Case no.:	SE0041
Company name:	Erdemir (Ereğli Demir ve Çelik Fab. T.A.Ş.) and its subsidiaries

Please complete this Annex in conjunction with the corresponding sections in the Questionnaire

The years relevant to this investigation are as follows:

Period of Investigation (POI)
1 April 2018 - 31 March 2023

The accounting currency is: **GBP (£)**

The unit for volume is: **Tonne (metric ton) (t)**

For all numerical figures, where appropriate, express every third number with a comma. (e.g. '1,300' for one-thousand three hundred, '1,300,000' for one million and three-hundred thousand)

Keep all sales/currency/income figures to two decimal places. (e.g. 1,300.00)

Where possible, keep all sales prices on a CIF value basis.

Display all dates in the format DD/MM/YYYY. (e.g. 23/05/2019)

In order to determine which sales fall within the investigation period, the invoice date should normally be used as the date of sale.

Note that there may be formulae already in the sheet

Cells containing formulae are highlighted in yellow:

Please do not overwrite these cells

Please do not leave blank spaces - if the requested information cannot be provided then enter N/A (for questions which require a text response) or 0 (for questions which require a numerical response)

The TRA will seek to authenticate the data provided in this questionnaire and the methodology used to compile it.

Please provide us with all formulas and steps used in your calculations and keep a record of these and all related material/documentation for the authentication visit.

Wheel or frame steels, one of the main components of the automotive industry, are used in the manufacture of wheel or frame parts due to their high strength and formability quality.</p> <p>General structural steels with ductility and toughness properties, and that are suitable for conventional welding processes are mainly used in the production of construction machinery, caterpillars, heavy plates for general construction, land and railway vehicles, storage tanks and containers.</p> <p>Hot rolled pipe grades are used for the production of pipes with high tensile strength, excellent toughness and weldability properties and that are used for the transport of gases/petroleum or fluid substances such as water or oil.</p> <p>High-pressure and temperature boiler steels are used in the manufacture of pressure vessels and boilers, pipes subjected to pressure and steam, industrial thermal vessels and heat exchangers, due to their excellent forming and weldability properties.</p> <p>Tube steels are used in the manufacture of LPG tubes, as they have a very good formability quality and excellent weldability and toughness properties.</p> <p>Medium and high tensile strength steels for shipbuilding with superior weldability and relevant toughness properties can be used for building ship interiors and keels.</p>	YES	YES	We may not comment. Even in terms of a generalized answer, the scope of the information requires extensive market research.	There are no differences between our goods subject to review or like goods and the like goods produced by UK industry in terms of physical, functional, commercial, quality.	No	YES
2. Non-alloy and other alloy cold-rolled sheet	72091500, 72091690, 72091790, 72091891, 72092500, 72092690, 72092790, 72092890, 72099020, 72099080, 72112320, 72112330, 72112380, 72112900, 72119020, 72119080, 72255020, 72255080, 72262000, 72269200	<p>Flat steel products in roll or sheet forms obtained by cold-rolling of hot-rolled flat steel, with thicknesses ranging from 0.20 to 2.00 mm. In addition to fully meeting the expectations with their properties concerning the surface flatness and the width and thickness variation, the physical properties of the produced materials fully remain homogenous along the roll all made very possible by the tandem cold-rolling mill.</p> <p>The steel grades for cold forming can be preferred in bending and deep drawing processes where toughness and ductile properties are required. These steels are mainly used in automotive components such as body panels, metal furniture, appliances, radiators, some profiles and ventilation equipments.</p> <p>Non-ageing extra deep-drawing steels (IF) are the best material to fulfill the automotive and white goods sector's special expectations, due to their superior formability and weldabilities.</p> <p>General Application Areas High strength low alloy steels, which combining good formability with improved weldability, having low content of carbon and produced by micro-alloying methods, are mainly used in automotive and its supplier industry Steels that are suitable for enameling by one/two layer or one/two firing has deep drawing properties and is therefore much preferred in the manufacture of kitchenware, such as pans, pots etc.</p> <p>Cold rolled coils or flat steel products are produced by rolling hot rolled flat steels without a heat treatment operation in a thickness range of 0.20 to 2.00mm.</p> <p>While the product's physical properties are all homogeneous along the strip, surface flatness, width and thickness values have fulfilled expectations at the top level.</p>	YES	YES	We may not comment. Even in terms of a generalized answer, the scope of the information requires extensive market research.	There are no differences between our goods subject to review or like goods and the like goods produced by UK industry in terms of physical, functional, commercial, quality.	No	YES

4. Metallic coated sheet	<p>72102000, 72104100, 72104900, 72106100, 7210690020, 7210690080, 72109080, 72122000, 72123000, 72125020, 72125030, 72125040, 72125061, 72125069, 72125090, 72259100, 72259200, 72259900, 72269910, 72269930, 72269970</p>	<p>Galvanized flat steel is produced by hot-dipping of cold-rolled metal through a zinc bath where both surfaces are coated with a layer of zinc. Subsequent to the process of zinc coating on the surface of the steel, by converting the interfacial layer into zinc-iron alloy through induction heating galvanized flat steel is produced. This process is applied in order to enhance material lifespan and prevent corrosion which will eventually occur on the material surfaces in the presence of water or air moisture.</p> <p>Therefore, galvanized materials produced through this coating process constitute the most significant input for automotive sector as well as sectors engaging in outer surface coating.</p> <p>Hot dip galvanized steels are continuously coated on both sides with a zinc layer by means of a continuous hot dip galvanizing process. After zinc layer created if induction heating is used to alloy the zinc coating with the steel to create a zinc iron coating, the product is galvanized steel.</p> <p>Galvanized products manufactured with this coating, which aims to prevent corrosion on material exposed to atmospheric ambience and to extend its life span, are an important input, particularly for the automotive industry and for sectors producing products for exterior surfaces.</p> <p>Zinc coating is protected through chromating and/or greasing of the surface. The surface grades of galvanized materials are produced at three different surface types (A, B, C strictly adhering to relevant international standards.</p> <p>General Application Areas</p> <p>The use of galvanized/galvannealed products in the automotive industry is growing because of the requirements for improved corrosion resistance and paint adherence. Most automotive manufacturers use galvanized products for both exterior and interior parts, enabling them to guarantee up to life time warranty against corrosion. Hot dip galvanized steels are used for various components of the car body</p> <p>Structural hot dip galvanized/galvannealed steels are used for a wide range of applications in the building sector. Depending on the atmospheric conditions, the steels, which need different coating thicknesses, are mainly used in cladding, roofs doors, fences, profiling and components for agricultural machinery applications.</p> <p>Galvanized steels which have been used for non-visible parts in domestic appliances are now also preferable for visible parts. Consequently, the steel materials used for domestic appliances are mainly galvanized steels.</p>	YES	YES	We may not comment. 6. Tin mill products	<p>72091899, 72105000, 72121090, 72101100, 72107010, 72124020, 72101220, 72109040, 72101280, 72121010</p>	<p>Electrolytic tinplate is a material that is cold rolled, low carbon, mild flat steels produced by electrolytically chrome or tin coating in a thickness range of 0.12 to 0.60mm in coils or sheets; Mostly utilized in metal packaging industry for the manufacturing of diverse industrial goods such as; cans of industrial grease, dyes and other chemicals, tins or cans composed of two to three pieces, cans of tomato paste, butter and cheese, soft drink cans, jars, crown/soft drink lids, ring-pulls, aerosol cans, decorative boxes, toys, and stationary materials.</p> <p>Tinplate and tin free steels are produced after the following production steps:</p> <ul style="list-style-type: none"> <li>• Pickling: This operation is for the removal of oxide layer formed during hot rolling, in an acid bath at 80°C.</li> <li>• Cold Rolling: The process consists of reducing thickness of hot rolled and pickled coils to desired thickness in several passes.</li> <li>• Cleaning: This operation is for removal of any impurities and lubricant residues by means of passing the strip through an alkaline bath</li> <li>• Annealing: During cold rolling internal stress emerges. In order to relieve this stress, the material is heated up to a temperature level over the recrystallization point within a reductive (corrosion preventive) atmosphere and then cooled. There are two kinds of annealing, one of these being "batch" and the other being "continuous".</li> <li>• Tempering: The material is being gradually reduced, in order to provide it the desired hardness, surface condition and quality and mechanical properties. There is also a secondary cold rolling operation applicable at the temper line which is necessary for the production of DR tinplates</li> <li>• Coating: The blackplate is passed continuously through a cleaning, electrolytic pickling, electro-deposition of tin or chromium, induction-melting for tinplate, passivation and oiling procedures. The final product is either a tinplate or a tin free steel. Erdemir produces both single(SR) and double reduced(DR) tin plates. Erdemir's tin free steel is produced mainly single reduced.</li> </ul> <p>Single Reduced (SR) Tinplate: This type of tinplate is produced by the steel coils being reduced to their ultimate thicknesses at the tandem rolling mill in one rolling operation and then afterwards being annealed, tempered and then tin or chrome coated.</p> <p>Double Reduced (DR) Tinplate: This type of tinplate is produced by, after being reduced and annealed, the steel being 10-30% reduced (instead of being temper milled) and cold rolled for a second time and then finally tin coated.</p>	YES	YES	We may not comment.
