Currently, according to the International Association of Synthetic Rubber Producers (IISRP), Saudi Aramco's Arlanxeo has long been the world's largest producer of synthetic rubber.

In 2022, ARLANXEO was ranked as the world's largest synthetic rubber producer with a capacity of about 216.168 million mt/year, followed by China's Sinopec with an annual output of 129.<> million mt, and PetroChina in third place with an annual output of <>. <> million mt.

Next is the recently merged SIBUR/NKNH with an annual production of 128.103 million tonnes; Kumho Petrochemical (KKPC) has an annual output of 97.82 million tons; ExxonMobil produces 10,73 tons per year; and Synthos 68,63 tons/year. Also in the top <> are Goodyear, Versalis and ENEOS with capacities of <>,<> mt/year, <>,<> mt/year and <>,<> mt/year, respectively.

In the coming years, the International Association of Synthetic Rubber Producers expects China's capacity expansion to continue on a steep upward trajectory.

The IISRP estimates that global synthetic rubber production capacity in 2022 will be around 2100 million tonnes, with more than half coming from Asia, with 29% in China and 27% in the rest of Asia.

The EMEA (collectively known for Europe, Middle East and Africa) region is the second largest production region, accounting for 16% of global production capacity; followed by North America, with 15%; Russia accounts for 9%; In Latin America, it was 4 per cent.

According to IISRP, capacity in EMEA and the rest of Asia will also grow over the next 3 years, but at a much slower rate than in China.

By material type, global synthetic rubber production in 2022 mainly includes butadiene rubber, accounting for 22%; emulsion polystyrene-butadiene rubber, accounting for 20%; Styrene block copolymer, 17%; Dissolved styrene-butadiene rubber, 12%; EPDM and butyl rubber, both 10%; Nitrile rubber, accounting for 8%.
