the transformation of urban functions; The comprehensive improvement project on the north shore of Haiyou Port is progressing in an orderly manner. The coordinated development of counties has been carried out in an all-round way, and it has been shortlisted as a pilot county for the construction of the national rural governance system, and has been rated as an excellent unit for the implementation of the rural revitalization strategy in the province, Zhuao and other 5 The townships have completed the comprehensive improvement of the environment of small towns, and built 4 provincial beautiful rural demonstration townships, 14 provincial beautiful rural boutique villages, and 4 provincial key historical and cultural protection villages. All 271 villages have achieved the task of thinning. The level of urban-rural integration has accelerated, and the per capita income gap between urban and rural residents is 1.78,

0.16 percentage points lower than that of the whole city; The integrated operation of urban and rural public transport was officially launched, the integrated operation and maintenance of urban and rural domestic sewage treatment facilities achieved full coverage, and the rural drinking water standard upgrading project was fully completed.

People's livelihood and well-being have been comprehensively improved. The per capita disposable income of urban and rural residents reached 50538,28309 yuan and 7,8 yuan respectively, with an average annual growth rate 8.5% and 74.35%. Investment in the field of social and people's livelihood continued to increase, with people's livelihood expenditure accounting for 2% of total fiscal expenditure, the total number of participants in basic endowment insurance 3,9, and the cumulative number of new urban jobs exceeding 100, <>. The level of public services such as education, health and sports has been steadily improved, and the development level of education modernization ranks third in the city, and the provincial education basic modernization county and national health county town have been successfully established, and the health township has achieved full coverage. The assessment of Ping An Comprehensive Management ranked first in the city, and the high score achieved Ping An's "sixteen consecutive innovations", and entered the top ten in the province for three consecutive years. The foundation of national defense mobilization has become more solid, and the grassroots armed forces department has met <> percent of the standards.

The development results of the "Thirteenth Five-Year Plan" have not come easily, but it should also be noted that the current quality of economic development in our county is relatively backward compared with other counties (cities and districts) in the city, and the characteristics of "rapid changes in the external environment and slow transformation of its own development" are obvious, and there are mainly the following problems: **the industrial level is low.** The industrial structure hovering at the middle and low end of the value chain has not been fundamentally changed. **Lack of kinetic energy continuation.** Leading enterprises and innovation capabilities cannot keep up with the rapid development of the new economy, and emerging growth points such as the digital economy have not yet formed a "burning plain" trend; Industrial digitalization and intelligent transformation are still in their infancy. **The bearing capacity of the platform is weak.** The contradiction between more idle land and less buildable land has not been effectively solved, which has become an important bottleneck restricting the development of the 14th Five-Year Plan. **The level of industry-city integration is low.** The linkage between the belt groups around the bay formed by the "three ports and three cities" strategy is relatively low, and the phenomenon of "propertied without city" in coastal industrial city and "city without production" in coastal science and technology city is more prominent. **The central urban area is not high.** The integration degree of the three central streets of Haiyou, Hairun and Shaliu is low, the fast track between regions has not yet been formed, the ability of connectivity and integration is weak, the function of agglomeration and radiation has not yet been prominent, and the phenomenon of population outflow is prominent. **The foundation for openness is relatively weak.** The total value of import and export is located at the back of the city, and the advantages of port multimodal transport opening have not yet been brought into play, and the function as a gateway to Yongtai needs to be strengthened. **The provision of public services is inadequate.** There is still a gap between the supply and service level of public resources such as education, medical care, and old-age care and the people's demand for a better life, the level of grassroots social governance still needs to be improved, and the pace of modernization of county social governance needs to be accelerated.

Table 1: Completion of the main indicators of national economic and social development in Sanmen County during the "Thirteenth Five-Year Plan" period

category	serial number	Metric name		In 2015	Plan goals		Completion		attribute
					2020	Average/cumulative annual growth	2020	Average/cumulative annual growth	
economic development	1	GDP (billion yuan)		173.38	250	8.0%	273.4	8.4%	Anticipation

Note: 1.[]. The internal is the five-year cumulative number; 2. Data such as urbanization rate and fixed asset investment are difficult to evaluate due to changes in statistical caliber.

(2) New opportunities and challenges facing the new stage of development

At present and for some time to come, the overall situation of the great rejuvenation strategy of the Chinese nation interacts and stirs each other with the great changes unprecedented in the world in a century, and our county is facing a series of new opportunities and challenges.

Internationally, a new round of scientific and technological revolution and industrial transformation is reshaping the world with an unstoppable trend, and the digital era of "Internet of Everything" is coming. At the same time, the reform of the global governance system and international order is accelerating, and the international environment is becoming increasingly complex. The global industrial chain and supply chain are facing multiple impacts; The global epidemic of the new crown pneumonia has triggered a series of major adjustments and changes, and the world has entered a period of turbulence and change.

From the domestic point of view, at present, China has entered a stage of high-quality development, and the people's yearning for a better life presents diversified, multi-level and multi-faceted characteristics, and proposes to focus on smoothing the national economic cycle and build a new development pattern of domestic and international "dual circulation", which is adopted Deepening the opening and cooperation of domestic and international markets has brought development opportunities for the reconstruction of the domestic industrial chain and the relay of the regional economy, and put forward higher requirements for the upgrading of the industrial structure.

From the perspective of the province, Zhejiang will faithfully implement the "Eighth Eight Strategy", bravely undertake the "important window" and strive to create a new mission of the leading province of socialist modernization, and vigorously deepen the "Belt and Road" The implementation of strategies such as regional integration in the Yangtze River Delta and the "four major constructions" has amplified the leading advantages of the "digital economy", fully releasing the dividends of openness, innovation, and Share dividends, stimulate new development vitality with deepening reform, start a new journey of modernization Zhejiang construction at a high level, and build a high-quality development and common prosperity demonstration area.

From the perspective of Taizhou, as an advanced manufacturing base in the Yangtze River Delta region and an important plate of Zhejiang manufacturing, Taizhou has made every effort to build an "Industry 4.0 benchmark city" and accelerate the construction of a strong city with high-quality development of the

private economy in the new era. Under the policy dividends of the state, provinces and cities to fully support the high-quality development of the private economy, we will focus on creating an optimal business environment, expanding opening up, leading the improvement of the city's energy level, highlighting Taizhou's responsibility in the province, and striving to build a leading city for common prosperity.

Comprehensive judgment in the next five years, Sanmen will enter the adjustment period of new and old kinetic energy conversion, the overall leapfrog change period of the industry, the leapfrog period of urbanization improvement, and the breakthrough period of regional competition and cooperation development. It is necessary to respond to changes scientifically, take the initiative to seek changes, find the correct positioning from the global vision, national strategy, and the overall situation of provinces and cities, take the lead in the crisis, and open up a new situation in the changing situation.

(3) 2035 Vision goals

Our county will basically achieve high-level modernization, accelerate the construction of the Yangtze River Delta opening and integration vanguard, the bay area hard-core manufacturing agglomeration area, the city's strong and active growth pole, and become a beautiful scenery that comprehensively displays the superiority of the socialist system with Chinese characteristics, with a regional GDP of more than 700 billion yuan and a per capita GDP of 15,000 yuan.

-- The main economic indicators have accelerated their rise in the ranking of the province, basically realized new industrialization, informationization, urbanization and agricultural modernization, enhanced the leading role of new technologies, new industries, new formats and new models, significantly improved the quality and efficiency of development, and built a modern economic system.

-- Building an overall intelligent governance system and modern government at a high level, building three doors of rule of law, and basically realizing the modernization of county social governance.

-- The cities in the modern Bay Area have been fully completed, the function of opening up and connecting the door has become more prominent, the activity of foreign trade has reached a new level, and the new advantages of participating in international economic cooperation and competition have been significantly enhanced.

-- Establishing a modern public service system, realizing the modernization of education, medical care and old-age care, and significantly narrowing the gap between urban and rural development and residents' living standards; Cultural soft power has entered the "first echelon" of the province, socialist spiritual civilization and material civilization have developed in a comprehensive and coordinated manner, the three spiritual disseminators and influence in the new era are stronger, and the people's moral quality and civilization degree are higher.

-- Basically realize the modernization of harmonious coexistence between man and nature, comprehensively promote green production and living mode, significantly improve the environmental quality of water, air and soil, continuously improve the marine ecological environment, and the main indicators of green development are in the forefront of the province.

-- The party's comprehensive leadership has been implemented in all fields, and the efficient implementation system in all aspects has been fully formed, the strict management of the party in an all-round way has been continuously and deeply advanced, the three gates of honesty and honesty have been

accelerated, the political ecology has been clean, and the advantages of the socialist system with Chinese characteristics have been fully displayed.

2. Overall requirements and development goals for the 14th Five-Year Plan period

(1) Guiding ideology

The guiding ideology of the three economic and social development during the "14th Five-Year Plan" period: hold high the great banner of Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era, deeply implement the spirit of the 19th Party Congress and the 2nd, 3rd, 4th and 5th Plenary Sessions of the 19th CPC Central Committee, coordinate and promote the overall layout of the "five-in-one", coordinate and promote the "four comprehensive" strategic layout, adhere to the party's comprehensive leadership, take the people as the center, grasp the new development stage, implement the new development concept, build a new development pattern, and strive to build a "Eight-Eight Strategy" around the faithful implementation of the "Eight-Eight Strategy" Important Window", coordinate development and security, use system concepts and systematic methods, and take "a strong city with high-quality development of the private economy in the new era and a northern engine of a pioneer city of socialist modernization" as the overall goal of construction "Science and technology, ecological, bay-area Yangtze River Delta satellite city" as the overall positioning, strive to build a pilot area connecting Shanghai and Ningbo, a demonstration area for the development of the bay area, an advanced manufacturing core area, and a model area for Shanhai City to comprehensively start a new journey of modernization construction in Sanmen, develop and build a leading county for common prosperity with high quality, and create a happier and better life for the people.

(2) Development principles

Firm industrial strength county unwavering. Persistently and vigorously develop industry, benchmark Zhejiang to accelerate the construction of a global advanced manufacturing base and the city's strategy of building a national advanced manufacturing cluster, and plan the development of industry 4.0 in our county from a high starting point Strengthen digital empowerment, service empowerment, and factor empowerment, and improve the modernization level of the industrial chain and supply chain.

Unwaveringly open development. Based on the integration of the Yangtze River Delta, expand and strengthen the marine economy and the bay area economy, adhere to the concept of "global integration and comprehensive integration", strengthen linkage and coordination, and make every effort to build a Taizhou metropolitan area with a long-term connection to Shanghai and a joint Hangzhou integration with Ningbo New portal.

Steadfast innovation leads unwaveringly. With scientific and technological innovation as the new engine, vigorously promote the scientific and technological innovation platform, the agglomeration of scientific and technological innovation elements, and the transformation of scientific and technological innovation production capacity, actively integrate into the Ningbo Yongjiang Science and Technology Innovation Corridor and the Taizhou Bay Science and Technology Innovation Corridor, and comprehensively improve the ten-linkage collaborative innovation ability of "production, education and research funds, talents, politics, and the United States".

Unwavering commitment to green development. Always put the development concept of "green water and green mountains are golden mountains and silver mountains" throughout the whole field of economic and social development, give full play to the characteristics of mountains and seas, highlight

ecological advantages, make green the most moving color of Sanmen development, and draw a happy foundation with beautiful ecology.

Strengthen the coordination of urban and rural areas. Guided by new-type urbanization, promote urban and rural areas

Integrated development, promote the integration of industry and cities, enhance population agglomeration, adjust and optimize the labor structure, build a virtuous circle of taking people with production and rejuvenating the city with production, optimize public services, and promote the comprehensive integration of urban and rural areas.

Firmly prioritize people's livelihood without wavering. Comply with the people's new expectations for a better life, focus on the whole life cycle of people, accelerate the all-round development of the people and the all-round progress of society, reflect the results of high-quality development into the happiness, attainment and security of the masses, and strive to achieve common prosperity .

(3) Development orientation

Overall positioning: **"one city and four districts" five functional positioning.**

"One city": that is, to build a science and technology, ecological, bay area type Yangtze River Delta satellite city. Seize the strategic opportunity of regional integration in the Yangtze River Delta, achieve high-quality leapfrog development, highlight the unique advantages of the opening up of the Bay Area, base on the location conditions of Taizhou's northward opening "bridgehead", and play the role of the northern engine in Taizhou's construction of a strong city with high-quality development of the private economy in the new era; Focusing on Shanghai, Hangzhou, Ningbo and other large urban agglomerations, actively undertake the spillover effect of the integrated development of the Yangtze River Delta, give full play to its own advantageous resources such as transportation, land and ports, benchmark against Industry 4.0 benchmark cities, form a county economic system with three characteristics, and build a "science and technology-based, ecological, bay-area Yangtze River Delta satellite city".

"Four Zones": Connecting the Shanghai-Rongningbo Pilot Zone, the Bay Area Development Demonstration Zone, the Advanced Manufacturing Core Zone, and the Shanhai Sea City Model Zone.

Connected to the Shanghai-Rongyong Pilot Zone. Give full play to the location advantage of Taizhou's northbound bridgehead, take the initiative to dock with strategies such as regional integration in the Yangtze River Delta, attract talents and wisdom, jointly build projects, gather resources, and be a vanguard of opening up and integration.

Bay Area Development Demonstration Zone. It is necessary to actively integrate into the overall situation of all-round opening up, take the Bay Area as the main platform for development and opening up, adhere to the port leadership and bay development, promote more elements and resources to gather in the Bay Area, enhance the economic scale and strength of the Bay Area, and create a new growth point along the coast of Zhejiang.

Advanced manufacturing core area. Deeply implement the "three-year action plan for new manufacturing", comprehensively promote digital and intelligent transformation, improve the advanced industrial foundation and modernization of the industrial chain, and build an advanced manufacturing system for Industry 4.0.

Shanghai City model area. Promote the overall planning of urban and rural areas and the integrated development of Hong Kong, industry and city, optimize the layout of functional facilities suitable for living, working and traveling, integrate green mountains, green water and blue sea into the urban landscape, display the characteristics and charm of the city in the dewy water, and create a three-door model of beautiful Zhejiang.

(4) Development goals

During the "14th Five-Year Plan" period, anchoring the long-term goals of 2035, focusing on high-quality development, competitiveness improvement, and modernization first, significantly strengthening comprehensive strength, scientific and technological innovation, reform and opening up, cultural development, ecological quality, social governance, people's livelihood and well-being, etc., residents' sense of gain, happiness and security have been significantly improved. Strive to create systematic breakthrough landmark achievements with three recognizable doors, explore a new path of common prosperity, and write a new chapter of development in the new era.

Comprehensive strength has leapt to a new level. The economy has maintained medium-high growth, and the growth rate of regional GDP and per capita GDP will strive to be higher than the average level of the province and the city, and by 2025, the regional GDP will reach 0.25 trillion yuan, and the per capita GDP will reach 40,000 yuan. Fiscal revenue has increased significantly, and the general public budget revenue has reached 600 billion yuan. Industrial development has improved quality and efficiency, built a strong industrial county in the country, and the total industrial output value has exceeded 65 billion yuan. The urbanization rate of the permanent population has reached >80%.

Scientific and technological innovation is revitalized. Major breakthroughs have been made in the construction of innovative talent teams, institutional reform, major platform building, and the cultivation of innovative subjects. Investment in scientific and technological research and development has been increasing, and R&D funds account for more than 3% of GDP. The driving force of scientific and technological innovation on economic development has been significantly enhanced, with 6.2 high-value invention patents per 1,000 people, and the added value of core industries in the digital economy accounting for >10% of GDP.

New breakthroughs have been made in reform and opening up. With digital reform as the driving force to comprehensively deepen reform, the market mechanism is more active, the business environment of market-oriented rule of law and internationalization has basically taken shape, and the development of the private economy has reshaped new advantages. By 2025, the import and export volume of goods trade will exceed 100 billion yuan, the total self-operated export volume will exceed 95.0 billion yuan, and the actual utilization of foreign capital will reach 22 million US dollars.

Cultural development opens up new horizons. The core values of socialism are deeply rooted in the hearts of the people, cultural self-confidence is fully manifested, the culture of reclamation, the culture of uprising by the pavilion, and the culture of nuclear power have been further promoted, the protection of historical and cultural heritage has been significantly increased, the public cultural service system and cultural industry system have become more sound, the people's spiritual and cultural life has been increasingly enriched, and the ideological and moral quality has been greatly improved. By 2025, the added value of cultural and related industries will reach 1 trillion yuan, and the comprehensive reading rate of residents will reach 90%.

New improvement in ecological quality. The quality of the ecological environment has been significantly improved, and the transformation of production and lifestyle to green and low-carbon has accelerated. The main pollutant indicators meet the national requirements. The efficiency of energy resource development and utilization has been greatly improved, and the reduction rate of energy consumption per unit of GDP and carbon dioxide emissions per unit of GDP have reached the targets issued by provinces and cities. The proportion of days with good air quality reached more than 95%, the proportion of surface water reaching or better than Class III water bodies remained 100%, and the forest coverage rate reached 62.75%. The construction of ecological coastal zones has achieved remarkable results.

Social governance has reached a new height. The level of government governance capacity and modernization of governance level has been comprehensively improved, and the rate of "one-network handling" according to the application of government service documents exceeds 90%. The institutional mechanism for preventing and resolving major risks has been continuously improved, the emergency response capacity for public emergencies has been significantly enhanced, and the mortality rate of production safety accidents of 0 million yuan GDP has been controlled within 01.20 people/＜ million yuan. The rule of law government has been basically completed, the level of judicial credibility has been significantly improved, and comprehensive administrative law enforcement matters account for more than ＜%.

People's livelihood and well-being have reached a new level. To achieve fuller and higher-quality employment, residents' income is basically synchronized with economic growth, the scale of middle-income groups continues to expand, the structure continues to optimize, and the per capita disposable income of urban and rural residents exceeds 7,5 yuan and 4,5 yuan. The income ratio of urban and rural residents was controlled within 1.7, and the cumulative number of new urban jobs reached 2,8. The people's livelihood security system covering urban and rural areas has been further improved, and the level of balanced and high-quality basic public services has been continuously improved. The average number of years of education of the working-age population has reached 13.2 years, the number of practicing (assistant) physicians per 3,05 people (permanent population) exceeds 5.＜, and the number of licensed elderly care workers per ＜,＜ elderly people exceeds ＜.

Table 2 Main indicators of economic and social development in Sanmen County during the ＜th Five-Year Plan

category	serial number	Indicators	In 2020	In 2025	Annual/cumulative	attribute
economic development	1	Gross Regional Product (GDP) (%).	-	-	7.5	Anticipation
	2	Manufacturing value added as a percentage of GDP	23.8	30	—	Anticipation
	3	Total labor productivity growth (%).	—	—	7 or more	Anticipation
	4	Urbanization rate of permanent population (%).	56.3	65	—	Anticipation
Scientific and technological innovation	6	R&D expenditure as a percentage of GDP	2	3	—	Anticipation
	7	Total human resources (10,000 people)	8.08	12	—	Anticipation
	8	Ownership of high-value invention patents per 10,000 people (pieces)	5.14	6.2	—	Anticipation
	9	The added value of the digital economy as a percentage of GDP	-	-	Issued by superiors	Anticipation

Reform		Among them: the added value of the core industries of the digital economy accounts for the proportion of GDP (%).	2.01	3	—	Anticipation
	10	Import and export volume of goods trade (100 million yuan)	69.7	100	—	Anticipation
	11	Import and export volume of service trade (100 million yuan)	0.02	0.05	—	Anticipation
Cultural development	12	Amount of foreign capital actually used (US\$ billion)	0.21	0.22	—	Anticipation
	13	Added value of culture and related industries (100 million yuan)	5.2	10	—	Anticipation
	14	Residents' comprehensive reading rate (%).	89.1	93	—	Anticipation
	15	Reduction in energy consumption per unit of GDP (%).	—	—	Issued by superiors	Binding
	16	CO2 emissions per unit of GDP reduced (%).	—	—	Issued by superiors	Binding
Ecology	17	10,000 yuan of GDP water consumption reduction (%).	—	—	[11]	Binding
	18	Percentage of days with good air quality in cities (%).	100	95 or more	—	Binding
	19	Average concentration of fine particulate matter (PM2.5) in cities ($\mu\text{g}/\text{m}^3$).	21	21	—	Binding
	20	Proportion of water quality sections of rivers in the county Category I-III (%)	100	100	—	Binding
	21	Forest cover (%).	62.67	62.75	—	Binding
County governance	22	According to the application for government service office "one-network office" Rate (%).	/	90 or more	—	Binding
	23	Proportion of comprehensive administrative law enforcement matters (%).	7	20 or more	—	Binding
	24	There are nursery places for infants and toddlers under 3 years of age per <>, <> population	1.34	1.7	—	Anticipation
	25	Average years of schooling of the working-age population (years)	12.2	13.2	—	Binding
Social livelihood	26	Number of new urban jobs (10,000)	—	—	[2.8]	Anticipation
	27	Growth in per capita disposable income (%).	—	—	It is basically in sync with economic growth	Anticipation
	28	Number of practicing (assistant) physicians per 1,000 population (resident population) (persons)	2.56	3.05	—	Anticipation
	29	Number of beds in medical institutions per 1,000 population (beds)	3.56	4	—	Anticipation
	30	Basic endowment insurance participants (10,000 people)	35.2	35.3	—	Anticipation
	31	Number of licensed elderly care workers per 10,000 elderly population (persons)	1	5	—	Anticipation
	32	The overall myopia rate among children and adolescents is reduced (%).	—	—	[5]	Binding
	33	Sports space per capita (sqm)	3.22	3.26	—	Anticipation
Security guarantees	34	Life expectancy (years)	81.87	81.9	—	Anticipation
	35	100 million GDP production safety accident mortality rate (people/100 million yuan).	0.0073	<0.01	—	Binding

36	Coal, oil and gas storage capacity (10,000 tons of standard coal)	14	20	—	Anticipation
37	Comprehensive grain production capacity (10,000 tons)	15.45	17.5	—	Binding

Note: 1. [] is a five-year cumulative number. 2. GDP growth and per capita disposable income growth are calculated at comparable prices; The absolute value of the added value of cultural and related industries is calculated at constant prices in 2020; The growth of total labor productivity, the import and export volume of goods trade, the import and export volume of service trade, and the actual use of foreign capital are calculated according to the current year's prices.

3. Strengthen the support and guidance of scientific and technological innovation, and build a new global innovation system

Adhere to the core position of innovation in modernization, vigorously implement the innovation-driven strategy, deeply integrate into the innovation layout of provinces and cities, gather innovation resources, enhance innovation capabilities, and create a core engine to support high-quality development.

(1) Build a high-level innovation carrier

Promote the construction of scientific and technological innovation platforms. Optimize and upgrade the provincial rubber industry innovation service complex, strive to create a provincial model, and plan to promote the construction of a national rubber inspection and testing center. Focusing on key industries such as auto and motorcycle parts, equipment manufacturing, and storm suits, a number of industrial innovation service complexes have been added. Initiate the establishment of provincial-level high-tech industrial parks, upgrade the energy level of Sanmenwan Science and Technology Innovation Square, and promote the efficient operation of cooperation platforms such as the Sanmen OLED Industry Research Center of Zhejiang University and the Sanmen Research Institute of Taizhou University. Comprehensively improve the level of the "500 Elite Plan" entrepreneurship and innovation park.

Build a collaborative innovation platform. Actively integrate into the Yangtze River Delta innovation circle, fully integrate into the Ningbo Yongjiang Science and Technology Innovation Corridor and Taizhou Bay Science and Technology Innovation Corridor, dock with Shanghai, Hangzhou, Ningbo and other science and technology innovation centers, and plan to establish "enclave-type" R&D centers and off-site incubation bases in Shanghai Zhangjiang, Hangzhou Chengxi, Ningbo Yongjiang and other regions. Plan to jointly build cross-regional innovation collaboration platforms such as collaborative innovation centers and industrial technology innovation strategic alliances, and focus on promoting the construction of the Yongtai Talent Cooperation Demonstration Zone (Sanmen). Strengthen scientific and technological exchanges and cooperation with countries and regions along the "Belt and Road" and achieve zero breakthroughs in overseas incubators.

Create a new incubation platform. Improve "co-working space + incubator + accelerator+ Industrial Park "System, promote the upgrading of listed incubators such as high-tech industry incubators and rubber industry incubators. Explore the incubation model of "professional incubation + venture capital + entrepreneurial mentor", encourage diversified investment in the whole society to build a science and technology business incubation platform, and vigorously promote science and technology entrepreneurship service centers, University Science Park, College Student Business Park, etc., and strive to build more than 2025 public innovation spaces by 5, and the number of provincial ones will reach more than 2; Strive to achieve zero breakthrough in provincial and municipal incubation platforms.

(2) Build a contingent of high-quality talent

Vigorously gather high-end innovative talents. Thoroughly implement the "Kunpeng Plan", the national-level and provincial-level "Talent Introduction Program", and the municipal "500 Elite Plan", and

accelerate the introduction and cultivation of a number of leading talents. Implement the youth talent gathering plan, carry out the "return to their hometown and contribute to their hometown" action for college students, and the special action of graduates of local vocational colleges staying in enterprises, introduce young talents with extraordinary measures, and actively build a youth development city. Innovate the talent introduction model, and carry out talent introduction, party and government "number one" and leading enterprises "number one" talent introduction, "public recommendation system" recruitment and "online + " Offline "linkage to attract talents, etc., establish and improve the collaborative promotion mechanism for attracting investment and talents. Strengthen the flexible introduction of intelligence at home and abroad, set up expert workstations, scientific research workstations, etc., and attract high-end talents to participate in scientific and technological research and development projects.

Expand the team of entrepreneurs and skilled talents in the new era. Implement the "Quality Improvement of Private Entrepreneurs" and "Zhejiang Businessmen Blue Relay Project", encourage the second generation and the third generation of enterprises to become the second generation and the third generation, build a team of entrepreneurs who keep pace with the times, and cultivate high-level management talents. Implement the "Action Plan for the Construction of Craftsman Talent Team", pay attention to the inheritance of famous masters' skills, and select and cultivate a group of "three craftsmen". Carry out the "golden blue collar" vocational skills improvement action, establish and improve the new apprenticeship system of enterprises, and strive to build a new blue-collar team. Multi-channel to explore talents in niche crafts, national intangible cultural heritage and other special fields.

Improve the talent training and attraction guarantee system. Deepen the reform of the talent development system and mechanism, improve the talent evaluation system, and establish a talent allocation and incentive mechanism oriented by ability and contribution. Establish and improve a more inclusive, flexible and precise talent policy system, and achieve full coverage of high-school-based talent policies. Explore the global talent introduction mechanism of "unveiling the leaderboard", and establish and improve the salary, assessment, scientific research management, social security and other systems for high-level talents. Establish a "one-stop" office hall for talents, and explore the "one thing" reform of the whole life cycle of talent entrepreneurship and innovation. Optimize the process of scientific and technological services, implement the green channel system, properly solve practical problems such as medical treatment, housing, and children's schooling for all kinds of talents, and create a safe and comfortable development environment for talents.

Box 1: Major actions for talent gathering

1. High-end talent gathering action. Implement the "Kunpeng Plan", the national-level and provincial-level "Talent Introduction Plan", and the municipal "500 Elite Plan", efficiently implement the Taizhou Talent New Policy 2.0, and introduce national and provincial talent introduction plan experts by 2025 More than 25 people, more than 500 talents in Taizhou "50 Elite Program".

2. High-skilled talent gathering action. Implement the "Action Plan for the Construction of Artisan Talent Team" and the "Golden Blue Collar" Vocational Skills Upgrading Action Plan, and by 2025, more than 10 "three-discipline craftsmen" will be cultivated, and more than 5000,◇ new high-skilled talents will be added.

3. College graduates gather action. Carry out the "Wisdom Gathering Taizhou, Talents Gather the World" four-season tour talent introduction activity, implement the special action of returning graduates from three disciplines and local vocational college graduates staying in enterprises, and introduce more than 2025,15000 college graduates by ◇.

(3) Create a main body of high-tech innovation

Strengthen the team of innovative enterprises. Build a ladder cultivation mechanism for science and technology small and medium-sized enterprises-high-tech enterprises-innovative leading enterprises, implement the "doubling" plan for the number of science and technology small and medium-sized enterprises, high-tech enterprises and listed entrepreneurs, and continuously expand the team of science and technology enterprises. Promote high-quality technology-based enterprises to be listed on the Science and Technology Innovation Board and the New Third Board, and support the listing of powerful enterprises on the Science and Technology Innovation Board.

Improve the innovation ability of enterprises. Support the establishment of enterprise research institutes, enterprise postdoctoral workstations, engineering technology research centers and enterprise technology centers. Promote the in-depth integration of production, education and research, support leading enterprises to form industrial innovation consortiums, and promote the integration and innovation of upstream and downstream of the industrial chain, large and small enterprises. Strengthen R&D project tracking and management services, and promote the application of "enterprise R&D project information management system". Encourage and guide enterprises to increase R&D investment, effectively implement the pre-tax super-deduction policy for enterprise R&D expenses, and establish a risk compensation mechanism for R&D investment.

Strengthen research on key technologies. Docking with the four major plans of provincial scientific and technological innovation peak, sharp soldier, leading geese and pilot, encourage and support leading enterprises and scientific research platforms to dock with national strategic tasks, implement key technology research, and strive to list key research and development projects in key R&D projects at the provincial level and above. Comprehensively promote the development and application of the first set, the first batch and the first version of the product. Encourage and support enterprises to jointly carry out key core technology research with universities and research institutes.

Box 2: Innovative Enterprise Cultivation Actions

1. Innovative leading enterprise cultivation actions. Focusing on strategic emerging industries and pillar industries, identify a group of innovative leading enterprises with industry demonstration and driving role, support the opening of industrial chains, innovation chains and financial chains, and lead the industrial development of the county. By 2025, a number of innovative leaders will be built.

2. "Multiply" action of high-tech enterprises. Establish a high-tech enterprise cultivation bank, establish a rolling implementation cultivation mechanism, and improve support policies. By 2025, more than 5 new high-tech enterprises will be added.

3. Technology-based small and medium-sized enterprises growth action. Give full play to the role of science and technology-based small and medium-sized enterprises as a new force for innovation, and aim to become larger in scale and stronger in strength, and realize the fission-type growth and cluster development of technology-based

small and medium-sized enterprises. Accelerate the cultivation of science and technology-based small and medium-sized enterprises and high-tech enterprises. By 2025, more than 2,000 technology-based small and medium-sized enterprises will be added.

(4) Create a high-efficiency innovation ecology

Promote the transfer and transformation of scientific and technological achievements. Improve the mechanism for trading and transforming innovative achievements, and implement the reform policy of the right to dispose of scientific and technological achievements and the right to benefit. Develop professional services for science and technology intermediaries, cultivate and introduce intermediary service institutions, and establish a service system that integrates the whole process of R&D, trading, and transformation. Relying on the three-door science and technology market, improve and strengthen the functions of display, trading, sharing, service and communication, and provide one-stop all-round services. Actively promote the docking and exchange of scientific and technological resources with developed regions, strive to sign strategic cooperation agreements with Shanghai, Hangzhou, Ningbo, Taizhou and other large science and technology markets, and establish a scientific and technological innovation alliance mechanism.

Build a diversified technology and financial chain. Increase financial investment in science and technology, establish a mechanism for stable growth of financial investment in science and technology, and ensure that the growth rate of science and technology funds increases in tandem with the revenue of the general public budget. Give play to the guiding role of financial funds, and explore the establishment of a guidance fund for the development of high-tech industries. Deepen the promotion of the innovation voucher system, broaden the scope of support, and strive for cross-regional universal exchange. Develop science and technology financial products such as science and technology guarantees, technology insurance, and patent pledges, improve the financing risk sharing mechanism, strengthen the precise docking of financing needs between financial institutions and science and technology enterprises, and fully support enterprises to connect with multi-level capital markets.

Create a good atmosphere for innovation and entrepreneurship. Establish a "double pairing" mechanism for linking county leaders and "double competition" for enterprise innovation. Implement a fault-tolerant mechanism for major innovative projects and projects, explore the implementation of cost-sharing mechanisms for entrepreneurial failures such as entrepreneurship guarantee funds, and establish an assistance mechanism for entrepreneurial failures. Strengthen intellectual property protection, and establish national intellectual property pilot county and provincial rapid rights protection centers. Carry out activities such as the evaluation and ranking of the innovation ability of science and technology enterprises and the commendation of advanced figures in scientific and technological innovation, carry forward the spirit of science and craftsmanship, and create a social atmosphere that advocates innovation and entrepreneurship.

IV. Develop a modern industrial system to create a new benchmark for hardcore manufacturing

Implement the Industry 4.0 development strategy, with the goal of moving towards the middle and high end of the industrial chain and value chain, improve the stability and competitiveness of the industrial chain and supply chain, promote the high-quality development of the manufacturing industry, enhance the specialization level of the modern service industry, promote the construction of high-level industrial platforms, and accelerate the construction of a competitive modern industrial system.

(4) Build a "3+ ∞ +X" modern industrial system

Unswervingly build a strong manufacturing county, consolidate and upgrade the four advantageous industries such as rubber and plastic industry, power energy industry, automobile and motorcycle parts, and equipment manufacturing, guide and support the development of three characteristic areas such as biomedicine, storm suits, and new building materials, and accelerate the cultivation of several emerging industries such as new materials, marine equipment, and general aviation industry.

Consolidate and upgrade the four advantageous industries.

Rubber and plastic industry. Focus on promoting the upgrading of traditional products, developing high-performance new products, research and development of new rubber and plastic materials, etc., create a "quality, intelligent and green" rubber and plastic industry cluster, and strive to become a leading green high-precision special new rubber products manufacturing base in China. By 2025, the total industrial output value of the rubber industry will reach 200 billion yuan, and the output value above the scale will be more than 100 billion yuan.

Power energy industry. Vigorously develop nuclear power and its related industries, and guide the industrial chain of nuclear power and thermal power to extend forward. Steadily develop wind, photovoltaic, tidal power and pumped storage, build a clean energy industry chain covering nuclear power related, energy equipment and components, and strive to become a national leading green energy valley and Zhejiang clean energy base. By 2025, the output value will be more than 100 billion yuan.

Auto and motorcycle parts industry. Accelerate the adjustment of industrial structure, focus on the development of molds, body, shock absorption, clutches, fasteners and other key parts, explore the establishment of an online auto and motorcycle parts trading market, launch the auto and motorcycle parts brand, and strive to become a well-known auto and motorcycle parts industry production base at home and abroad. By 2025, the output value will be more than 100 billion yuan.

Equipment manufacturing industry. Concentrate on the development of motors, rail transit, new energy transformers and other advantageous fields, focus on the cultivation and development of customized production lines, raw material sorting production lines, new energy transformers and other high value-added products for specific uses such as motors, handicrafts, sanitary ware, etc., and strive to become a R & D and production base of equipment manufacturing characteristic products with certain domestic influence. By 2025, the output value will be more than 100 billion yuan.

Box 3: Development orientation and layout of four advantageous industries		
	Focus on development orientation	Industrial space layout
Rubber and plastic industry	Optimize traditional rubber and plastic products, and develop products used in high-speed rail, subway, automobile, aerospace, marine ships and other fields. Develop high-performance new products, make full use of intelligent molding continuous vulcanization technology, rubber-metal composite technology, composite conductive rubber and other new technologies, and focus on breakthroughs in new products such as high strength, high wear resistance, high temperature resistance and high corrosion resistance. Research and development of new rubber and plastic materials, consolidate the foundation of synthetic rubber industry, research and development of high-tech products and liquid rubber products.	Relying on the foundation of the county's rubber characteristic industry, plan the spatial layout of the rubber and plastic industry of "two parks, one corridor and multiple points", and vigorously promote the construction of three-dimensional rubber industrial park, Yuanchuang rubber high-tech park, Haiyou-Zhuao Sanmen rubber and plastic industry corridor, as well as rubber small and micro parks such as Jiexi Rubber Small and

		Micro Enterprise Park (Phase II) and Wuao Rubber Small and Micro Park.
Electricity energy	Focus on promoting projects such as Sanmen Nuclear Power Phase II and Phase III and Sanmen Pumped Storage Power Station. Promote the planning and implementation of clean energy projects such as wind power, agricultural solar complementarity, fishery solar complementarity, and biomass power generation.	Based on the existing power energy industry base such as nuclear power and thermal power in Jianyu Town and Puba Port Town, expand the ridge of Huangshui Mountain, Longmu Mountain and Sanmen Sea area to vigorously develop wind power projects.
Auto and motorcycle parts	The key development includes shock absorption (including suspension system, suspension system, sensing system, etc.), mold (including large injection mold for automobile, new precision mold, mold steel, etc.), fastener (including fixed bracket screw, high-standard automotive rivet, etc.), clutch (including clutch assembly, clutch plate, etc.) and other subdivided parts production.	Based on the existing foundations such as Haiyou Street, Zhuao Town, and Coastal Industrial City, we will build an innovative service complex for the auto and motorcycle parts industry and build an auto and motorcycle parts industry cluster.
Equipment manufacturing	Focus on key basic components, focus on the development of precision transmission, liquid-gas-tight components and systems, servo control mechanisms and embedded software. Focus on sleepers, railway shield segments, etc., through the development and production of core products and systems, to achieve full coverage of products in the rail transit industry. Vigorously develop The characteristic industry of new energy transformers has driven upstream and downstream supporting enterprises to become bigger and stronger, forming a transformer characteristic industrial cluster led by Sanchange Technology.	Relying on the development foundation of the equipment manufacturing industry in the coastal industrial city, vigorously build special parks such as the high-tech industry incubation park in the development zone, the Fenjiao Electrical Small and Micro Enterprise Park, and the Taizhou Beibu Bay Area Mechanical and Electrical Small and Micro Park.

Guide the development of the three characteristic areas.

Biomedicine. Actively explore breakthroughs in new fields such as marine biomedicine and marine functional food. Relying on leading enterprises, focus on building a pharmaceutical manufacturing industry chain, and accelerate the cultivation of high-end medical devices, pharmaceutical health and other industrial chains. By 2025, the total industrial output value above the scale will be more than 50 billion yuan.

Storm jacket. With the goal of creating the most influential "famous city in the storm clothing industry" in China, we will focus on increasing the research and development and application of functions such as fast drying, cold resistance, and breathability, and promote the construction of independent brands. By 2025, the total industrial output value above the scale will be more than 50 billion yuan.

New building materials. Focus on the development of intelligent sanitary ware, prefabricated building materials, special pipe piles, new walls, sand and gravel and standardized components, and expand the production and application of new and green building materials. Expand the prefabricated construction manufacturing industry, do the excellent design and application industry, do the special

supporting industry, and grow the upstream and downstream industrial chain. By 2025, the total industrial output value above the scale will be more than 50 billion yuan.

Box 4: Development direction and layout of three characteristic areas		
	Focus on development orientation	Industrial space layout
Biomedicine	Closely docking with Taizhou and Ningbo marine biological medicine industry, actively exploring new fields such as marine functional food, marine biomedicine, and biomedical materials. Strengthen the upstream and downstream extension and development of the pharmaceutical manufacturing industry chain, and promote the integrated development of pharmaceutical manufacturing, medical devices, and pharmaceutical health.	Relying on Binhai Science and Technology City, Coastal Industrial City and other blocks, promote the development of leading enterprises such as East Asia Pharmaceutical and Hengkang Pharmaceutical, introduce and cultivate supporting affiliated enterprises, accelerate the construction of Sanmenwan Medical Device Industrial Park, Sinopharm Health Industrial Park and other projects, and create a biomedical industry agglomeration area.
Storm suit	Strive to improve original design capabilities, agile manufacturing capabilities and channel control capabilities, support brand influence, and build a storm jacket industry development system that is "based on quality assurance, featuring original design, taking brand value as the core, scientific and technological innovation as the driving force, and relying on regional collaboration".	Relying on the advantages of the storm clothing industry, taking the construction of the provincial storm clothing industry innovation service complex as an opportunity, attract and cultivate the storm clothing fashion town, encourage the development of enterprise parks, actively build small and micro parks, jointly build and promote enclave parks, and strive to form a multi-level modern industrial park pattern of "fashion town as the window, large enterprise park as the core, small and micro park as the foundation, and enclave park as a supplement".
New and new building materials	Encourage leading enterprises to introduce international advanced production lines and transform and upgrade the intelligent bathroom industry; Cultivate local enterprises that can integrate design, production and construction, and achieve zero breakthrough in prefabricated construction enterprises; Guide some enterprises to transform the production of prefabricated building components; Encourage enterprises to use local resources and renewable resources to prepare new wall materials. With the help of its Toushan's large-scale construction stone mine and Jianyu's idle sea wharf, it has actively built a large-scale ore production, processing, collection and transportation base in southeast Zhejiang.	Relying on the advantages of mineral resources, actively develop related industries such as deep processing and transportation of mineral products, and promote the transformation and upgrading of the mining industry. Actively extend the industrial chain, vigorously develop the new building materials industry, rely on leading enterprises such as Goldman Sachs Steel Structure, accelerate the construction of prefabricated building industrial parks, and create a production base integrating R&D and design, component production, display and trading, and distribution services.

Cultivate and develop a number of emerging industries.

Materials. Adhere to the direction of high performance, multi-function and greening, and focus on the development of new nanomaterials such as graphene, and functional new materials such as polypropylene capacitor films.

Marine equipment. Improve the shipbuilding industry, deepen the application and promotion of 5G technology in welding automation equipment, rust removal and painting robot equipment, digital shipbuilding systems, and intelligent detection of shipyards, and promote the construction of a smart green manufacturing system in the shipbuilding industry.

General aviation industry. Strive to build a second-class general airport and create a characteristic aviation town. Develop the service passenger transport industry, taking into account the tourism industry, forest fire prevention, emergency disaster response, etc.

(4) Enhance the economic strength of "3+◇+X" services

Focus on the development of commercial and trade services, modern logistics, headquarters economy, financial services, cultivate and expand the urban economy, focus on global tourism, health and elderly care, community services, improve quality and happiness economy, explore several emerging service industries such as platform economy, online economy, and new retail, and plan smart services in a forward-looking manner.

Cultivate and strengthen the urban economy. With improving the level of urban development as the core, gathering popularity and adding vitality as the starting point, focusing on four major industries such as commercial and trade services, modern logistics, headquarters economy, and financial services, we will strive to enhance the attractiveness of the city and enhance the protection of people's livelihood.

Business services. Focusing on the central urban area, Jianyu and key towns of Puba Port, strengthen the supply of commercial and trade service facilities, create consumer fashion landmarks, cultivate urban smart business districts, and fully promote service sharing and the integration of industry and city.

Box 5: Key areas of modern commerce and trade

Central urban area: with the West District, Dahutang and Binhai New City as key areas, enhance the supply of commercial and trade facilities, and build a three-gate urban business district, characteristic commercial street and night market block with identification. Integrate the Sanjiangkou block, focus on building a central business district, build landmark facilities such as water-friendly platforms and urban balconies, improve the quality level of the city, introduce large-scale commercial complexes, cultivate urban smart business districts, and create a new city style of "both sides of the three rivers".

Jianjiao Town: Improve and expand the public service functions of the town culture and art center, Omaat Cinema and two comprehensive markets, accelerate the transformation and upgrading of Qinjiang Avenue, promote the construction of neighborhood centers, talent apartments, financial supermarkets and other supporting facilities, and strive to build a pioneer town for the integration of industry and city.

Puba Port Town: Orderly promote the construction of Donggang Xintiandi and neighborhood centers, accelerate the layout of commercial and trade service complexes and other facilities, build a comprehensive service center serving emerging industries, and strive to build a **Puba Port** commercial, trade, commerce, and science and technology innovation cluster.

Modern logistics. With the construction of key projects such as Yunda Group (Sanmen) Industrial Park and Vanke Logistics Park as the core, the radiation will drive the construction of logistics bases such as Jianjiao Port, Central Urban Area, Puba Port and Binhai New City, and build an important node of smart logistics in southeast Zhejiang.

Box 6: The main layout of the logistics base

Urban comprehensive logistics base: relying on high-speed entrances and exits, railway stations to build modern logistics industry agglomeration areas, logistics business operation platforms and public logistics information platforms, to build an important logistics supporting service base in northern Taizhou.

Binhai New City Logistics Base: Relying on G228 National Highway, it provides supporting logistics services for the development of high-tech industries such as equipment manufacturing, new energy and nuclear technology application in Binhai New City.

Jianjiao Port Logistics Base: Improve the construction of Shugang Highway, support the development of bulk material distribution infrastructure, promote the development of Longshan operation area in the long term, promote the construction of enterprise terminals such as Hengtou Industry and Trade, Tongda Logistics, etc., and build a coastal public, iron and water combined transport logistics distribution center.

Puba Port Logistics Base: Relying on the coastal expressway Puba Port Interconnection Entrance, we will build an important public railway intermodal logistics distribution base in Taizhou, accelerate the construction of Vanke Logistics Park and e-commerce supply chain operation center, and optimize and improve the supply chain system with logistics as the core.

Headquarters economy. Cultivate and strengthen local headquarters enterprises, attract the world's top 5 enterprises and the top 100 national enterprises to set up regional headquarters in our county, and accelerate the construction of the economic building project of Kaiyu Mountain Villa headquarters, Focus on the development of logistics headquarters, tourism headquarters, construction industry headquarters, etc.

Financial financing services. Carry out innovation in financial products and services, improve the construction of the credit system for small and micro enterprises, innovate financial products to support agriculture and benefit farmers, and vigorously develop "blue credit". Encourage the development of diversified financing channels such as industrial funds, venture capital funds, and small loans, and explore and promote the innovative application of science and technology finance.

Do special promotion of happiness economy. Comply with the people's demand for a better life, amplify the characteristic advantages of "fresh sweetness + happiness", focus on the three major industries of global tourism, healthy elderly care, and community services, develop a characteristic and high-quality happy economy, and effectively enhance the people's sense of happiness and satisfaction.

Global tourism. With the establishment of provincial-level all-region tourism demonstration counties as the starting point, the implementation of the scenic spot service improvement project, the realization of scenic spot upgrade A, service upgrade, and global scenery, and strive to create six classic tourism products.

Box 7: Six classic tourism products

Enjoy a sweet journey. Integrate fisherman's clubs along Hairun Street, Shaliu Street, Jianyu Town and Puba Port Town to build a number of seafood gourmet characteristic villages. Improve the functions of Sanmen Blue Crab City and create a comprehensive tourism complex integrating seafood trading, seafood cuisine, fishing gear exhibition and sales, marine fishery museum and other functions. Explore new forms of activities such as holding fresh sweet sea fishing, fresh sweet music festival, and fresh sweet sleepless nights, and make deep and thorough "sea, shore, evening" fresh sweet articles.

Enjoy an idyllic tour. With the construction of scenic spots in the whole region as the starting point, promote the implementation of ecological pastoral leisure tourism projects that integrate agriculture, forestry, fishery, culture and tourism, summarize and replicate the experience of the construction of beautiful rural complexes in Yujiaocun, and vigorously develop rural leisure tourism forms such as boutique homestays, leisure farms, forest homes, and colorful fishing villages. Solidly promote the construction of tourism style towns such as Hengdu Shanshui Ancient Town and Huaqiao Pastoral Photography Town.

Enjoy a coastal tour. Build a 5A-level tourist scenic spot on Shepan Island and promote the construction of island parks. Accelerate the construction of Huaguman Island water general airport, explore the use of helicopters, seaplanes, ground effect aircraft, hot air balloons and other new sightseeing vehicles, create new sightseeing products with the theme of low-altitude sea and island viewing, plan to develop high-end coastal tourism products such as sea sightseeing, sea buses, yachts, etc., and create a "golden business card" of three-door coastal tourism.

Le Jian cultural and sports tour. Create sports and leisure boutique routes, and actively develop cultural and sports integrated tourism products such as walking, cycling, cycling, marathon, outdoor development, land and sea fishing, and extreme challenges; Do a good job in holding sports events such as the Cave Gas Volleyball Open and amplify the brand effect of the national "hometown of gas volleyball". Packaging and development of "blue crab strapping", "clams" and "prying oysters" and other interesting offshore tourism projects with distinctive marine characteristics, and the development of sea motorboats, sea paragliding and other water sports projects.

Happy to learn the Red Tour. Relying on the red culture and education base next to the pavilion, Dachen Island will be linked to create a package-type red cultural tourism education experience route, a boutique study tourism route, and a party building and group building study and visit route. Promote the linkage between pavilions and Shepan mountains and seas, and develop multi-article tourism integration boutique routes such as youth study travel demonstration routes, folk customs experience demonstration routes, and photography and beautiful scenery demonstration routes.

Wellness journey. Relying on the "meditation" culture of the two temples of Zhuao (Duobaojiao Temple and Binaiye Temple), we will promote the construction of Tanyou Cultural Square, Dinggong's Former Residence Memorial Hall, Health Care Center and other projects, integrate Xianrenxia rafting, Xiaoxihu and other mountain

and water natural resources, create a safe and quiet high-quality treatment route, and strive to create a "back garden" for leisure tourism in the Yangtze River Delta.

Healthy old ageing. Promote the construction of Sinopharm Health Industrial Park, Dafu Yitian Park, Binhai Health Town, etc., vigorously develop new models such as sports pension, leisure pension, and cultural pension, and actively build a "health care and elderly care type creative tourism complex".

Community service. Strengthen smart community convenience consumption services, cultivate and develop brand chain operations and "Internet + community" new models and new formats of convenient services, promote the supply of various community life services such as intelligent delivery, smart elderly care, and smart parking, build a full-time, all-domain, all-age, all-round community service system, and build "15 Minute Life Circle", to create a group of "neighborhood fingertips" wisdom community.

Explore the development of smart services. Using 5G, big data, artificial intelligence, cloud computing and other new-generation information technologies, we will open up new models and new formats of service economy that integrate online and offline, focus on emerging industries such as platform economy, online economy, and new retail, and vigorously develop digital intelligence "new services".

Platform economy. Actively introduce platform service providers, vigorously develop rural e-commerce platforms, logistics service platforms, cloud service platforms, government service platforms, etc., and cultivate a number of platform economy brand enterprises with distinctive characteristics and strong competitiveness.

Online economy. Vigorously promote emerging service economies such as online shopping, fresh food delivery, online education, and online smart medical care, and guide merchants to achieve two-way integration of "online + offline" and "in-store + home" service upgrades. Increase the promotion and application of new technologies such as AR/VR, broaden the field of experience such as culture, commerce and trade, and tourism, and develop new products and services for immersive experiences.

New Retail. Encourage traditional commercial enterprises to use new technology applications such as e-commerce, mobile Internet, and virtual reality to carry out new formats such as experiential consumption, online and offline integration, and social e-commerce, and actively introduce and promote new retail models such as unmanned supermarkets, unmanned shelves, and smart convenience stores.

(1) Create "◇+X" High-level industrial platform

Strengthen the leading position of Sanmen Economic Development Zone. Deeply promote the integration and upgrading of the Sanmen Economic Development Zone, accelerate the formation of the overall layout of "one district and two pieces", take "one district" as the core and "two pieces" as an important fulcrum, and build an important node of Zhejiang's marine economy and an important engine for the overall development of the Sanmen Bay area, and strive to achieve by 2025, becoming an important growth pole for economic development.

Figure 1 Planning layout of Sanmen Economic Development Zone after integration

Box 8: "One District and Two Pieces" Planning Scope and Industrial Orientation		
	Planning area and four to extent	Industry oriented

The core area of Sanmen Economic Development Zone	The planned area is about 52.6 square kilometers, bordered by Qimen Port in the north, Haiyou Bridge in the west, Taotou Village in the east, and Tingbunzhen Industrial Park in the south.	Focus on the development of rubber and plastics, auto and motorcycle parts, equipment manufacturing, biomedicine, emerging industries and modern service industries, and focus on the construction of science and technology innovation centers and incubators.
Lingang Industrial City Area	The planned area is about 30 square kilometers, including Aokou Tang, Huangmen Tang, Qishitang, Xiasha Tang and Yangshi Tu blocks in the south, and the former shipyard sea area of Liuaio Beitang, Sanmen Nuclear Power, non-basic farmland block of agricultural park, Dashawan industrial cluster area and Liuaio urban development area in the north.	Focus on the development of modern port industries such as ships, high-end marine equipment, port logistics, "agriculture + health care" industries and nuclear power-related industries.
Coastal Industrial City Area	The planned area is about 32 square kilometers, with Fengyuan Shipyard in the east, Dague Mountain in the north, coastal expressway in the west, and Donggang Industrial Agglomeration Area in the south.	Focus on the development of equipment manufacturing, new building materials, rubber and plastics, auto parts, biomedicine and other industries.

Improve the driving effect of X characteristic industrial platforms. Coordinate the development of a number of characteristic industrial platforms such as Sanmen Rubber Industry Transformation and Upgrading Demonstration Base, Yangshi Tulingang Industrial Park, Sanmen Xiantian Agricultural Science and Technology Park, Sanmen Puba Port Modern Agricultural Park, Sanmen Mountain-Sea Cooperative Eco-tourism Cultural Industrial Park, and Dazhoutang Block. Comprehensively improve the construction, operation, standardization and intelligent management level of small and micro enterprise parks.

Box 9: "X" featured platform development and construction focus				
	platform	Basic information	Development orientation	Industry oriented
1	Sanmen rubber industry transformation and upgrading demonstration base	The total area is 8 square kilometers, with the Zhuao-West District Rubber and Plastic Corridor and Yuanchuang Rubber High-tech Park as the carrier	Cultivate thermoplastic elastomer and liquid rubber and plastic production enterprises, and build and put into operation a number of	Develop high-end crawlers, high-speed rail, subway, light rail and other rubber and plastic products

			rubber and plastic small and micro parks	
2	Sanmenyang Tulingang Industrial Park	The land can be developed and utilized for 4 square kilometers, and the cargo ship can be fully navigated by 5,000 tons under flat tide conditions	An important alternative base for major green petrochemical industry	Build a refined chemical and chemical fiber industrial cluster
3	Sanmen Fresh Sweet Agricultural Science and Technology Park	It is located on the north shore of Jiandiao Port, with a total area of 10 square kilometers	Build a benchmark for modern agricultural construction in the province and a demonstration model for the coordinated development of urban and rural areas, and strive to become a national agricultural high-tech industry demonstration zone	Focus on the development of fruits and vegetables, aquaculture, cultivate new business forms such as tourism and tourism, and actively develop the intensive processing of agricultural and sideline products and seafood
4	Sanmen Puba Port Modern Agricultural Park	It is located on both sides of Puba Port, with a total area of 33 square kilometers	Give full play to the advantages of wetland resources and ecological environment at the bottom of the port, and plan to build a provincial-level modern agricultural park	Focus on the development of intensive fishery farming, high-efficiency agriculture, characteristic farms, etc
5	Sanmen Mountain and Sea Cooperation Ecotourism Cultural Industrial Park	It is located on Shepan Island, Sanmen County, with a total area of 3.5 square kilometers	Build a model park for provincial-level mountain-sea cooperation industrial park	Promote island tourism, cultural creativity, sports and health, etc
6	Sanmen Dazhoutang New Material Industrial Park	It is located in the southwest of Binhai New City, with a total area of about 2.33 square kilometers	Based on the advantages of regional resources, strive to build a new material industrial park	Focus on the development of information materials and energy materials

5. Accelerate digital transformation and create a new era of smart empowerment

With transformative thinking and international standards, highlight the role of digital leadership, leveraging and empowerment, accelerate the digital transformation of economy, society and government, promote the transformation of urban energy storage, standardize and order government affairs, and accelerate the construction of "smart three doors".

(1) Vigorously develop the digital economy

Comprehensively promote industrial digitalization. Accelerate the deep integration of 5G, big data, artificial intelligence and the real economy, continue to expand the "5G + industrial Internet" construction team, and take the rubber and plastic products industry as the entry point. Create industry Internet platform samples with regional characteristics. For storm suits, equipment manufacturing and other industries, explore new models such as personalized customization and flexible production. Focusing on auto and motorcycle parts, clean energy and other industries, develop intelligent services based on the whole life cycle of products. Promote enterprises to "go to the cloud and use data to empower intelligence", and explore new intelligent manufacturing models such as "digital workshops", future

factories, and virtual industrial parks. Digitalization empowers small and micro enterprises, compiles the growth index of small and micro enterprises, and improves the service quality and efficiency of the industry.

Actively explore digital industrialization. Accelerate the construction of 5G information industrial parks, focus on the research and development and application of 5G communication facilities, and focus on the development of optical fiber ceramic inserts, electronic devices and Intelligent equipment 5G modules, etc., to optimize and strengthen 5G core devices. Explore the development of the Internet of Vehicles industry, and guide leading enterprises to research and build Internet of Vehicles platforms. Increase the value added of data elements, further promote the open application of public data, increase the value of social data resources, and strengthen the security of data elements.

(2) Speeding up Create smart cities

Comprehensively promote the digital transformation of public services. Expand the digital application of the "city brain" public service field, and build a digital health information service platform, a digital social security comprehensive service platform, and a smart medical insurance service platform. Launch a number of digital application scenarios for life, vigorously develop digital education, digital medical care, digital social security, digital archives, digital poverty alleviation, digital pension and other formats, accelerate the promotion of standardized, intelligent, specialized, humanized, and convenient transformation and upgrading of public services, and build a new ecology of digital society that is compatible with the new era.

Explore the construction of smart city practice areas. Actively explore the future-oriented smart city development, construction and governance model, focus on Haiyou and Hairun streets, and take the lead in planning the "smart city" three-gate practice area. Focusing on the "three and nine scenarios" of future communities, in accordance with the requirements of "5, 10, and 30-minute travel circles", accelerate the start of future community planning and construction.

(3) Promote the transformation of government intelligent governance

Promote the construction of digital government. Innovate and implement the "digital + reform" integrated development mechanism, realize the comprehensive integration of platforms, data and services of various departments, and create a pilot reform of "comprehensive integration and digital empowerment" of government services. Complete systems for open data sharing, strengthen data quality governance, and safely and orderly advance the aggregation and integration of public data and social data. Promote an e-government network security system to protect the security of public data and personal information in accordance with law.

Improve the level of intelligent government services. Promote the iterative upgrade of the government service 2.0 platform system, and continue to improve the three sites of "Zhejiang Liban". Deepen the "one-network office" of government services, explore automated and intelligent approval, and promote business scenarios such as "collaborative office, code office, cross-domain office, and timely office" to improve the convenience, sense of acquisition and satisfaction of the masses and enterprises. Promote the inheritance and reform of "one thing" by digital means, accelerate the realization of "one thing" and the whole process of "one thing" throughout the life cycle of individuals and enterprises "run at most once", and promote the extension and expansion of institutional efficiency, social credit, urban governance and other fields. Actively promote the digital transformation of administrative service centers

in terms of responsibility system, scene layout, service model, service closed loop, talent team, etc., so as to make government services more convenient, intelligent, efficient, and warm.

Strengthen multi-field collaborative application. Strengthen the digital application of macroeconomic operation, finance, taxation, finance and other regions, and improve the predictability, flexibility and accuracy of economic adjustment. Focusing on key areas such as space governance, social services, production safety, and emergency command, plan and build major application projects based on scenario-based multi-service collaboration. Promote the construction of a digital emergency management system, and improve cross-departmental, cross-regional and cross-level collaborative emergency response mechanisms. Strengthen technical support such as geographic information, satellite imagery, drone patrol, and intelligent video surveillance, and establish and improve a scientific decision-making assistance system for emergency command.

(4) Layout of digital infrastructure

Promote the construction of 5G networks. Accelerate the large-scale deployment and pilot construction of 5G networks, build base station antennas, small and micro base stations, and communication network equipment, promote the wide application of 5G technology in economic transformation, urban management, people's livelihood improvement, grassroots governance, etc., and achieve key application scenarios. The main demand nodes are basically covered, and we will work together to create a new benchmark of "digital three doors".

Promote the upgrade of IoT facilities. Focus on urban construction, medical field, digital security and other fields, accelerate the construction of IoT base stations, actively deploy intelligent sensors, promote the deep integration of 5G and IoT vertical integration applications, and create a secure IoT interconnection architecture and application platform based on identification technology.

Promote the construction of interconnected facilities. Comprehensively promote the large-scale deployment and pilot construction of a new generation of IPv6-based Internet, focus on new smart cities, artificial intelligence, industrial Internet, Internet of Things and other fields, and strengthen the coordinated development of IPv6-based terminals. Strengthen the construction of information infrastructure in remote rural areas, mountainous areas and other areas, optimize and improve the level and depth coverage of rural optical fiber networks, and expand universal rural telecommunications services.

6. Comprehensively deepen market reform and stimulate new vitality of the private economy

Firmly adhere to the "two unwavering", strengthen reform and empowerment, further stimulate the innovation and entrepreneurship and creativity of private economic market entities, improve the market-oriented allocation mechanism of factors, continue to optimize the business environment, and create a strong high-quality development of the private economy in the new era County.

(1) Vigorously stimulate the vitality of market entities

Improve the cultivation mechanism for market entities. In-depth implementation of the "1211" enterprise cultivation project, cultivation and expansion of head enterprises, docking with the provincial "Phoenix Action" and "Eagle Plan", strengthening policy support and precise services, and cultivating a number of flagship enterprises. Vigorously cultivate small and medium-sized enterprises, "one enterprise, one policy" to grasp the construction of enterprise echelons such as specialized and special new "little

giants" and "single champions", establish a cultivation list, and strengthen the three sections of manufacturing "single champion" enterprises.

Continue to promote the reform of the property rights system. Fully implement the regulations on promoting the development of private enterprises, further promote the share reform of enterprises, and promote the establishment of a modern enterprise system with clear equity, reasonable structure and fine management. Encourage private enterprises to introduce strategic investment and promote employee shareholding. Actively promote enterprises that meet the requirements of the Science and Technology Innovation Board to carry out institutional innovation with different rights of the same shares, encourage enterprises to reform shares and list shares, and strive to achieve full coverage of the share reform of enterprises on the regulations.

Promote the mutual promotion of "state-owned assets" and "people's capital". Give full play to the guiding and leading role of the SASAC, deepen the market-oriented transformation of state-owned enterprises and the reform of mixed ownership, and optimize the layout and structure of state-owned capital. Broaden the channels for private enterprises to participate in the reform of state-owned enterprises, and accelerate the elimination of institutional blockages in the participation of the private economy in fair competition in accordance with the principles of "competition neutrality" and "non-prohibited access", and continue Deepen the reform of state-level private investment and increase the proportion of private capital in mixed-ownership enterprises.

(2) Promote the reform of market-oriented allocation of factors

Removal of market entry barriers. Explore new models of comprehensive supervision, credit supervision, and coordinated supervision. Improve the modern market system and increase the market-oriented reform of factor prices. Study and introduce policies and measures to gradually abolish or completely relax restrictions on the shareholding ratio of foreign investment in some fields of manufacturing and service industries, and further expand the opening channels for strategic adjustment of economic structure and industrial optimization and upgrading.

Vigorously promote capital supply. Deepen and promote the reform of fiscal expenditure, and build a fiscal policy system and fund management mechanism with performance as the core and concentrated financial resources to do major things. Vigorously develop equity financing, fully implement equity registration and custody, and broaden enterprise financing channels . Expand the scale of financing in the bond market. Give play to the role of the host securities firm and strengthen the reserve of innovative and select companies. Guide financial institutions to use various financial innovation tools to provide financial support for the development of small and medium-sized enterprises. Deepen the reform of movable property pledge financing and supply chain financial services.

Promote the market-oriented allocation of factors. Deepen the reform of "Mu Uniformity on Heroes", continue to implement the differentiated allocation mechanism of factors based on evaluation results, and promote the concentration of factors in advantageous regions, advantageous industries, and advantageous projects. Improve the land management system, establish and improve the standard land gradient transfer plan for industrial projects, and promote "standard land" through "commitment performance + credit evaluation + data application" Credit supervision covers the whole life cycle of the project, and

establishes a "standard" digital map for investment promotion. Deepen the reform of the right to use, dispose of and benefit from scientific and technological achievements, and support the market-oriented operation of independent intellectual property rights in the fields of major technical equipment and key new materials.

(3) Make every effort to build a county with the best business environment

Deepen the reform of business environment facilitation. Deepen the reform of "decentralization, management and service", promote the "running at most once" to deepen and solidify, implement the "10+N" facilitation reform to optimize the business environment, and strive to create a market-oriented, rule-of-law, and international business environment. Focus on the whole process from business start-up to cancellation, further streamline the process and shorten the time limit. Improve the business environment assessment mechanism, focus on the "one thing" of the whole life cycle of the enterprise to evaluate and promote reform, improve and increase efficiency, and strive to create a satisfactory investment place for enterprises. Deepen the reform of the commercial registration system, explore simplified examination and approval with the commitment system as the core, and build a "one network" for administrative examination and approval. Deeply promote the reform of "comprehensive and integrated" administrative law enforcement, implement "comprehensive investigation once", and achieve full coverage of government supervision.

Build "pro" and "Qing" government-enterprise relations. Improve the mechanism for the whole society to care for entrepreneurs, strengthen the regular communication between the government and entrepreneurs, establish a system for party and government leaders to contact private entrepreneurs, hold regular entrepreneur forums, and explore the establishment of normative procedures for the government's major economic decisions to actively ask entrepreneurs for advice. Actively play the role of the bridge between the Federation of Industry and Commerce, the Federation of Enterprises, and the Chamber of Commerce of Industry and Commerce. Establish a "Qingqing Online" government and enterprise service platform, integrate high-frequency services benefiting enterprises, and strengthen the sharing of policy resources benefiting enterprises.

Advance the reform of credit management systems and mechanisms. Strengthen the establishment of Public Credit Information platforms and standards, deeply docking with provincial and municipal Public Credit Information platforms, strengthening the aggregation, opening, and sharing of credit information, and promoting all-round creditworthiness, full data creditworthiness, and the use of credit by the whole society. Form a full-closed-loop application of the credit system in areas such as approval and supervision. Establish a public credit evaluation system, establish and complete industry credit evaluation systems and enterprise risk classification management mechanisms, and comprehensively promote the application of credit evaluation results in areas such as administrative approval, law enforcement supervision, and access to credit. Promote agreements on mutual recognition of the Sanmenwan Seriously Untrustworthy List.

VII. Deeply integrate into the integration of the Yangtze River Delta and enhance the opening of new space in the Bay Area

Adhere to the development orientation of "linking Sanmen Bay, connecting Shanghai-Ningbo boats, and integrating into the Yangtze River Delta", fully release the major strategic overlapping advantages such as the "Belt and Road", the regional integration of the Yangtze River Delta, and the "four major" construction of the province, explore the construction of a new development pattern of dual circulation, and make every effort to build a vibrant emerging growth pole in northern Taizhou.

(1) Strengthen regional cooperation and exchanges

Fully integrated with the greater Shanghai. Strengthen top-level design, and actively promote all-round and in-depth exchanges and cooperation between the two places in industrial development, investment promotion, talent scientific research, and information exchange. Relying on the Shanghai high-level open platform, docking high-end resources at home and abroad, and strengthening in-depth cooperation with R&D institutions and innovation teams in Shanghai. Deepen friendly cooperation with Shanghai Municipality, Minhang and Qibao Town, and promote the joint construction of cooperative industrial parks between Taizhou Beibu Bay Area and Xinzhuang Industrial Park. Plan to build Sanmen Shanghai Global Investment Center, and actively carry out precise investment promotion and industrial chain investment promotion. Plan to set up the Sanmen Shanghai Talent Exchange Center, strengthen cooperation with Shanghai University, accelerate the construction of a "talent enclave" in Shanghai, and strengthen the integration of platforms, activities and intermediaries.

Fully docked with Ningbo metropolitan area. Give full play to the location advantages of "Beirong Ningbo", jointly build projects, gather resources, and be a vanguard of opening up and integration. Introduce the implementation plan of the Ningbo-Taiwan Integration Cooperation Pilot Zone, grasp the construction of the Shanghai-Ningbo Cooperation Industrial Park, deepen cooperation in the fields of industrial cooperation, people's livelihood services, and factor circulation, and achieve more landmark results. Promote the implementation of projects such as the southern extension of the Shanghai-Jiayong high-speed railway, and build a "Sanmen Bay half-hour traffic circle". Actively build Xiangshan, Ninghai and Sanmen "Shanhaimen" boutique coastal tourism routes, and create regional tourism cooperation brands.

Deepen the opening up and cooperation of Sanmen Bay. Promote the coordination of strategies, policies and mechanisms, coordinate and optimize the layout of productivity in the Bay Area, improve the long-term mechanism for regional cooperation and coordination, realize planning integration, project joint planning, transportation and industrial coordination, implement a number of landmark projects, and build a model area for cross-regional Bay Area construction in the province.

(2) Enhance the smooth flow of economic circulation

Actively expand the domestic market. Implement the three-door product marketing world action, make full use of the domestic marketing network resources of leading enterprises, form marketing alliances in the same industry or cross-industry of enterprises, and jointly expand the domestic market. Support enterprises to carry out "product mark" Zhejiang manufacturing brand certification, and accelerate the "same line and same standard and same quality" of domestic and foreign products. Expand online cooperation channels, guide foreign trade enterprises to strengthen cooperation with large domestic e-commerce platforms, display and sell high-quality export products online and offline, and encourage and guide foreign trade enterprises to expand domestic sales business.

Promote the high-quality development of foreign trade. Promote "excellent entry and excellent output", further increase the proportion of exports of mechanical and electrical and high-tech products, expand the scale of export of storm jackets, increase support for key exhibitions, consolidate the European and American markets, and continuously explore emerging markets such as countries along the "Belt and Road" and RCEP. Encourage enterprises to use cross-border e-commerce, online exhibitions and other means to expand sales channels, and increase the support of credit insurance for foreign trade export enterprises. Promote international cooperation in the rubber industry and promote the construction of rubber branch of

Sino-German (Taizhou) Industrial Park. Plan to build an international cooperation industrial park for equipment manufacturing.

Vigorously increase the level of consumption. Actively carry out the creation of "global assured consumption", promote the optimization and upgrading of consumption structure, and vigorously cultivate consumption hotspots such as pension, cultural tourism, health, research and education, childcare services, and rural consumption. Cultivate and upgrade a number of smart business districts and commercial complexes, create a number of landmark characteristic blocks, form a number of Internet celebrity check-in locations covering "food, shopping, tourism, entertainment, culture and sports", vigorously develop the traffic economy, and promote the formation of new consumption formats such as holiday economy and night economy.

Strengthen efforts to attract investment. Strengthen the "No. 1 Project" for investment promotion, improve investment promotion policies, deepen the reform of investment promotion systems and mechanisms, improve investment promotion assessment mechanisms, smooth the channels for obtaining and sharing investment promotion information, and flexibly use industrial chain investment promotion, headquarters economic investment promotion, business investment promotion, and investment promotion of all employees to improve the effectiveness of investment promotion. According to the functional layout, planning positioning and industrial development direction of each industrial platform, improve the efficiency of the whole process from planning to implementation. Carry out the action of attracting investment and multiplying large projects, make every effort to introduce a number of large enterprises and good projects with great regional influence, strong industry driving force and high future growth, and strive to introduce a number of modern agriculture, service industry projects and cultural tourism projects.

(3) Build a high-level open platform

Deepen the construction of free trade zone linkage innovation zone. Improve supporting implementation policies and accelerate the replication and promotion of the reform experience of the free trade zone. Strengthen the linkage and cooperation between the three major areas, carry out differentiated and characteristic reform exploration, and form a policy service system that is compatible with advanced international rules. Based on the advantageous industries of foreign trade export in our county, we will screen cross-border e-commerce excellent products and form a cross-border e-commerce industrial park focusing on transportation facilities, intelligent bathrooms, outdoor leisure (storm suits), and auto and motorcycle parts. Actively introduce cross-border e-commerce incubation platform-level enterprises, promote the implementation of the "Kirin Plan", promote the construction and improvement of cross-border e-commerce ecosystem, improve cross-border e-commerce logistics network, and support cross-border e-commerce incubation and supply chain platform construction.

Improve the opening level of Jiandiao Port. Seize the opportunity of Jianjiao Port to become a national first-class open port, give full play to the role of Ningbo-Zhoushan Port as a feeding port, participate in the integrated construction of ports in the Yangtze River Delta, improve the port collection and distribution system, promote the construction of Liuaio Beitang Operation Area and Niushan Operation Area, vigorously develop modern port industries such as port logistics and marine equipment manufacturing, and build a logistics distribution center for bulk commodity ports along the coast of central Zhejiang. Strive to exceed 2500 million tons of cargo throughput by the end of the "14th Five-Year Plan".

<p>1. Accelerate the construction of the Shanghai-Ningbo-Taiwan Cooperation Industrial Park, actively take the lead and try first, explore innovative long-distance cooperation models, take the initiative to undertake the spillover of industry, services and innovative functions in the Yangtze River Delta region, especially Shanghai, improve the ability to link high-quality resources such as technology, talents, capital and information, and build a high-level cooperation demonstration zone in the Yangtze River Delta region.</p> <p>2. Promote the construction of the Sanmen Area of the Taizhou Linkage Innovation Zone of the Zhejiang Free Trade Zone, optimize the functional layout of the three major blocks of Binhai Science and Technology City Block, Shepan Area and Liuaao Area, and strive to build an important economic node, a new highland of high technology and a national medical care cluster in the Yangtze River Delta.</p> <p>3. Build a Jiandiao port area and a national first-class open port, accelerate the upgrading of the planning level of the Jiandiao port area, seek cooperation with Ningbo-Zhoushan Port, promote land-sea linkage and interconnection, and form an open pattern of "connecting Taizhou in the south, Ningbo in the north, Jinyi in the west, and the Maritime Silk Road in the east".</p> <p>4. Establish Sanmenwan National Tourism Resort, explore the co-creation of synergistic cooperation mechanisms, promote long-term cooperation between our county and Ninghai County and Xiangshan County in tourism routes, source markets, public services, etc., and create a provincial-level Sanmenwan Bay Area Tourism Pilot Zone with Shepan Island, Huaguman Island, Liuaao Peninsula and Shepanyang as the core blocks. Create a holiday tourism destination in the Yangtze River Delta Bay Area.</p>
--

8. Build a charming mountain and sea city and shape a new form of urban and rural development

We will unswervingly take the new urbanization path with people at the core, promote "secondary urbanization", implement the strategy of "small counties and big cities", build a spatial development pattern of "one core, two cities and multiple poles", and build a high-quality dynamic city with integrated development of Hong Kong, industry, city and bay.

Figure 2 Overall pattern of spatial development in Sanmen County

(1) Enhance the functions of the "one core" central urban area

Optimize the spatial layout of the central urban area. Adhere to the development strategy of "linking mountain cities, streams and harbors, and tiantang, optimizing the ecological pattern, and promoting the integration of urban landscapes", and form a development structure of "**one heart, two belts and three districts**". **One Heart: The New Core of Sanjiangkou City.** Launch the development of the Sanjiangkou block, develop around the banks of Zhuyou River and Tingyou Creek, jointly develop Dahutang, Fengkengtang, railway station yard and other blocks, vigorously develop modern service industry, and shape the new core of Sanjiangkou city based on existing administrative and cultural functions and future business and industrial service functions. **Two belts: Tingyou Creek-Zhuyou Creek core function development belt and Qingxi urban and rural pastoral development belt.** The southern part relies on Tingyou Creek, Zhuyou River and other blocks to connect the Haiyou Port, gather core urban functions such as industry, commerce, culture, administration, and residence, and connect and serve various

functional sectors to form a link for the development of core functions. Relying on Qingxi Block, the north connects Qimen Port to tap the development potential of emerging industries, ecological pastoral gardens and charming villages, improve the construction of public service facilities, integrate urban and rural areas, and create an urban and rural pastoral development belt. **Three districts: the western old town, the central core urban area, and the eastern Binhai New Area.** The western part will improve the quality of commercial and residential areas in urban areas, build a comprehensive service center for the old city, strengthen transportation and factor connections in the central region, optimize cultural and educational public services, gather urban population, and shape the future core urban area of Sanmen, and the eastern part will actively integrate into the Shanghai-Ningbo and Taiwan development corridor by relying on the advantages of the harbor and the foundation of scientific and technological innovation, improve the level of industrial development, and build a Binhai New City area.

Enhance the first place in the central urban area. Through "central huddling, east-west linkage, and radiation driven", the integrated development of the three streets of Haiyou, Hairun and Shaliu will be promoted, and the coordinated development of the two suburban townships of Tingbean and Zhuaao will be promoted by radiation. Accelerate the construction of the road on the north shore of Haiyou Port, the bridge between the two shores of Haiyou Port, and the road from Shaliu to Binhai New City, and open up rapid transportation corridors in urban areas. Actively promote the transformation and upgrading of Chengdong Block, Old East Station Block, Hanging Zhu Block, etc., and introduce the construction of commercial complex projects. It plans to promote the development of Sanjiangkou, Xujiatang to Huluqiao blocks, and create a landmark node that relieves the old city and connects the new city. Comprehensively carry out "urban physical examination" and promote urban organic renewal. Carry out actions to improve the quality of urban public space, implement projects such as urban greenway construction, night lighting improvement, and pocket park construction, continue to carry out the revolution of "property, public toilets, garbage, and parking", and improve the level of intelligent and refined urban governance.

Box 11: Urban renewal projects
<p>(1) Continuation category</p> <p>Sanmen County Passenger Station Reconstruction and Expansion (Urban and Rural Bus Integration): Main Station Annex Building and Supporting Decoration Project; Supporting projects of transportation systems; West District Station Construction Project; renovation of the old city station; Railway Station Passenger Hub Project; Site charging pile layout project. (Responsible unit: County Communications Investment Co., Ltd.).</p> <p>(2) Implementation class</p> <p>Municipal renovation and upgrading project of coastal industrial city area of Beibuwan District of Taizhou City: road surface repair, street lamp construction, rainwater pipe network repair, site leveling, etc. in the park. (Responsible unit: Coastal Industrial City Development Service Center).</p> <p>Sanmen County Old Community Renovation Project: Complete the renovation of 48 old communities in our county. (Responsible unit: County Construction Bureau).</p>

Sanmen County urban sewage pipe network construction project: 142 kilometers of supporting sewage pipe network in four factory areas, including new or reconstructed sewage treatment plant, Donggang sewage treatment plant, Jianyu sewage treatment plant, and coastal industrial city sewage treatment plant. (Responsible unit: County Construction Bureau).

Zhongtian Rende Urban Complex Project: The construction includes Deep Blue Plaza, training center, apartments, shopping malls, residential areas, kindergartens, etc. (Responsible unit: Economic Development Zone Management Committee).

(2) Improve the level of integration of "two cities" and cities

Adhere to the principle of agglomerating production with Hong Kong, revitalizing the city with production, promoting the port with the city, expanding the size of the town with the integration of industry and city, breaking through the bottleneck of "having a city without a production and having a city without a city", compiling a high-standard overall plan for land and space, coordinating the layout of industrial land and other land uses, optimizing and adjusting the urban layout form, and forming a development pattern of "two cities flying together" integrating Hong Kong, industry, city and bay. **"Jianjiao Town + Lingang Industrial City"**. Liuaio in the north, Aokou Pond in the south, Huangmentang in the west, and Shatang in the east, constructing a development pattern of "one city and multiple points", with Jiandiao Port as the core, optimizing the layout of land use such as port industry and warehousing. Seize the strategic opportunity of Jiandiao Port National Class I Open Port approved by the State Council, and Liuaio Block selected as Taizhou Linkage Innovation Zone of Zhejiang Free Trade Zone, optimize the city's comprehensive service functions, create a national marine economic demonstration zone, and build a new city of central seaport. **"Puba Port Town + Coastal Industrial City"**. Optimize the spatial layout of group development, accelerate the improvement of infrastructure, improve the quality of environmental functions, promote the construction of "future communities" in the new urban area of Puba Port, and promote the standards of provincial small cities From a town to a city, accelerate the construction of a sub-center of the county, and build a southern coastal harbor city.

(3) Shape "multi-polar" characteristic township brands

Relying on unique resources, focus on guiding Zhuao, Tingbean, Hengdu, Huaqiao and Shepan to build unique characteristic townships. **Zhuao Town:** Focusing on the revitalization of "industrial important towns", strengthen the cultivation of "leading enterprises" benchmarking, promote the integration of small and micro parks, promote the development of new and old town areas, create a rubber industry as the feature, take into account leisure vacation, Key towns with functions such as commerce and logistics. **Tingbean Town:** Deepen the "red business card" effect, actively promote the construction of red culture and education bases, integrate and upgrade the former site of the "CPC Third Work Committee", and raise the advantages of "red, green and blue ancient integration" and "agriculture, culture and tourism", and strive to make a first demonstration for the revitalization of special types of areas in the province. **Hengdu Town:** Optimize the characteristic brand of "Love Hengdu", actively explore and promote the construction of future rural experimental areas with art empowerment, take the road of community-based and community-based artistic development of ancient villages, and create a characteristic town with mountain and sea tourism, culture and art, and ecological agriculture as the main functions. **Huaqiao Town:** Create a characteristic brand of "Drunken Beautiful Flower Bridge, Health and Wellness Resort", build a national agricultural characteristic town around the construction of "Maritime Pastoral Photography Town", and create a

characteristic town with creative cultural tourism, ecological agriculture, health and leisure as the main functions. **Shepan Township:** Strive to create two business cards of national 5A-level scenic spots and national tourist resorts, build ten provincial island parks and provincial tourist resorts, build the first stop of Taizhou Gold Coast tourism in the north, and create a characteristic town with island tourism, military research and modern fishery as the main functions.

(4) Promote people-centered new-type urbanization

Increase urban population agglomeration. Efforts should be made to implement the strategy of "small counties and big cities", actively guide farmers to relocate to other places, and foreign laborers to settle in Sanmen, and improve the population agglomeration in central urban areas. Establish a population migration system for the orderly flow of urban and rural areas, comprehensively relax restrictions on urban settlement, deepen the reform of "three rights to people (households) and rights to people (households)", implement the implementation of agricultural population to settle in cities without retreating, establish a population transfer cost sharing mechanism, and implement fiscal transfer payments to link the urbanization of agricultural transfer population, promoting the free flow of labor between urban and rural areas. Improve incentive policies to attract migrant workers, and coordinate with multiple departments to promote the guarantee of management services for the floating population. Comprehensively promote the full coverage of the permanent population of public services, stabilize the employment environment, and create a good community environment and living atmosphere. Improve the quality of the agricultural migrant population and the migrant labor force and the ability of urban integration.

Strengthen the construction of housing security and supply system. Adhere to the positioning of "housing instead of speculation", improve the real estate market management mechanism, and realize the smooth operation of the real estate market. Deepen the structural reform of the housing supply side, and accelerate the establishment of a housing system with multi-subject supply, multi-channel guarantee, and both rental and purchase. Improve the diversified housing security and supply system focusing on public rental housing, affordable housing, commercial housing, and shantytown renovation.

9. Revitalize prosperous and beautiful rural areas and create a new situation in the work of "three rural areas."

Deeply implement the strategy of rural revitalization, promote high-quality and efficient agriculture, livable and workable countryside, and farmers' prosperity, accelerate the formation of a new type of urban-rural relationship between industry and agriculture, and build a "three-door model" of beautiful countryside in the new era.

(1) Promote the upgrading of rural industries

Promote the development and growth of rural industries. Strengthen food security guarantees, implement modern seed industry development projects, promote the upgrading and expansion of high-standard farmland and grain production functional areas, and promote stable pig production and supply. Implement actions to upgrade and develop the agricultural industry, and expand and strengthen the six leading industries of small seafood, green crab, citrus, melon, tea and broccoli. Vigorously develop the agricultural product processing industry, build primary processing of agricultural products such as warehousing and preservation, graded packaging, pre-cooling and quick-freezing in production areas and fields, and build a number of enterprises with high industrial agglomeration, high scientific and technological content, and strong driving ability for the intensive processing of agricultural and sideline products. Develop rural leisure agriculture, support characteristic industries such as picking experience,

order agriculture and beautiful rural night economy, and continue to promote the integrated development of primary, secondary and tertiary industries. Promote the transformation of agricultural scientific and technological achievements, strengthen cooperation with scientific research institutes in green crabs, citrus and other aspects, and vigorously promote the upgrading of modern breeding technology. Accelerate the construction of a modern agricultural development platform of "three districts and one town", and promote the construction of modern agricultural parks, grain production functional areas, advantageous areas for characteristic agricultural products, and characteristic agricultural towns.

Box 12: Agricultural Product Market Enhancement Project
<p>1. Expand the wholesale channels of agricultural products. Strengthen cooperation with large-scale agricultural products wholesale markets inside and outside the province, and do a good job in trading shellfish, melons and other bulk specialty agricultural products.</p> <p>2. Broaden marketing channels for agricultural products. Set up three agricultural product marketing centers in Shanghai, Hangzhou and other places to carry out agricultural product exhibition and sales.</p> <p>3. Develop channels for group buying of agricultural products. Development of group and enterprise group buying business.</p> <p>4. Develop new retail channels for agricultural products. Actively develop live sales of agricultural products, e-commerce sales, community distribution and other businesses, and deepen cooperation with representative new retail enterprises such as Freshippo.</p>

Launch the **"fresh and sweet three doors" agricultural brand**. Continuously improve the strategic planning of the regional public brand of agricultural products of "Fresh Sweet Sanmen", explore and improve the operation and management mechanism of regional public brands of agricultural products, increase the cultivation of a series of public sub-brands such as "Sanmen Small Seafood", "Sanmen Melon", "Shanwan Orange" and "Danqiu Mountain", launch the geographical indications of "Sanmen Tang Clam, Sanmen Wangchao, and Sanmen Jumping Fish", and deepen the construction of systems such as brand promotion, authorized use, and dynamic management. Applications for geographical indications of agricultural products continued. Hold citrus festivals and melon festivals, actively participate in various agricultural product exhibition and sales activities, continue to explore the establishment of "fresh and sweet" agricultural product marketing centers in Shanghai, Hangzhou and other big cities, and continuously improve the reputation and popularity of agricultural products in our county, and improve market competitiveness and market share.

Promote the digital transformation of agricultural production and operation. Improve the comprehensive mechanization rate of agriculture-leading industries, build a number of digital orchards and digital fish ponds, promote the integrated application of intelligent perception, intelligent analysis, intelligent control technology and equipment in large-scale planting, and accelerate the construction of decision-making systems such as environmental control, precise application of water and fertilizer, precision planting and breeding, intelligent operation of agricultural machinery, and intelligent analysis. Build a comprehensive county-level rural e-commerce public service system, deepen exchanges and cooperation with online agricultural products e-commerce platforms, and establish an operation model of "live broadcast + adoption + traceability + small video". Explore the establishment of pastoral stations,

create online and offline agricultural product sales display windows and rural logistics supply chain systems. Explore the use of blockchain technology to establish a traceability system for agricultural products.

(2) Promote the construction of beautiful countryside

Improve the living environment in rural areas. Promote the standardization of rural infrastructure allocation, the standardization of supporting public services, the standardization of project construction quality, and the standardization of long-term management and protection mechanisms. Continue to promote the construction of the "100 villages and 1000 courtyards" sea garden, deeply implement the "courtyard revolution", and beautify the rural living environment with the courtyard as the smallest grid. Further promote the "toilet revolution", actively promote the full coverage of ecological toilet renovation administrative villages, and establish a daily operation and maintenance management mechanism for toilets and public toilets. Comprehensively promote the "garbage revolution", promote the reduction, recycling, and harmless treatment of rural household waste, and build provincial and municipal rural household waste classification and treatment demonstration villages. We will further promote the "sewage revolution", comprehensively promote the upgrading and transformation of rural sewage treatment, and strengthen the operation and maintenance management services of rural domestic sewage pipe networks and terminals.

Accelerate the creation of an upgraded version of "10 million projects". Carry out hierarchical classification of scenic transformation villages, and improve rural infrastructure in accordance with the requirements of "one village, one characteristic". Standardize the construction of rural houses, implement the system of approval and construction according to drawings for peasant house construction, build a number of characteristic houses with local flavor, mountain and sea characteristics, and Jiangnan charm, and actively create rural revitalization boutique villages and A-level scenic villages. Promote the group action of beautiful rural areas in the new era, organically connect the construction of beautiful cities, beautiful towns and beautiful villages, and build a new pattern of "one household, one scene, one village and one picture, one town and one place, one city and one scenery". Accelerate the construction of digital villages and build a new space for future villages that are livable, happy, traditional, orderly and harmonious.

(3) Promote the cultivation of new-type farmers

Improve the cultivation policy of "new farmers" who return to their hometowns to start businesses and find employment. Thoroughly implement the "two advances, two rounds" action plan, encourage and guide young people and village sages to return to their hometowns to start businesses and find employment. Encourage scientific and technological personnel and scientific and technological management cadres to go to the countryside to develop and strengthen rural professional personnel by raising salaries and benefits, tilting the evaluation of professional titles, and allowing part-time employment in farmers' cooperatives and agricultural enterprises to receive remuneration. Explore the establishment of a "rural revitalization partner" mechanism, recruit "rural revitalization partners" for entrepreneurs, entrepreneurs, financial investors, experts and scholars, village sages, etc., and improve the "one heart home" position

system at the county, township and village levels. Build a "farmer's home" rural entrepreneurship service cooperative, strengthen project docking for returning agricultural makers, and improve the function of the business incubation platform.

Implement the local high-quality farmer cultivation project. Deeply implement the "tens of millions of farmers" quality improvement project, and continuously improve the production and management level of business entities. Give full play to the advantages of platforms such as the Federation of Agricultural Cooperation and Cooperation, focus on expanding production, supply and marketing, finance and other services, and improve the professional skills of agricultural economic entities. Establish a high-quality rural revitalization college, build a training base for "three rural areas" talents, a training center for digital village construction, and a modern agricultural technology promotion center. Focus on the training needs of agricultural subjects, set up training content such as farm management philosophy, production and operation mode, organization and management mode, agricultural product processing and marketing, etc., and adopt multiple forms such as "learning point teaching + base practice" and "field training + production guidance" to quickly improve practical ability .

(4) Promote the reform of urban-rural integration

Promote urban-rural integration through the free flow of factors. Deepen the reform of the rural collective property rights system, explore and improve the method of "three rights" separation, build a rural collective property rights system with clear ownership, complete power, smooth circulation, and strict protection, and steadily and prudently promote the reform of rural homesteads and the revitalization and utilization of idle agricultural houses. Establish an inclusive financial service system for urban and rural areas, strengthen financial services for agricultural supply-side structural reform, support agriculture-related financial institutions to increase credit for the "three rural areas", develop agricultural insurance, and promote the free flow of urban and rural capital. Establish a mechanism for the transformation of scientific and technological achievements into rural areas, support scientific research personnel to work part-time in rural areas and leave their posts to start businesses, and support them to realize the transformation of scientific and technological achievements through technological shareholding, part-time and part-time salary.

Improve the quality of urban-rural integration through equalization of public services. Promote the extension of urban infrastructure to rural areas, urban public services to rural areas, and urban modern civilization to radiate to rural areas. Accelerate the improvement of urban and rural transportation networks, promote the connection of village roads and rural roads to county and regional transportation systems, and make it easier for farmers to enter cities. Improve rural infrastructure construction standards such as water, electricity, roads, gas, communications, radio and television, and logistics, and promote the transmission of urban public services such as public medical care, education, culture, and social security to rural areas.

X. Build modern infrastructure and enhance new advantages in location competition

Guided by overall optimization and synergy, we will comprehensively promote the construction of four major infrastructures: comprehensive transportation, energy security, water conservancy protection, and disaster

prevention and mitigation, and strive to build an infrastructure support network with complete facilities, efficient services, intelligent green, safe and reliable.

(1) Build a comprehensive transportation system

Actively integrate into the transportation network of the metropolitan area. Build a multi-level railway network of "two vertical and four links", accelerate the construction of the three-gate section of the coastal high-speed railway and the three-gate liaison line of the Jintai intercity railway, plan to promote the construction of the Jianjiao branch line of the Yongtai-Wenzhou railway, and strengthen the cooperation with the Ningbo metropolitan area, the Wenzhou metropolitan area, The Jinyi metropolitan area is closely connected. Build a "two vertical and one horizontal" H-shaped expressway network, start and complete the eastern extension of the Shangsang Expressway, and make up for the shortcomings of the east-west road network. Cooperate with the promotion of the widening and reconstruction project of the Yongtaiwan Expressway (Sanmen Section) to improve the efficiency of the Yongtaiwan Expressway. Accelerate the preliminary work of the construction of the general airport in Sanmen County. By 2025, it will basically form a 10-minute high-speed and 30-minute access to major townships County City, 1 hour to the "131" traffic circle of Wenzhou metropolitan area of Hangzhou.

Figure 3 Comprehensive traffic layout of Sanmen County

Optimize the intra-regional transportation network. Build the overall road network structure of "seven verticals, seven horizontals, one port and one channel", comprehensively improve the speed of passage and service level, and strive to achieve mid-2025 The driving speed in Xincheng District reaches more than 28 km/h during peak hours. Improve the coverage of township access, and strengthen the connection and transformation of the comprehensive road network. Promote the planning of the provincial highway Yinzhou to Yuhuan Highway Sanmen Yuanli to Linhai Longao section, 34 provincial highway Sanmen Maaoling to Linhai The reconstruction project of the Huixi section made up for the shortcomings of the central longitudinal road network. Accelerate the implementation of the Shaliu-Binhai New City highway. Accelerate the preliminary study of the Sanmen section of the 316 provincial highway, and plan projects such as the Sanmen Pavilion to Dongcheng Highway and the Sanmen Pavilion to Gaofeng Highway. During the 280th Five-Year Plan period, the maintenance and improvement of rural road surface was improved by 25 kilometers, the two-lane rate of rural roads in organized villages was increased by 275%, 200 village-level logistics points were optimized and upgraded, and 3 beautiful rural roads were built km, build > traffic scenic roads, and complete the construction of smart rural highway management and maintenance platform.

Figure 4 Layout of the internal highway network of Sanmen County

Strengthen the port and shipping transportation system. Promote the completion of the planning and preparation of the Jiandiao port area, accelerate the construction of the overall layout of "two hearts, two belts, and multiple points", and greatly improve the navigation capacity of the terminal. Improve the transportation system of port dredging, promote the reconstruction and upgrading of roads in the port area

of Liuaao operation area in Jianyu Port Area, and start the study of the road system of port dredging in the operation area of Qishitang and Xiashatang operation area. Promote the construction of modern professional terminals, build Taizhou Tongda Port Terminal, Taizhou Sanmen County Modern Port Logistics Base and New Material Industrial Park Terminal, etc., to build a bulk cargo flow distribution base. Coordinate and promote the construction of a number of deep-water waterways and supporting anchorages, implement the dredging project of the Maotou Waterway branch channel, and continue to build the Yangshi Tu test trench project. Plan to implement the construction of a water general airport on Huaguman Island.

Box 13: The overall layout of "two hearts, two belts, and multiple points" in Jiandiao Port Area
<p>Two hearts: build Liuaao operation area and Niushan operation area + Yangshi Tu operation area two core areas of port development. Liuaao Operation Area comprehensively develops port logistics and port industry, and builds it into a core operation area for bulk cargo distribution in Jiandiao Port Area, mainly serving the rear port industry, taking into account the transportation of materials for urban production and life, and radiating to drive Taizhou area and Jinhua area. The Niushan operation area has become an important power energy pole in the Beibu Bay Area; Yangshi Tu Operation Area focuses on the development of port industry and port logistics, and will become an important petrochemical energy pole in Beibu Bay Area in the long term.</p> <p>Two belts: build two industrial agglomeration development belts along the Liuaao Industrial Agglomeration Development Belt and the Jianyue River Lingang Industrial Agglomeration Development Belt. Comprehensive development of bulk cargo flow trading, equipment manufacturing, leisure tourism, agricultural and fishery products exhibition, commerce and trade along the Liuaao industry; Jianyue River Lingang Industrial Gathering and Development Zone comprehensively develops liquid chemical industry, Lingang logistics, shipbuilding equipment manufacturing, auto parts manufacturing, urban production and living material transportation, fishery product processing, exhibition trade and other industries.</p> <p>Multi-point: form multiple port agglomeration development points such as Qishitang Operation Area, Xiashatang Operation Area, and Longshan Operation Area. The seven Shitang operation area and the lower Shatang operation area mainly serve the rear port industry, taking into account the transportation of materials for urban production and life; Longshan operation area mainly develops cargo transit transportation, taking into account the development of port industry.</p>

Promote the construction of comprehensive hubs. Strengthen the construction of large-scale freight hub nodes and build a multimodal transport system with efficient and smooth flow of public iron and water. Build a comprehensive passenger transport hub network with zero distance transfer and seamless connection, and start the construction of Sanmen North Railway Station Passenger Transport Center Station and Sanmen Railway Station Passenger Transport Center Station. Lay out and build an urban and rural passenger transport service network of

"one master, two pairs and ten points", and accelerate the promotion of Jianjiao Bus Station, Tingbean Bus Station, Shaliu Bus Station, Zhuao Bus Station, Puba Port Bus Station and Shepan Bus Station and other township-level passenger station construction.

Figure 5 Layout of comprehensive hub in Sanmen County

(2) Improve the energy guarantee system

Strengthen power security. Implement the 500 kV coastal power transmission and transformation project, accelerate the construction of the 110 kV Chengbei power transmission and transformation project, and plan ahead of time 110 kV continuous heart change, zhengyu change, big cycle change, Lingfeng change, Yongfeng change power distribution point and preliminary work. Accelerate the construction of "rural revitalization, power first" demonstration areas, and carry out the construction of target grid (line connection and transfer), old power equipment transformation, and supporting power infrastructure (corridors) in county and urban areas. Promote the expansion and upgrading of the nuclear power industry, implement the second and third phases of Sanmen nuclear power, adopt advanced technology routes, and build four new million-kilowatt-class units.

Strengthen natural gas supplies. Promote the Sanmen-Shengzhou (Taizhou section) natural gas high-pressure transmission and distribution network project, and implement 3 LNG emergency stations, 6 medium and medium pressure regulation stations, and 4 Construction of LNG bottle group gasification station and improvement of supporting facilities system. Actively promote the full coverage of pipeline gas in urban areas.

Promote the application of new energy. Vigorously promote the development of renewable energy, further promote the pilot project of distributed photovoltaic power generation, and support qualified enterprises to carry out wind power generation and grid-connected operation. Build a batch of new energy supply facilities and promote the construction of pumped storage power stations. Actively promote the construction of new energy in rural areas, and encourage the comprehensive utilization of biogas and straw.

(3) Consolidate the water conservancy protection system

Strengthen flood prevention and drainage facilities. Build the Haitang Anlan network, in accordance with the principle of paying equal attention to flood prevention and waterlogging, combining flood prevention and control with flood avoidance, focusing on promoting the Haitang reinforcement project and planning the Haiyou Port Gate Hub Project Continue to carry out comprehensive management of Haiyou River Basin, Zhuyou River Basin, Qingxi River Basin, Jianjiao Port Basin, Puba Port Watershed and Donggang River Basin, and comprehensively complete the reinforcement of existing dangerous reservoirs.

Build a water security system. Comprehensively consider the water demand of the county in the near, medium and long term, implement the water source network joint commissioning project, build a new Shaliu Water Plant, and expand the Xunpu Water Plant. Accelerate the construction of major projects such as the comprehensive development of resources in the Dongping Reservoir and the reservoir area. Optimize the allocation of water resources, implement the strictest water resources management system, comprehensively promote the construction of a water-saving society, strictly review water resources intake permits and project recognition, explore the establishment of a water-saving reward system, and improve regional water security capabilities. Accelerate the transformation and upgrading of urban and rural water supply pipe networks, and realize the "network joint supply and homogeneity of the same network" of urban and rural water supply.

Promote the construction of smart water conservancy. Use cutting-edge technology to promote the innovation of means, models and concepts of water management and management, accelerate the integration of core business information perception and co-construction, sharing and sharing of core business information such as river and lake reservoir protection, flood disaster prevention, and water affairs supervision, and implement water conservancy informatization, hydrological monitoring, and flood and drought disaster prevention and other related project construction. Establish real-time perception of information in all fields to realize real-time flood forecasting, real-time project scheduling, real-time project scheduling, real-time water supply management and control, real-time ecological monitoring, and timely risk warning.

(4) Improve disaster prevention and mitigation systems

Establish a comprehensive disaster prevention system at the county level. Carry out a comprehensive risk survey of natural disasters in the county, and implement the positioning and construction of monitoring stations such as surface water automatic stations in townships and key areas, automatic air stations in industrial parks, radiation stations in nuclear power plants, and automatic stations for noise monitoring. Coordinate the monitoring resources and basic data of meteorological, water conservancy, natural resources and other departments, build a smart emergency disaster prevention and mitigation platform, build a meteorological disaster early warning center, improve the marine (bay area) safety monitoring and early warning emergency command system, and improve the disaster accident monitoring and early warning, handling, rescue, recovery and reconstruction mechanism covering the whole area. Promote the construction of evacuation and rescue spaces such as county rescue channels, nuclear emergency evacuation channels, and evacuation (disaster) sites.

Improve the reserve system of disaster relief materials. Improve the disaster relief material reserve management system, operation mechanism and reserve mode, and steadily advance the construction of our county's emergency material reserve support base. Steadily advance the construction of a multi-level disaster relief material reserve bank and an emergency commodity database, strengthen the connection between the disaster relief material reserve system and the emergency logistics system, and improve the level of information management of material reserve transfer and transportation.

11. Continue to enhance cultural soft power and show the new charm of mountain and sea civilization

Adhere to the guidance of socialist core values, improve the degree of social civilization, carry forward traditional culture, enhance cultural services, prosper cultural industries, promote the unity of meeting the people's cultural needs and enhancing the people's spiritual strength, and comprehensively enhance cultural soft power.

(1) Forging the soul by reshaping spiritual civilization

Strengthen the leading role of core values. Unswervingly adhere to the socialist core value system, vigorously publicize the vivid practice of Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era in the three gates, firmly grasp the correct guidance of public opinion, and guard the main position of ideological construction. Vigorously implement the party's innovation theory heart-to-heart project, and promote the party's innovation theory to "fly into the homes of ordinary people". Build the New Era Civilization Practice Center into a grassroots ideological position for disseminating the party's innovative theories, cultivating new people of the times, and carrying forward the new wind of the times. Launch the "Red List Ode to Morality" spiritual civilization construction brand and create a civilized moral highland.

Vigorously carry forward the spirit of the uprising beside the pavilion. Relying on the red resources next to the pavilion and taking the "Ten Ones" project as the starting point, we will make good use of the red resources such as the ancient villages and ancient houses in the old revolutionary area next to the pavilion to plan to repair the old site of the Lingtong Conference of the Barn and Qinxu Red sites such as the former site of the "Linsan County Party Committee Station" and the former site of the birthplace of the uprising next to the Nanxi Pavilion actively promote the spirit of the uprising next to the pavilion by combining online and offline methods such as graphic displays, drama performances, micro-movie broadcasting, and red party classes, promote the construction of the Sanmen Red Banner No. 1 Floating Cultural Education and Training Center, and launch the "golden business card" of the red cultural education base next to the pavilion.

Inherit and develop the spirit of marine culture. Relying on the Anlan Project "Lianxintang" monument and Sanmen Reclamation Memorial Hall, etc., inherit the spirit of "self-reliance, hard work, selfless dedication, and perseverance". With the marine culture of "Haicheng gunsmoke and Qijiang traceability" as the carrier, vigorously carry forward Qi Jiguang's anti-Yan spirit of heroically resisting foreign aggression and not being afraid of sacrifice. With the marine culture of "Ge Xuan asking, Cui Pu drifting into the sea" as the carrier, focus on promoting the protection and construction of Cui Pu drifting landing sites, and inherit Ge Xuan's indomitable spirit and Cui Pu's spirit of not being shocked. With the marine culture of "opening the sea and accepting a hundred rivers" as the carrier, we will continue to hold special publicity activities such as World Oceans Day and National Ocean Publicity Day, China Small Seafood Music Festival, China Small Seafood Expo, and Marine Photography Exhibition.

(2) To activate the historical context of preaching

Inherit and develop the three intangible cultural heritages. Fully excavate and systematically sort out historical and cultural heritage, and actively carry out the application of intangible cultural heritage. Hold multi-level intangible cultural heritage activities, increase the training of inheritors, and build intangible cultural heritage exhibition halls, intangible cultural heritage craft studios, intangible cultural heritage inheritance bases, etc. Make every effort to protect and inherit intangible cultural heritage such as the Three Gates of Winter Festival, the Stone Window Technique, the Pearl Drum, the Huaqiao Dragon Lantern, the Gaofeng Ancient Pavilion, the Six Beasts of the Sea, the Small Sea, etc., and the Sanmen Marine Fishing Customs. Regularly undertake the national "24 solar terms" themed live performance, Yangjia Banlong Street and other intangible cultural heritage projects in the province exhibition.

Deepen the protection of traditional villages. Thoroughly implement the project of protecting famous historical and cultural villages, strengthen the overall planning, protection and development of ancient villages, focus on protecting the national-level traditional villages of Dongping Village and Yanxia Village, as well as provincial traditional villages such as Yangjia Village, Baojia Village, Gaofeng Village and Zhuao Village, and encourage eligible villages to actively apply for inclusion in the national protection list. Implement the cultivation plan for the activation and utilization of cultural heritage buildings, and promote the "Save Old Houses" action. Repair historical and cultural relics, build Ning Cultural Park, and create 5,000-year-old historical and cultural sites displaying China. Actively strive to create a provincial "millennium ancient city" revitalization pilot.

(3) Benefit the people with sound cultural and sports services

Improve the layout of public cultural and sports facilities. Improve and improve public cultural facilities, improve the service level of county archives, libraries, museums, cultural centers, rural cultural auditoriums and other cultural fronts, build national digital archives, and improve the quality of public cultural services. Deepen the implementation of the "integrated media empowerment" project, with the "Three Doors in the Palm" APP as the guide, and integrate information, government affairs and cultural service platforms. Relying on the civilized practice cloud platform and the auditorium cloud APP to promote the construction of online propaganda platforms, promote the normalization and institutionalization of ideal and belief education. Increase the supply of fitness venues and facilities, implement the construction of sports parks, fitness centers, fitness "green lanes", steadily promote the upgrading project of Xiaokang sports villages and the project of sports facilities into parks, strictly implement the standards for the construction of sports facilities in new residential areas and communities, and achieve full coverage of the community's 10-minute fitness circle.

Innovate public cultural service models. Innovate and implement cultural actions to benefit the people, establish a feedback mechanism for cultural needs, and explore an interactive and order-based service model that is bottom-up and supply on demand. Promote the integrated construction of urban and rural public cultural service systems, and establish and complete evaluation mechanisms for the standardization and equalization of public cultural services. Improve mechanisms for government procurement of public cultural services, and encourage social forces to participate in public cultural services.

Enriching cultural activities for the masses. Encourage public welfare cultural activities and art popularization education, carry out activities of folk art in schools, communities, and villages, and develop online literature and art. Regularly carry out traditional brand projects and daily cultural activities such as the People's Cultural Festival, Sanmen Festival Winter Cultural Festival, Huaqiao Dragon Lantern Festival, Taotou She Fishing Village Cultural Festival, Shepan Tourism and Culture Week, Weekend Theater, People's Grand Stage, and Cultural Team Performances. Actively hold food markets, cultural markets, etc., and promote the transformation of festival projects with mature conditions into comprehensive supporting formats. Enrich the cultural life of migrant workers, urban youth and other groups, and cultivate nighttime culture.

(4) Shaping the rhyme with the prosperity of the cultural industry

Actively cultivate and develop emerging cultural formats. Deeply excavate local characteristic cultural resources such as folk customs, coastal defense, religion, and ancient villages, promote the expansion of farming culture to marine culture, actively extend the industrial chain, create cultural core IP, introduce and cultivate digital entertainment enterprises, and accelerate the development of cultural and creative projects such as online literature, online film and television, and experiential tourism. Focusing on the themes of red culture and fresh sweet culture, integrate cultural elements into the manufacturing industry and enhance the added value of cultural and creative products.

Promote the in-depth integration of cultural tourism. Relying on the construction of the red tourism education base and the coastal tourism open project, with the charm of the old city, coastal attractions, historical buildings, literary classics and historical sites as the main line, it connects the classics of classic scenic spots and creates a "fist" product integrating "red, blue, green and ancient" cultural and tourism integration. Implement the "Poetry and Painting Zhejiang, Hundred Counties Thousand Bowls, Fresh Sweet Three Gates" project, promote the construction of small seafood street and other projects, cultivate 100

counties and thousands of bowls flagship stores, experience stores, and food blocks, make every effort to create the "Poetry and Painting Zhejiang, Hundred Counties Thousand Bowls, Fresh Sweet Three Doors" food culture IP, shout the slogan of "Three Doors Tourism Starts from Eating", and promote the high-quality development of the Sanmen cultural tourism industry. Deeply explore local characteristic cultural brands such as Tanyou, Danqiu, Cui Pu Drifting Sea and Shepan Island Reclamation, vigorously promote cultural industrialization, encourage and guide private capital investment and development, and promote the development of cultural and tourism integration industries.

Strengthen the construction of cultural industry platforms. Vigorously implement the development strategy of cultural parks, revitalize the use of existing space such as the western district of the county and Haiyou Old Street, encourage private enterprises to participate in the construction of the park, accelerate the "cage for bird" through functional circulation and creative transformation, cultivate a number of cultural industry incubation platforms with perfect functions, and build a new urban cultural space. Plan to build cultural carriers such as Jianjiao Small Seafood Food Cultural Experience Block, "Red + Intangible Cultural Heritage + Research" Cultural Industry Block next to the Pavilion, Zhuao Buddhist Cultural Park, Hengdu Sketching Base, Panjia Town Night Economic Block and other cultural carriers to form a fulcrum with cultural industry characteristics .

12. Strengthen the ecological protection of land and sea, and expand new channels for green transformation

Seize the opportunity of building a national-level ecological civilization demonstration county with high standards, further promote the construction of a large garden in the whole area, a new ecological construction of sea and land, establish an ecological environment governance system that integrates aboveground, underground, land and sea, explore a new model of green circular development, and create an upgraded version of "beautiful three doors".

(1) Create intensive and efficient production space

Accelerate the recycling transformation of parks. Arrange special funds to promote the pilot construction of circular demonstration, support the construction of recycling transformation projects in parks, promote industrial green transformation, reduce and eliminate backward production capacity, and form a recycling-oriented industrial chain. Promote the transformation of emission reduction and carbon reduction technologies in traditional industries such as rubber and plastic products, complete vehicles and parts (auto and motorcycle parts), and equipment manufacturing in the park, further reduce energy consumption per unit of product, and improve the level of resource utilization of industrial waste.

Efficient and economical use of resources. Promote the construction of a Water-saving society, implement a strict water resources management system, strengthen the dual control of total water consumption and intensity, and promote agricultural water saving and efficiency, industrial water saving and emission reduction, and urban water saving and loss reduction. Implement the strictest system of saving and intensive land use, revitalize the stock of land, reduce inefficient land, promote the construction of standard land, and improve the intensity of land use.

(2) Build a beautiful ecological space on land and sea

Pave the background color of the large coastal garden. With the eastern coastal plain as the core, the important lakes and reservoirs as the nodes, the natural ridges and rivers in the central and western regions as the corridors, and the ecological shore section and sea area as the support, a global ecological

conservation system is constructed, and the ecological pattern of "six veins connecting the sea, five ports connecting cities, and mountains and seas integrating each other" is formed. Relying on the six major mountain ranges of Wuyan Mountain Range, Shuangjian Mountain Range, Dalong Mountain Range, Xianshui Mountain Range, Stalagmite Mountain Range and Changshan Mountain Range to form the "Green Belt to the Sea", relying on the natural water body of "Five Ports and Eight Streams" to form the "Blue Belt with City Link", blue and green are woven to build an ecological corridor connecting mountains and seas.

Figure 6 Ecological pattern of Sanmen County

Maintain high-quality ecological coastal zones. Strengthen the control system of land reclamation and shoreline development, and formulate differentiated control measures by zoning and classification to ensure that the total length of the natural coastline of islands classified as ecological redline management will only increase. Strengthen the ecological management and control of shorelines, and pilot the construction of coastal ecological corridors. Improve the system of natural shoreline and ecological shoreline balance. Strengthen the ecological restoration of coastal environments such as bays, islands, headlands, wetlands, and shore beaches, and rebuild the ecological landscape of coastal zones.

Continue to carry out special governance. Deepen the "five water co-governance", continue to promote the "clear water defense war" action, and do a good job in the construction of national control water quality improvement projects. Promote the construction of "zero direct sewage discharge", comprehensively improve and transform urban sewage treatment projects and their supporting pipe network facilities, establish a long-term operation and maintenance mechanism for sewage pipe networks, and strengthen the rectification and standardization of sewage outlets into rivers. Strengthen the protection of drinking water sources such as Dongping Reservoir and Tsuishi Reservoir, and promote the rectification of drinking water sources of "2,5 tons of people". The construction of a demonstration area for improving quality and fresh air will carry out the treatment of industrial source VOCs pollution, mobile source pollution, road dust, kitchen fumes and straw burning, realize the dual control and reduction of PM_{2.5} and ozone, and strengthen carbon emission control. Carry out detailed investigation of soil environmental quality, establish a dynamic management mechanism for suspected contaminated plots, complete the positioning of soil monitoring points in the county, and improve the soil environmental quality monitoring network.

Deepen ecological restoration projects. Carry out ecological restoration of river basins and rivers focusing on the comprehensive treatment of the "Five Ports and Eight Streams" basin, and enhance water conservation and soil conservation in the western hills with projects such as comprehensive treatment of small watersheds as the starting point. Continue to promote land greening projects, and basically establish a forest ecosystem with reasonable layout, covering urban and rural areas, and powerful functions. Accelerate the construction of ecological restoration projects such as Luoao Reservoir, Shijiaoao Reservoir, Shimen Reservoir and other reservoir areas, such as ecological wetlands for streams entering reservoirs and buffer zones around the reservoir. Strictly supervise the use of wetlands, promote the restoration of degraded wetlands, and enhance the ecological functions of wetlands. Implement a special protection system for permanent basic farmland, and strictly control the occupation of permanent basic farmland by non-agricultural construction.

Actively protect biodiversity. Focus on the protection of animal and plant resources, carry out in situ conservation of biodiversity with the theme of nature reserves, and form a county biodiversity conservation pattern of "one core, two corridors, three belts and four points" at the county level. Improve the background survey of biodiversity in our county, and establish a biodiversity monitoring system and management information system. Strengthen early warning of invasive alien species and safety management of genetically modified organisms, and implement targeted ecological prevention and control measures. Strictly implement the fishing suspension (ban) system, reasonably delineate prohibited fishing areas and protected areas, and build artificial reefs.

Figure 7 Biodiversity conservation pattern of Sanmen County

(3) Create a living space suitable for living and working

Accelerate the creation of a "waste-free city". Establish an information supervision platform for the supervision and management of the whole process of hazardous waste, and improve the system of collection, temporary storage, transfer, disposal and utilization of hazardous waste. Strengthen the linkage supervision of medical waste to ensure the standardized collection and safe disposal of medical waste. Build a scientific and intelligent garbage classification collection, transportation and disposal system to achieve "zero landfill" of domestic waste. Improve the resource utilization of agricultural waste and construction waste. Establish a garbage collection and transportation mechanism supervised by the government, paid by enterprises, and operated by third parties, and support the construction and rational layout of urban and rural garbage treatment and disposal infrastructure.

Promote the formation of green consumption consciousness. Strengthen the awareness of green consumption, accelerate the transformation of green lifestyle, strictly limit plastics, and refuse food waste. Vigorously promote the application of water-saving appliances, energy-saving home appliances, and green furniture. Encourage green travel, improve the urban public transportation service system, accelerate the promotion of new energy vehicles and supporting infrastructure construction, and guide the public to practice a green and low-carbon lifestyle.

Actively cultivate ecological culture. Actively carry out mass special education activities on ecological science, strengthen the publicity and popularization of legal knowledge and scientific knowledge of ecological civilization, and guide the whole society to establish awareness of ecological civilization. Accelerate the construction of three demonstration bases for ecological civilization publicity and education, and strengthen the practice of ecological civilization construction for the whole people.

(4) Improve the overall management system of land and sea

Innovate the construction of ecological civilization system. Strengthen territorial spatial planning and "three lines and one single" ecological environment zoning control, and strictly abide by the ecological bottom line of land and sea resources and environment. Promote the confirmation and registration of rights to shoreline resources and marine area resources, refine the value assessment of marine ecological resources, explore the marine version of "Two Mountains Bank" and "Two Mountains Fund", and establish a big data platform for marine ecological assets. Improve the ecological compensation system for marine resources, improve compensation for marine environmental damage, and explore ecological compensation for river basins-sea areas.

Build a modern environmental governance system. Create an upgraded version of the river chief system, lake chief system, forest chief system, and bay chief system. Improve the environmental

monitoring network with three-dimensional perception and coordination between the top and bottom, and form a "one map" of ecological environment investigation, monitoring and assessment. Organize and carry out investigation and assessment of environmental risk sources, comprehensively grasp the situation of enterprises with hidden environmental risks, and establish a county environmental risk source database. Establish and improve the safeguard mechanism for the collection and storage of urban radioactive waste, and strengthen nuclear and radiation safety management. Tighten the responsibility system for ecological environmental protection, and improve the accountability mechanism.

Box 14: Key environmental protection construction projects during the
◇th Five-Year Plan period

1. Sanmen County garbage collection and transfer system improvement project

Comprehensive sanitation supporting projects, garbage transfer station construction projects, township street household garbage collection station quality improvement and reconstruction projects, garbage classification and resource station construction projects. (Responsible unit: County Administrative Law Enforcement Bureau)

2. Comprehensive land consolidation project in Sanmen County

The county has completed the transformation of 2150,5000 mu of dry land into paddy fields, 4100,◇ mu of medium and low-yield fields, ◇,◇ mu of garden (forest) land to arable land, and reclamation of construction land. (Responsible unit: County Department of Natural Resources and Planning).

3. Sanmen green energy environmental protection (waste incineration power generation) project

The total scale of the project is 1000t/d, and the first phase of construction of 1×500t/d mechanical grate furnace incineration line, collaborative treatment of 50t/d of food waste, mixed with general industrial solid waste 100t/d. (Responsible unit: County Administrative Law Enforcement Bureau).

13. Build a sweet and beautiful home and create a new life of people's livelihood and happiness

Adhere to the people-centered development concept, focus on enriching the people and improving well-being, provide better education, more assured medical care, fuller employment and more reliable social security, continuously enhance the people's sense of gain, belonging, and happiness, and hand over high-score reports for people's livelihood.

(1) Continue to expand the results of educational revitalization

High-quality development of basic education. Improve the layout of the preschool education school network, concentrate on reforming, expanding, and building a number of township (street) public center kindergartens, actively guide and encourage village collective funds and private funds to participate in the construction of inclusive kindergartens, and accelerate the creation of national preschool education universal and inclusive counties. Promote the construction of a compulsory education community, implement the "rise" project of junior high schools, accelerate the renovation of experimental schools in Sanmen County, the new construction of primary schools in the Economic Development Zone, Guanlan Middle School, Hairun Middle School, and the overall relocation of Zhuao Middle School, and strive to achieve 1 00 provincial compulsory education standardized schools %, strive to create a high-quality and balanced county for national

compulsory education. Accelerate the development of high-quality and characteristic ordinary high schools, and deepen the reform of "stratified shifting" teaching.

Promote the integration of industry and education at a high level. Enhance the adaptability of vocational and technical education, deepen vocational integration, integration of industry and education, school-enterprise cooperation, strengthen the integration of school engineering and learning, school-enterprise cooperation, deeply explore the implementation of modern apprenticeship system, and realize the organic combination of vocational talent training schools and enterprises, enrollment and recruitment, graduation certificates and skill certificates. Strengthen the docking of the three technician colleges with platforms such as the Economic Development Zone, and explore "platform-to-platform" schools + Enterprise" development model, strive to create a provincial industry-education integration demonstration base. Comprehensively optimize the talent training system and mechanism of the three technician colleges, and create the "three brands" of vocational education. Plan to build a national defense military research base.

Improve the level of teachers in an all-round way. Comprehensively implement the party's education policy, persist in cultivating people with morality, and strengthen the building of teachers' morality and teaching style. Strengthen cooperation with famous schools in Hangzhou and Shanghai, strengthen the studio of famous teachers, deepen the project of famous teachers and famous principals, establish and improve the system and mechanism of on-the-job training and pair learning, focus on strengthening the training of key teachers in weak areas such as preschool education, rural primary and secondary schools, and special education schools, and effectively improve the professional quality and ability level of key principals and teachers. Formulate and implement supporting policies such as housing incentives and salaries, and actively introduce and retain famous and special teachers and educational management talents.

(2) Deeply promote the construction of the three gates of health

Comprehensively improve the level of medical and health services. Improve maternal and child health services, strengthen technical guidance functions for women's health care, child health care and family planning, increase the quantity and quality of childcare service institutions, and make up for shortcomings in childcare. Implement and provide detailed family doctor contracting services, and the signing rate of key groups has reached 100%, and explore the establishment of community nursing stations. Strengthen the characteristic services of traditional Chinese medicine, make special and independent county hospitals of traditional Chinese medicine, implement the health project of traditional Chinese medicine to treat pre-existing diseases, improve the diagnosis and treatment service capacity of traditional Chinese medicine for the prevention and treatment of common, frequent and chronic diseases, and strive to achieve full coverage of traditional Chinese medicine halls in grassroots health hospitals. Optimize the allocation of medical and health resources, start the construction of the third phase of the county people's hospital project (women and children inpatient building), the county center for disease control and prevention comprehensive building project, the county maternal and child health care family planning service center comprehensive building, actively strive to build the second county people's hospital in the south of Hong Kong, encourage private capital to set up special specialized hospitals, and achieve a win-win situation between public and private medical institutions. Strengthen the training of health professionals and specialized capabilities, improve the training and incentive mechanism for practitioners, and explore the establishment of flexible introduction mechanisms. Carry out in-depth patriotic health campaigns and popularize health knowledge and skills such as emergency care for all people. Establish

rapid response mechanisms for major public health incidents, and improve emergency management systems for public health prevention and control.

Deepen the reform of the medical and health care system. Promote the construction of county medical communities with high quality. Actively explore the "three-level" linkage medical service structure relying on the high-quality medical resources of the First Hospital of Zhejiang University, with the county people's hospital as the main body and the township health center as the cornerstone, and innovate the characteristics of three doors. The new model of "double sinking and two promotion" has created a "three-door model" for the construction of the city's medical community. Accelerate the establishment of special subsidy funds for the medical community, and improve the two-way referral platform within the medical community. Deepen the reform of performance evaluation, and establish an internal distribution mechanism for more work, more rewards, and excellent performance. Deepen the reform of public hospitals and the reform of "running at most once" in the field of medical and health services, promote the construction of modern hospital management systems, deepen the reform of medical and drug supply guarantee systems, and break down "information islands". Promote the construction of "smart healthcare" and telemedicine services.

Continue to explore the integration of medical and elderly care models. Explore a new model of integrated development of "medical care and health care", and carry out the pilot work of a new type of "health care consortium". Accelerate the improvement of the home-based, community-based, fully developed institution, and organic combination of medical care and health care service system. Revise and implement the layout plan for elderly care service facilities in Sanmen County, focusing on ensuring the dismantling, integration, transformation and upgrading of community embedded elderly care institutions and rural homes for the elderly, promoting the construction and operation of township (street) home-based elderly care service centers, and encouraging public elderly care institutions to set up special areas for persons with mental disorders. Implement a three-year upgrade plan for elderly care institutions, and promote the construction of the county first welfare home, the Hong Kong South Home for the Elderly, and the Pavilionside Health Care Complex. Encourage public health medical institutions to carry out integrated medical and nursing care services, establish and improve business cooperation mechanisms between medical institutions and elderly care institutions, promote the establishment of geriatric departments in county people's hospitals, Haiyou, Tingbean and other township health centers, and increase the number of elderly rehabilitation nursing beds. Establish a monitoring and evaluation system for the integration of medical and nursing care, and establish a data monitoring system for the integration of medical and nursing care.

(3) Create a full and harmonious employment environment

Improve the function of public employment services. Promote the construction of recruitment platform informatization, broaden the adherence to the principles of government guidance, policy promotion and market leadership, and build a dual selection platform for enterprises' employment needs and employment intentions. Continue to deepen the "three services" activities, vigorously implement the "flexible employment" model, and do everything possible to help enterprises solve employment problems. Implement the employment priority policy more vigorously, actively carry out the action of providing full coverage to people with employment difficulties, and make overall plans to promote the work of reducing burdens, stabilizing jobs, and expanding employment in enterprises. Deeply weave a "no arrears" network to create a county model of "no arrears of wages".

Make every effort to promote entrepreneurship and employment. Strengthen entrepreneurial guidance, increase policy support, and actively promote the construction of platforms such as public innovation spaces, business incubation bases, and college student business parks, and constantly improve "Apprenticeship-employment-entrepreneurship" full-cycle support mechanism. Encourage returning to their hometowns to start businesses, popularize the rural cooperative entrepreneurship model, and carry out training for leaders of cooperative entrepreneurship who return to their hometowns and villages, such as improving entrepreneurial capabilities. Organize and hold various entrepreneurial theme activities such as entrepreneurship and innovation competitions to create a strong entrepreneurial atmosphere. Explore new employment models such as shared employees, and support workers to achieve employment through flexible and diverse forms such as temporary, part-time, seasonal, and flexible work.

(4) Provide balanced and reliable social security

Strengthen social protection. Improve a multi-level social security system that covers the whole people, integrates urban and rural areas, is fair, unified and sustainable. Establish mechanisms for determining basic old-age insurance benefits for urban and rural residents and for normal adjustment of basic old-age pensions, and increase financial investment. In-depth implementation of the universal insurance plan to ensure that the registered population should be fully guaranteed. Strengthen the triple guarantee function of basic medical insurance, serious illness insurance and medical assistance, and improve the supplementary medical insurance method. Support and guide commercial insurance institutions to establish exclusive GSP commercial health insurance. Establish long-term mechanisms for preventing and resolving poverty and returning to poverty due to illness, and reasonably control the proportion of out-of-pocket expenses within the scope of policies for social assistance recipients. Steadily advance the reform of DRGs payment for inpatient medical services, deepen the reform of diversified and complex medical insurance payment methods, promote the complementary connection of various medical insurances, and continue to improve the level of protection for major and extraordinarily serious diseases and diversified medical needs.

Deepen the construction of the large-scale rescue system in the new era. Deeply docking with the provincial "1+8+X" rescue system, and continuing to promote the reform of the "help community" model of the large-scale rescue system. Further improve mechanisms for accurate screening, comprehensive assessment, and long-term assistance. Relying on the joint help center and convenience service center, we will further build "one-stop help, a package of assistance, and benefit a family". The rescue community has created a large rescue system in Zhejiang Province "Three Door Samples". Strengthen the organic connection between social assistance policies and various welfare policies and systems, innovate social assistance service models, and promote "hematopoietic" assistance such as employment assistance and microcredit assistance. Consolidate and expand the achievements in poverty alleviation, strengthen the protection of people in difficulty, raise the minimum hardship protection standards, and strengthen the care and protection of women and children, assistance and protection of the rights and interests of the disabled.

14. Consolidate the foundation of security development and achieve a higher level of new governance

Comprehensively implement the overall national security concept, coordinate development and security, adhere to systematic thinking and bottom-line thinking, resolutely safeguard political security and safeguard economic security, strengthen and innovate social governance, improve the "great peace" construction

system, prevent and resolve various risks affecting the modernization process, and create a higher level of security.

(1) Safeguarding political and economic security

Resolutely safeguard political security. Maintain national political security, especially the security of political power and system, in the first place. Strictly guard against and severely crack down on the infiltration, sabotage, subversion and separatist activities of hostile forces. Strengthen the construction and management of ideological positions. Strengthen national security publicity and education, enhance the people's awareness of national security, and consolidate the people's defense line for national security. Improve anti-terrorism leadership systems and mechanisms, and build an intelligent counter-terrorism prevention and control system. Vigorously support the modernization of national defense and the armed forces, strengthen the construction of professional support teams in various mobilization fields, and improve emergency response capabilities. Strengthen national defense education for the whole people, do a good job in double support, preferential care and resettlement, create military-civilian integration innovation demonstration zones, and consolidate military-government and military-civilian unity.

Do a good job in ensuring economic operation. Be prepared to respond to changes in the external and internal environment for a long time and build a strong line of defense against economic security. Strengthen the dynamic monitoring and judgment of important economic indicators, and establish and improve effective mechanisms for maintaining the security of the industrial chain and supply chain. Improve long-term mechanisms for preventing and resolving risks in the financial sector, and strengthen Internet financial supervision. Establish long-term mechanisms for monitoring and early warning of enterprise risks and helping to deal with them, and severely crack down on financial crimes such as illegal fundraising and debt evasion. Resolutely curb new hidden debts, strengthen the control of the sources of debt risks, and continuously deepen government debt management. Improve the prevention and early warning mechanism, and effectively prevent and control the financing risk of private enterprise bonds, the risk of equity pledge of listed companies and the risk of "two chains".

(2) Strengthen the construction of the three gates of safety

Build a "window county" for grassroots governance at the county level. Adhere to and develop the "Fengqiao Experience" in the new era, deeply promote the reform of social governance "running at most one place", and comprehensively build "145 (one center, four platforms, "five no villages") grassroots social governance system. Improve social risk assessment mechanisms for major decision-making, implement "package case resolution" for backlogged petition cases and reasonable and lawful demands of the masses, and truly resolve conflicts at the grassroots level. Build a "big prevention and control" pattern of urban and rural coordination, online and offline integration, combination of human and material defense, technical defense, and prevention and control. Resolutely prevent and crack down on underworld forces, new networks, transnational crimes, pornography, gambling and drugs, food and drug rings, and intellectual property crimes, and create "counties without theft and robbery" and "demonstration counties without drugs". Deepen the management of services for the floating population, and improve the work pattern for the comprehensive management of the floating population. Strengthen service management for special populations such as community corrections personnel, drug addicts, and persons with severe mental disorders.

Improve public safety and security capabilities. Strengthen the awareness of safe production, strictly implement the responsibility system for safe production, deeply promote the three-year action of comprehensive rectification of safe production, comprehensively carry out the construction of enterprise safety risk management and control system, regularly rectify and investigate potential safety hazards, and do a solid job in the reform of safe production. Strengthen supervision and law enforcement of production safety, and effectively curb serious and extraordinarily serious production safety accidents in the fields of fire protection, road traffic, hazardous chemicals, fishing vessels, and agricultural machinery safety. Strengthen the "sea grid" sea prevention and security control, increase the supervision of fishing vessels, and build a solid line of defense for safe maritime operations. Implement the national food security strategy and make every effort to improve the comprehensive production capacity of grain. Improve the "zero tolerance" mechanism for food and drug safety management, strictly control every line of defense from farmland to table, from laboratory to hospital, ensure the "safety on the tip of the tongue" of the people, and establish and improve the food and drug traceability system. Innovate the "precision intelligent patrol" mechanism, accelerate the construction of a "air-ground integration" global prevention and control system, and continuously weave police aviation patrols, video network patrols, and police road patrols to build an intelligent security environment.

Improve disaster prevention, mitigation and emergency rescue capabilities. Promote the reform of the emergency management system, improve the operation mechanism of the emergency committee, build a county emergency command center with high standards, deepen the construction of the version 2.0 emergency command system, enrich emergency management scenarios, integrate more emergency management "one thing" in the fields of fishing vessel supervision and forest fire protection, and build a full-closed-loop management and control mechanism. Coordinate and promote the construction of emergency systems to ensure infrastructure such as emergency transportation, medical care, water supply, power supply, and material reserves in the county, and strengthen the construction of multi-level disaster relief material reserves and emergency commodity databases. Establish a disaster relief work pattern with the fire rescue brigade as the main force, the militia emergency response force as the assault, the professional rescue team as the coordination, and the social force as the auxiliary. Promote the integrated operation of national defense mobilization, civil air defense and emergency management. Strengthen Red Cross first aid training and emergency drills, and improve the public's comprehensive ability to help themselves, each other and respond to various emergencies.

(3) Deepen the establishment of the three gates of rule of law

Develop socialist democracy. Adhere to and improve the people's congress system, and improve the people's congress supervision system over "one government, one committee, and two procuratorates." Promote the construction of grassroots people's congresses, actively promote innovative cases of grassroots people's congresses such as the voting system for people's livelihood and the evaluation of departmental stations, and deepen and consolidate the work and construction achievements of grassroots people's congresses. Adhere to and improve the multi-party cooperation and political consultation system under the leadership of the Communist Party of China, strengthen the construction of special consultation institutions of the CPPCC, build a smart CPPCC management service platform, and build and make good use of the "invite you to consult" platform. Improve the pattern of the grand united front work, and continuously improve the targeted effectiveness of the work of ethnic groups, religions, intellectuals outside the Party, people from new social classes, people in the non-public

economy, Hong Kong, Macao, Taiwan, and overseas Chinese. Deepen the reform of the masses and improve the work system of party building and mass building.

Improve the quality and efficiency of administrative work in accordance with law. Strictly implement procedures for formulating normative documents, deepen the full coverage of township (street) legality reviews, and improve the level of grassroots rule of law construction. Establish a system for pursuing responsibility for decision-making, and resolutely stop and correct decision-making behavior that exceeds legally-prescribed authority and violates legally-prescribed procedures. Strictly standardize fair and civilized law enforcement, and improve the efficiency and standardization of law enforcement. Deepen the reform of comprehensive administrative law enforcement, periodically carrying out standardized inspections and reviews of law enforcement. Fully implement the reform of the administrative reconsideration system, continue to promote the standardization of administrative reconsideration, and deepen and improve mechanisms such as the use of the results of administrative errors, the listing of key units in administrative disputes, and early warning of administrative errors. Comprehensively enhance judicial credibility. Deeply promote the construction of smart courts, smart prosecutions, and smart justice, and increase data integration and collaborative governance of political and legal departments.

Build a brand of popularizing law and governing according to law. In-depth study and publicity of Xi Jinping Thought on the rule of law, and carry out the "Eighth Five-Year Plan" Law popularization and civil code popularization work, enhance the whole society's awareness of the rule of law and citizens' legal literacy, and build a social law popularization work pattern. Strengthen leading cadres to take the lead in respecting the study of the law and abiding by the law, and guide the whole society to do things according to law, find the law when encountered, solve problems and apply the law, and resolve contradictions and rely on the law. Strengthen the construction of rule of law talents and teams, improve the level of digital rule of law development, and build a smart rule of law society. Strengthen juvenile rule of law education, and fully implement the Youth Rule of Law Education Program. Promote the establishment of a public legal service system covering urban and rural residents, improve the legal aid system, and complete the judicial aid system.

(4) Promote the construction of clean and honest three gates

Strictly purify the political ecology. Insist that the party should manage the party and administer the party strictly, further enhance the "four consciousness", strengthen the "four self-confidence", achieve "two safeguards", and constantly temper the political quality of absolute loyalty. Strictly implement the spirit of the eight central regulations, unceasingly rectify formalism and bureaucratism, and earnestly reduce the burden on grassroots units. Improve the supervision system with unified party leadership, comprehensive coverage, authority and efficiency, and deepen the reform of the discipline inspection and supervision system. Correctly use the "four forms" of supervision and discipline, and strengthen the overall planning and connection between supervision within the party and supervision by the people's congress, the Chinese People's Political Consultative Conference, auditing, the masses, and public opinion. Make good use of the carriers of the "four lists", "two archives" and "two reports" of political supervision, carry out political ecological assessment work on a regular basis, dynamically update, accurately profile, and effectively evaluate, consolidate a clean political ecology, and build a demonstration area for grassroots clean and honest construction.

Build a strong cadre team. Strengthen the orientation of "paying attention to practical work, paying attention to actual results, and paying attention to grassroots units" in selecting and employing personnel, select and match strong leading groups at all levels, and do a good job in the combination of "selecting accurately, using work, cultivating strength, cultivating excellence, and managing well", and accelerate the building of a high-quality professional cadre team. Improve the system of quality training, knowledge of people, selection and appointment, strict management and positive incentives, and deepen the "five-line experience" of young cadres. Continuously strengthen the assessment of cadres' political quality and political supervision, focus on improving the digital, accurate, intelligent and scientific level of regular assessment of cadres and normalized research and judgment, and optimize the selection and cultivation of leading cadres in an all-round way. Take the lead in implementing the reporting system for village-level party organizations to perform the main responsibility of comprehensively and strictly administering the party.

15. Improve the planning implementation mechanism and draw up a new blueprint for the next five years

Unswervingly strengthen the party's overall leadership, give play to the strategic guiding role of development planning, strengthen the guarantee of key factors, strengthen the support of major projects, promote multi-subject supervision and participation in the implementation of the plan, and ensure the smooth completion of the planning goals and tasks.

(1) Strengthen the party's role as the core of leadership

Implement the party's requirements for setting the direction, seeking the overall situation, formulating policies, and promoting reform, and earnestly implement the party's leadership in all aspects and processes of the county's economic and social development. Give play to party committees (party groups) at all levels in economic and social development work. The core role of leadership in overseeing the overall situation and coordinating all parties, improving the decision-making mechanism, and improving the working mechanism of the Party Committee to study economic and social development strategies and major principles and policies. Comprehensively implement the party's organizational line in the new era, strengthen the building of leading bodies and cadre ranks, and improve the level and professional ability of leading groups and cadres at all levels in the county to grasp reform, promote development, maintain stability, and be professional. Improve the performance appraisal and evaluation system and reward and punishment mechanism, improve the fault tolerance mechanism, incentive and protection mechanism, and lead the entrepreneurship orientation of officials with the correct employment orientation. Strengthen grassroots party building, give play to the role of grassroots party organizations as fighting bastions and the exemplary role of party members as vanguards, and better lead the masses to promote socialist modernization.

(2) Strengthen the strategic guiding role of planning

Establish and improve a planning system guided by development planning, based on spatial planning, and supported by special planning and regional planning. Strengthen the connection between various types of planning and development planning, and ensure that all types of plans at all levels are consistent in overall requirements, coordinated in spatial allocation, and scientific and orderly in timing arrangement. Improve the policy coordination and work coordination mechanism, and the binding indicators and key tasks determined in this plan should clarify the lead unit and work responsibilities, and arrange the task book, road map and timetable to ensure that it is completed on schedule. All localities and departments should refine the

implementation of the goals and tasks set forth in this plan, and conscientiously prepare and implement territorial spatial plans, special plans, annual plans, major action plans, and implementation plans.

(3) Strengthen safeguards for key elements of plan implementation

Establish and improve the mechanism of "projects follow the plan and elements follow the project", and give priority to ensuring the element resources required for major reforms, major policies, major platforms and major projects proposed in this plan. Strengthen the connection and coordination between the financial budget and the implementation of the plan, and strengthen the role of finance at all levels in guaranteeing the implementation of the plan. Optimize the structure of resource allocation of financial elements, and guide and encourage financial institutions to strengthen support for major industries and weak areas with clear planning. Formulate guarantee plans for land use, sea use, water use, energy, environmental capacity, etc. that match the plan, and actively guarantee the indicators of various resource elements required for the construction of major platforms and major projects determined by the plan in accordance with laws and regulations.

(4) Strengthen support for planning major projects

Implement the action plan for improving the quality and efficiency of major projects, and attract a number of major projects with large scale, high quality and strong driving force to settle down. Adhere to rolling development and dynamic updating, accelerate the construction of major project libraries, and form a virtuous circle of planning, reserve, completion, and supplementation. Improve the pre-working mechanism of major projects, increase the preliminary research and planning of projects, and improve the feasibility of projects. For key projects included in the plan, the approval and approval procedures will be simplified. Strengthen the management of the whole process of project construction, promote lean management of projects, and improve the coordination service level of project construction. Focus on the implementation of science and technology innovation (2 2 items), modern industry (2 8 items), transportation facilities (2 2 items), ecological and environmental protection (1 9 items), public service (4 4) a total of 1 For 35 major projects, the planned investment amount during the "1th Five-Year Plan" period exceeded 000billion yuan.

(5) Strengthen and complete implementation oversight mechanisms

Strengthen supervision, evaluation and assessment mechanisms, strengthen dynamic monitoring of plan implementation, carry out mid-term assessment and final comprehensive evaluation of plan implementation, establish and improve tracking and feedback mechanisms for the implementation of important goals and tasks, and strengthen dynamic management of plan implementation. Improve the categorical evaluation and assessment of planning objectives, key tasks, construction projects, etc., and improve the binding and effective implementation of planning. Consciously accept the supervision and inspection of the people's congress and the Chinese People's Political Consultative Conference, and earnestly implement the plan.

The grand blueprint for the 14th Five-Year Plan and the 2035 period has been drawn, and the magnificent prospects urge people to forge ahead. The whole county should unite more closely around the Party Central Committee with Comrade Xi Jinping as the core, implement the decision-making and deployment of the provincial party committee and government, the municipal party committee and the municipal government and the county party committee and county government, further emancipate the mind, innovate and work hard, strive to build a new three gates of socialist modernization, develop high-quality development and build a leading county for common prosperity, and make unremitting efforts to draw a good picture of the three "important windows" in the new era.

Annex:

Explanation of the terms of the "Outline" of the 14th Five-Year Plan

1. **"Three Li, Three Advances, Three Breakthroughs"**: The development path of Taizhou City in the new era proposed by the Taizhou Municipal Party Committee: "Sanli" refers to the establishment of the private economy as a city, the establishment of a manufacturing capital, and the spirit of reclamation, and the "three advances" refers to urban development towards "secondary urbanization", industrial upgrading to "two industries", and social governance "Integration of two intelligences" moves forward, and "three breakthroughs" are breakthroughs in ideology and concepts, breakthroughs in project breakthroughs, and breakthroughs in opening up and integration.
2. **"Bank-seal joint office"**: that is, on the basis of the reform of the "five certificates in one" registration system, through the implementation of the **"one-window** acceptance and integrated service" working mode, the joint examination and approval of business license, seal engraving and bank "account opening permit" is implemented, and an efficient joint examination work mode of comprehensive acceptance at the front desk, classified approval in the background and delivery at a unified window is established.
3. **"Six beautiful and three gates"**: refers to beautiful county towns, beautiful towns, beautiful countryside, beautiful courtyards, beautiful seashores, and beautiful passages.
4. **"Three Ports and Three Cities"**: In 2005, Sanmen County put forward the strategy of **"Three Ports and Three Cities"**, that is, to develop Puba Port, build a coastal industrial city, develop Jianyu Port, build East China Electric Power City, develop Haiyou Port, and build Binhai New City.
5. **"Industry 4.0"**: The meaning is the fourth industrial revolution in human history, and the use of information technology to promote industrial transformation. Its essence is to shift from economies of scale to economies of scope through data flow automation technology, and build a heterogeneous and customized industry at homogeneous and large-scale costs.
6. **"Industry-university-research funds, talents, political and political introductions"**: 2 The work report of the Zhejiang Provincial Government in 018 proposed that it should be positive The ten linkage of "industry-university-research funds, talents, policies, and clouds" integrates and improves ten factors such as industry, academia, scientific research, achievement transformation, finance, talents, policies, intermediaries, environment, and services to create an innovation and entrepreneurship ecosystem.
