

23rd January 2026

Tariff Rate Quota (TRQ) review No. TQ0077  
TRQ Review – Aluzinc, Aluminised flat steel, and Quarto plate (Category 4 and 7)

To whom it may concern,

We note with interest that within your tariff rate quota review (TQ0077) published on 14th Jan 2026, the steel items listed are not manufactured and have no viable substitute material production in the United Kingdom.

There is no domestic 'like product' in the sense defined under WTO rules, meaning import cannot cause injury to UK producers, which we understand is a precondition for safeguarding.

The subject items (Aluminised steel, Aluzinc steel, Quarto steel plates – 2050mm width and above) have specific and unique application which cannot be replaced.

It is essential for British manufacturing and consumers that the subject commodity codes listed below are not restricted by trade measures and should be removed from safeguarding measures.
