

The functional new material industrial park project of National Rubber and Tire Engineering Technology Research Center started construction

Time: 2022-07-21 Source: Carbon Black Industry Network Comment

Carbon black industry news, on July 20, 7 projects with a total investment of about 77.2 billion yuan were intensively started in Qingdao West Coast New Area, including the National Rubber Center Functional New Materials Industrial Park project.

It is understood that the National Rubber Center Functional New Material Industrial Park project is a major advanced manufacturing project in Shandong Province. The project is invested by Sailun Group and Qingdao Junxiang New Material Co., Ltd., a scientific research and demonstration base of the National Rubber Center, with a total investment of 19.5 billion yuan. The project relies on the "Rubber Chain Cloud" industrial Internet platform first released in the rubber tire industry to build a rubber tire smart factory and supporting integrated projects. The key raw material "liquid gold" new material technology of the project comes from the "National Thirteenth Five-Year Science and Technology Support Project". The main product of the project is the high-performance radial tire based on the "liquid gold" new material, breaking the devil's triangle of tires.

Mainly construct projects with an annual output of 30 million sets of high-performance radial tires, 150,000 tons of off-road tires, 500,000 tons of functional new materials, and 30,000 tons of functional polyolefin new materials. After the project is completed and put into production, it is estimated that the annual output value will be 40.7 billion yuan, the profit will be 3.8 billion yuan, and the tax revenue will be 2.2 billion yuan. After the completion of the construction, the "liquid gold" technology will realize industrialization, and will successfully build a functional new material industrial park in the upstream and downstream of China's rubber tire industry chain and a world-leading rubber material industrial cluster.
